

Health education in schools

"As long ago as the codification of the Mosaic law the individual's need for personal hygiene has been recognised," comments a new report from the Department of Education and Science, *Health Education in Schools*. Today health education must range widely, helping young people as they grow up, the report says, to minimise the risks of diseases and injuries caused wholly or partly by ignorance and by harmful habits and ways of living. The book, published by HMSO at £2.50, gives the background to many aspects of health education and some of the problems schools have to deal with. It includes chapters on accidents, dental health, sex education, the misuse of drugs and alcohol, and smoking, as well as the wider problems of communicable diseases, pollution, and toxic materials.

People in the news

Dr C G Barnes, a consultant rheumatologist at the London Hospital Medical College, has been elected chairman of the Arthritis and Rheumatism Council's executive and finance committee. He succeeds Dr R M Mason.

Professor W A Gillespie has been appointed emeritus professor in clinical bacteriology of the University of Bristol.

Dr John Vane, group research and development director of the Wellcome Foundation Ltd, shared the Albert Lasker basic medical research award, presented in New York last month, with Dr S Bergstrom and Dr B Samuelson (Sweden) for work on prostaglandins.
