### ANNUAL MUSEUM.

The sixteenth annual exhibition of objects of interest in connection with medicine, surgery, and their allied sciences will take place in the Music Hall, Worcester, during the second week of August, 1882. The floor-space of this building amounts to 4,000 square feet. The Committee appointed to take charge of the arrangements for this Museum will be glad to receive—1. Pathological specimens (wet or dry); 2. Drawings or diagrams illustrating disease; 3. Casts or models; 4. Surgical instruments and appliances; 5. Microscopic preparations; 6. Microscopes, thermometers, and other instruments of investigation; 7. Preparations, diagrams, etc., relating to investigations in anatomy and physiology; 8. New drugs, chemicals, pharmaceutical preparations, and dietetics; 9. Sanitary appliances, including drawings or models illustrating the ventilation of hospitals or private dwellings;

10. New medical books. It is intended that the surgical instruments, sanitary appliances, etc., shall be *bonâ fide* novelties, or improvements on those in common use. The pathological specimens will be arranged in departments.

*Exhibition of Instruments and Apparatus.*—It is intended to arrange for the exhibition of complete series of instruments, electro-therapeutic apparatus, instruments for physical diagnosis, and appliances relating to sanitary science and public health. Facilities will also be afforded, when requested, for the display of instruments in action, or for special explanation by the exhibitors of apparatus, etc.

*The Catalogue.*—It is intended to print a catalogue, which will be as complete as circumstances may permit. The Committee earnestly request those who intend to exhibit to bear in mind that it is impossible that descriptions, etc., can be included in the catalogue unless sent in early. They should be received at least a month before the meeting, that is, not later than July 8th.

Communications, objects intended for exhibition, etc., to be addressed to the Secretary of the Museum Committee, Mr. J. RANDLE BUCK, 26, Sidbury, Worcester. During the week preceding the meeting all articles should be sent direct to the Music Hall, Worcester, and addressed to the care of the Curator of the Museum of the British Medical Association.

FRANCIS FOWKE, *General Secretary.*

### SOUTH MIDLAND BRANCH: ANNUAL MEETING.

The twenty-seventh annual meeting of this Branch was held at the General Infirmary, Northampton, on Thursday, June 1st, at half-past two o'clock. Previously to the meeting, the members were entertained at an excellent luncheon at the residence of the President, C. J. EVANS, Esq. Twenty-nine members and one visitor were present.

*New Members.*—The following new members were elected: H. H. Tidswell, Esq., and J. Oswald Lane, M.B., Northampton Infirmary; Harry W. Smith, Esq., Northampton; Chas. Hedley, Esq., Welford; John Waugh, M.B., Toddington.

*President's Address.*—The PRESIDENT then read a very able address, referring to the loss the profession had sustained from the death of several eminent men, as Sir Robert Christison, etc. He also referred to homeopathy in relation to the regular profession; likewise to the Collective Committee for the Investigation of Diseases.

*A Case of Distress.*—Mr. HENRY TERRY brought forward the case of Mr. Knott of Blisworth, who, owing to his advanced age and failing eyesight, was unable to carry on the duties of his profession. He was also unfortunate in the disposal of his practice, and at the present time was in straitened circumstances. A subscription-list was sent round the room, and a considerable sum was promised.

*The BRITISH MEDICAL JOURNAL.*—The PRESIDENT read a communication, which had been received by the honorary secretary from the Staffordshire Branch, as follows: "Wolverhampton, May 29th, 1882. Dear Sir,—At the last meeting of this Branch, held at Wolverhampton, May 25th, the following resolution was unanimously passed: 'That, in the opinion of this Branch, the JOURNAL of the Association should be more fully the medium of record of the transactions of the Branches of the Association than it is, and that the papers read and the records of clinical observations should have precedence of other contributions to the JOURNAL; moreover, that they should be more fully reported, and be published at an earlier period after communication than has hitherto been done.' I am directed to ask you to lay the resolution before your Branch at the earliest opportunity.—I am, yours faithfully, VINCENT JACKSON, General Secretary."—It was proposed by Dr. FRANK BUSZARD, seconded by Dr. J. M. BRYAN, and carried unanimously, "That the resolution passed by the Staffordshire Branch meets with the approval of this meeting, and that the fact be communicated to the Staffordshire Branch, and also to the JOURNAL."

*Collective Investigation.*—A letter to the honorary secretary, from Dr. Mahomed, was read by the President, in reference to the appointment of a subcommittee and honorary secretary in connection with this Branch, to carry out the work of collective investigation of disease.—It was proposed by Mr. H. ROGERS (ex-President), seconded by Dr. BUSZARD, and resolved: "That this Branch approves of the formation of a Committee, and refers the selection of members to the Committee of Management of the Branch."

*Papers.*—The following papers were read:

1. Dr. Newman: Heart-Disease.
2. Mr. R. H. Kinsey: Sarcoma of the Femur.
3. Mr. W. H. Bull: Case of Splenic Abscess, with fatal result from Perforation of the Stomach (specimen and drawing exhibited).
4. Mr. G. F. Kirby Smith and G. H. Percival, M.B.: Cases of Excision of Knee and Elbow Joints; and two Cases of Osteotomy (exhibited).
5. Mr. G. Harday: Case of Large Tumour filling the Mouth.
6. Dr. James More: Accouchement Forcé.
7. Mr. W. Kennedy: Two Cases of Puerperal Septicæmia.
8. Dr. A. H. Jones: Skin-Eruptions with Acute Rheumatism.

Discussions followed several of the papers.

*A Vote of Thanks* to the President for his very able address was moved by Dr. J. M. BRYAN, and seconded by Mr. R. W. WATKINS. A similar vote was carried with respect to the authors of papers.

*Thanks to Officers.*—It was moved by Dr. WM. W. CLARK, seconded by Mr. W. H. MASTERS, and resolved, "That the thanks of the members of the Branch be given to the officers, particularly to the honorary secretary and treasurer."

Coffee was then served, and the members separated at 5.30, after a very agreeable and successful meeting.

*Forthcoming Meetings.*—The autumnal meeting is to be held at Kettering, in September next: and next year, in the early summer, a combined meeting of the Cambridgeshire and Huntingdonshire and South Midland Branches is proposed to be held at Bedford.

## MEDICO-PARLIAMENTARY.

### HOUSE OF LORDS.—Friday, June 23rd.

*Rivers Conservancy Bill.*—The Earl of SANDWICH asked what were the intentions of the Government with regard to this Bill? The longer legislation was postponed, the more did the country suffer, and the greater became the evil calling for a remedy.—Lord CARRINGTON said he was instructed to inform the noble lord that it was the hope of the Government that the Bill might be passed into law this session.

The Public Health (Fruit-Pickers' Lodgings) Bill, and the Local Government Provisional Order (Artisans and Labourers' Dwellings) Bill, were read a third time, and passed.

### HOUSE OF COMMONS.—Thursday, June 22nd.

*Artificial Cheese.*—Mr. DODSON, replying to Mr. MACFARLANE, said the Government could not take any steps to protect the public from the sale of "Cheddar" and other cheeses which were composed of skimmed milk and various fats, but which were wholesome and nutritious. If articles were sold to the prejudice of the purchaser without notification as to the character of the food, proceedings could be taken against the vendor under the Food and Drugs Act.

The following private Bills were read a third time: The Accrington Improvement Bill, the Blackburn Improvement Bill, the Bolton Improvement Bill, the Chadderton Improvement Bill, the Dundee Police

shows signs of prevalence, no less than 89 cases having come under the notice of Dr. Wallace. A rigid inquiry into the cause of the renewed prevalence led to discovery of an infected milk supply, the particulars of which have already been dealt with in our columns.

## BIRTHS, MARRIAGES, AND DEATHS.

*The charge for inserting announcements of Births, Marriages, and Deaths 3s. 6d., which should be forwarded in stamps with the announcements.*

### BIRTH.

**JOHNSTON.**—On the 26th inst., at 2, Melbourne Street, Leicester, the wife of William Johnston, Esq., M.D., of a daughter (Kathleen Ada).

**INTERNAL ADMINISTRATION OF CHRYSOPHANIC ACID.**—The external use of chrysophanic acid is now well known. Its internal use is, however, a novelty, but one which appears to promise good results. At the meeting of the Glasgow Medico-Chirurgical Society on April 7th, Dr. Napier showed two cases of psoriasis which had been treated by the internal administration of chrysophanic acid. The initial dose was one-eighth of a grain of the acid rubbed up with sugar of milk, and was gradually increased. The result in both cases was very good, and he believed that this was the first time that this acid had been used in this way. The advantage of this method was, that the remedy might be employed internally where it was too irritating to be applied externally. In the discussion which ensued, Dr. Charteris said that Dr. Napier's cases were a further proof of the fact that chrysophanic acid acted as much by being absorbed as by any local effect which it had on the affected skin. Dr. Stevens thought that, where it could be tolerated by the skin, the acid was as likely to do good by external as by internal use, because then it would act generally by absorption, and locally by directly influencing the affected area. The cases are fully described in a paper by Dr. Napier published in the *Glasgow Medical Journal* for June. Dr. Napier thinks that he has shown for the first time that, in certain cases, psoriasis may be cured by the use of chrysophanic acid internally; that the belief that the drug has a general as well as a local action is well founded; and that the acid is capable of being absorbed when taken internally, and of exercising a special influence on the skin after absorption.

**HEALTH OF FOREIGN CITIES.**—The following statistics, derived from a table in the Registrar-General's last weekly return, afford trustworthy indications of the recent health and sanitary condition of various foreign and colonial cities. In the three principal Indian cities—Calcutta, Bombay, and Madras—the annual death-rate averaged 27.2 per 1000; cholera caused 73 deaths in Calcutta, measles 17 in Bombay, and small-pox 10 in Madras. In Alexandria, the deaths were equal to an annual rate of 46.3 per 1000, and included 10 caused by wounds and fractures in the riots of the 11th ultimo; 9 deaths from enteric fever, and 22 from diarrhoeal diseases, were also recorded. The annual death-rate in twenty-three European cities, according to the most recent weekly returns, was equal to 29.4 per 1000 of their aggregate population; showing, as usual, a marked excess upon the average rate in twenty-eight of the largest English towns, which was last week but 19.1 per 1000. The rate in St. Petersburg was 48.4, and showed a further slight improvement upon the very high rates recorded in that city in recent weeks. In three other Northern cities—Copenhagen, Stockholm, and Christiania—the death-rate averaged but 24.4, the highest rate being 28.2 in Copenhagen, where 6 deaths from scarlet fever and 4 from measles were registered. In Paris, the death-rate, which had declined from 26.9 to 23.4 in the four preceding weeks, rose last week to 25.6; 22 deaths were referred to small-pox, and no fewer than 52 to typhoid fever. The deaths in Brussels were equal to 20.7 per 1000, and included 8 from small-pox, against 4 and 7 in the two previous weeks. The rate in Geneva was 18.0, and showed a considerable decline from the high rate in the preceding week. In the three principal Dutch cities—Amsterdam, Rotterdam, and the Hague—the death-rates averaged 24.4 per 1000, and ranged from 20.2 in the Hague to 25.8 in Amsterdam, where 12 deaths from measles were reported. The Registrar-General's table includes nine German and Austrian cities, in which the death-rate averaged 30.0, and ranged from 21.3 and 25.5 in Trieste and Hamburg, to 35.3 in Munich and 37.3 in Buda-Pesth. Diphtheria caused 40 deaths in Berlin, and small-pox 23 deaths in Vienna and 10 in Buda-Pesth. In the four large Italian cities, the death-rate averaged 31.9 per 1000, and ranged from 28.8 in Turin to 35.9 in Naples; measles caused 15 deaths in Turin, and the 7 deaths from this disease in Rome showed a marked decline from the high numbers returned in previous weeks. Scarlet fever caused 8 and typhoid fever 8 deaths in Naples. In four of the principal American cities the death-rate averaged 24.8; it was equal to 20.4 in Philadelphia, 25.1 in Brooklyn, 23.2 in Baltimore, and 29.7 in New York. Scarlet fever caused 48 deaths in New York and 22 in Brooklyn; typhoid fever 15 deaths in Philadelphia; and diphtheria 9 in Baltimore.

**PAUPER INTERMENTS.**—A circular has been recently issued by the Local Government Board on the subject of the arrangements for the disposition and burial of the bodies of poor persons dying in workhouses. Cases have recently occurred where, in consequence of the defective nature of these arrangements, and the want of proper supervision on the part of the workhouse officers, much scandal has arisen from the burial of the body of a pauper under a wrong name, or in the interment taking place elsewhere than in the appropriate cemetery, or in the performance of a burial service over a coffin not containing a body. The board recommend that the mortuary should be devoted exclusively to the purpose for which it is designed, and that it should never be placed under the care of pauper inmates without frequent and systematic inspection. In order that there may be no mistake as to identity, there should be affixed to the shroud immediately after the laying out of the body, two eligibly written tickets, each bearing the name of the deceased—the one to be placed upon the outside of the coffin, and the other to remain attached to the shroud. Moreover, the Board are of opinion that each body, after it is placed in the coffin, but before the coffin is closed, should be inspected by the master of the workhouse, accompanied by the nurse or other subordinate officer who knew the deceased person when living, and who would be able to identify the body. Further, it is recommended that care be taken that a proper coffin-plate—giving the age, name, and date of the death of the deceased—should be affixed to the lid of each coffin before it is closed, and that this plate ought not, under any circumstances, to be removed. When a coffin-plate cannot be conveniently provided, the particulars referred to may be inscribed in suitable letters on the coffin itself. Whilst the above precautions seem proper in all cases, the Board think that they are especially needful in workhouses of considerable size, where it frequently happens that several bodies are in the mortuary at the same time awaiting interment, and where, therefore, unless due care is taken, confusion is liable to occur. In conclusion, the Board remind the guardians of unions from whence the unclaimed bodies of paupers dying in the workhouse are sent to a hospital or medical school, that the provisions of the Anatomy Act should in all such cases be most strictly complied with.
