

British Gift for Cancer Research

The British Government has given £45,000 to the International Agency for Research on Cancer (I.A.R.C.) in Lyons, France. The donation is to be used for a mass spectrometer which will measure cancer-producing substances in food and will be housed in a new I.A.R.C. building which is a gift from the French authorities. The new spectrometer will play a part in the I.A.R.C. programme to identify the causes of cancer existing in the human environment.

Corrections

Cardiac Arrhythmias during Laparoscopy

In the letter by Dr. Nanette L. M. Gordon and others (4 March, p. 625) we regret that owing to a printer's error the third line of the fifth paragraph was incorrectly printed. It should have read "Mean PaO_2 was 135 mm Hg, the lowest being 101 mm Hg."

Resistance to β -Adrenoceptor Stimulants

In the letter by Drs. D. Jack and D. Harris (11 March, p. 688) we regret that the second line of the second paragraph was inadvertently omitted. The paragraph should open "The hypothesis of Conolly *et al.*,¹ which stimulated your warning, depends on their finding desensitization of β -adrenoreceptors in animals and man . . ."
