

quiet, and he complained of nothing more than a slight aching in the knee.

An anodyne was given at bed-time, for a few nights, aperients occasionally exhibited, and the poultices continued until granulations began to rise, when the piece of the patella was removed, and the surface dressed with lint dipped in oil, whilst slips of adhesive plaster were employed to approximate the edges of the wound.

On the 21st January, 1839, the wound was healed, and the gentleman was so recovered as to be able to dress himself, and sit up in a chair. In March, he rode on horseback six miles to the house of Mr. Ward.

He has remained well to the present time, and has long thrown aside the splint and bandage, which he wore for some time after rising from bed. Mr. E. M.— can walk without a stick, dance, or run without much inconvenience.

Mr. Cooper observes, in reference to this case, that there is no kind of injuries the treatment of which is so likely to be improved as those of the joints. It is no longer deemed indispensable to sacrifice the limb; and it would seem that the same danger is not to be apprehended from wide as from small and punctured wounds.

### MISCELLANEOUS FOREIGN INTELLIGENCE.

#### NEW MODE OF TREATING TUMEFACTION OF THE SPLEEN, WITH OR WITHOUT INTERMITTENT FEVER, OR DROPSY.

Dr. VOISIN, of Limoges, affirms that he has cured eight or ten cases of enlarged spleen, as also the ascites and icteric tint of the skin consequent to that affection, by means of a mercurial plaster (*vigo cum mercurio*), with six or eight grains of sulphate of quinine applied to the region of the spleen. The plaster is to be renewed every forty or fifty days. In three or four cases treated by this eminent practitioner, the diseased organ occupied about two thirds of the left half of the abdomen. The doctor adds that the deuto-sulphate of iron, taken in *the same dose as sulphate of quinine*, when the latter is administered internally, is equally efficacious with it in the cure of intermittent fever. The fault, in the administration of the sulphate of iron, is the too small dose in which it is generally prescribed.

#### THE NECK OF THE UTERUS, AND NOT THE VAGINA, THE SEAT OF THE BLENNORRHOIC DISCHARGE IN FEMALES.

The *meatus urinarius* is unquestionably one of the seats, but Dr. Gibert, recently the physician of the Female Venereal Hospital, says that in every case where he has used the speculum, he has perceived a discharge from the uterus coexistent with that of the *meatus urinarius*; and as the uterine discharge continues after the urethral, the doctor considers the neck of the uterus as the principal source of the blennorrhagic flux. In the greater number of cases the vagina has no part in the secretion of the discharge. On the other hand, in every case the urethral and uterine fluxes coexist. In 216 patients observed in the wards of l'Ourcine, only 40 had vaginal affection of any kind, and from this number must be deducted several instances where redness was the only symptom, and which was promptly subdued. Hence the term *vaginite* for blennorrhagia is evidently unfounded. The affection of the vagina may possibly be the result of accidental and secondary irritation.

#### INJECTIONS INTO THE CAVITY OF THE UTERUS.

The French medical press contains a polemic on this subject, which, in the year 1832, formed the matter of an essay, published in the records of the Academy of Medicine. The opponents of the practice adduce instances of extreme pain in the loins having been produced by it, which have been accompanied by fever, so as to lead to a presumption of inflammation of the Fallopian tubes in some cases, and of the ovaria in others. M. Leroy d'Etiolles gives a case in which acute pain was instantly produced in one of the flanks, with rapid enlargement of the ovum on the affected side, and a degree of tympany which that author never met with in any other disease. No pain was produced by pressure, which would serve to distinguish

this affection from peritonitis. Dr. Vidal, of the Female Venereal Hospital de l'Ourcine, considers interior uterine injections to be not only a useful remedy, but free from the inconvenience above stated, if gradually introduced by means of a canula, which, by not filling up the orifice, would suffer the liquid to escape after having washed the sides of the uterus. The opposing party contend that this gradual injection does not wash away the tenacious mucus, which it is often important to detach.

### A COURT APPOINTMENT.

M. GUERSANT, physician to the *Children's Hospital*, Paris, has been lately appointed consulting physician to the king of the French. Is his majesty, Louis Philippe, already making preparation for his second childhood?

### JONES'S COMPARATIVE ANATOMY.

Recently Published, Price 2s. 6d., Part XII., containing 28 Illustrations, of

**A GENERAL OUTLINE OF THE ANIMAL KINGDOM, and MANUAL OF COMPARATIVE ANATOMY.** By THOMAS RYMER JONES, Professor of Comparative Anatomy in King's College, London.

This work will comprise, in one volume, the structure and economy of every class of living beings, and their adaptation to the circumstances in which they are severally destined to exist. The principles of zoological arrangement will be developed, and, in order to render the work as intelligible as possible to unscientific readers, a glossary of technical terms will be supplied in the concluding part.

"This work was much wanted, particularly by the younger members of the profession, whose attention we strongly direct to it."—*Medico-Chirurgical Review*.

John Van Voorst, 1, Paternoster-row.

### BOOKS RECEIVED.

Observations on the Surgical Practice of Paris. Illustrated by Cases. Being a Thesis, to which a gold medal was assigned by the Senatus Academicus of the Edinburgh University, at the Graduation of 1840. By W. O. MARKHAM, M.D. London: Highley. 1840. 8vo. Pp. 114.

[We shall make frequent extracts from this interesting Thesis.]

Elements of Natural Philosophy, &c. By GOLDING BIRD, M.D. London: Churchill. 1839. 8vo. Pp. 400.

A Treatise on the Diseases of the Eye and its Appendages. By RICHARD MIDDLEMORE, Surgeon to the Birmingham Eye Infirmary, &c. Longman and Co. London, 1835.

[We take this opportunity of stating, that one of the most distinguished ophthalmological professors in the provinces has undertaken to review for us all works on diseases of the eye, &c.]

Practical Remarks on the Discrimination and Appearances of Surgical Disease, &c. By JOHN HOWSHIP, Surgeon to the Charing-cross Hospital. Churchill, London, 1840. 8vo. Pp. 400.

A Letter to Sir B. C. Brodie, containing a Critical Inquiry into his "Lectures Illustrative of certain Nervous Affections." By WILLIAM GOODLAD, M.R.C.S. &c. Longman and Co. London, 1840. 8vo. Pp. 154.

Practical Observations on the Causes and Treatment of Curvatures of the Spine, &c. By SAMUEL HARE. Simpkin and Marshall, London, 1838. 8vo. Pp. 152.

On the Nature and Treatment of Stomach and Urinary Diseases, &c. By WILLIAM PROUT, M.D. Third Edition. Churchill, London, 1840. 8vo. Pp. 483.

A Practical Treatise on the Cure of Strabismus, or Squint, by Operation, and by Milder Treatment. With Plates. By P. BENNETT LUCAS. Highley, London, 1840. 8vo. Pp. 90.

Printed by RICHARD CLAY, of No. 5, Newmarket Terrace, Cambridge Heath, in the County of Middlesex, at his Printing-office, Nos. 7 and 8, Bread-street Hill, in the Parish of St. Nicholas Olave, in the City of London; and published by WILLIAM BALL, of 34, Paternoster Row, in the City of London, at No. 34, Paternoster Row.—Saturday, Oct. 17, 1840.

**MR. LUCAS ON SQUINTING.**

Just Published. Price 6s.

**MR. P. BENNETT LUCAS**, on the NATURE of STRABISMUS or SQUINT; its Treatment by Operation and by Milder Measures. With numerous Cases and Plates. S. Highley, Fleet Street.

This day is published, in fcap. 8vo. price 2s., cloth.

**A COMPENDIUM OF MATERIA MEDICA, PHARMACY, and TOXICOLOGY.** Containing:—1st. Tables of the MATERIA MEDICA. 2nd. The CHEMICAL DECOMPOSITIONS of the London Pharmacopœia. 3rd. TOXICOLOGICAL TABLES, as also the Antidotes and Tests. For the Use of Medical Students. By D. SPILLAN, M.D.

London: G. Henderson, 2, Old Bailey.

**GOLD LABELS.**

A NEW SET, ENGRAVED IN EGYPTIAN LETTER, FOR BOTTLES, DRAWERS, &c.

**H. SILVERLOCK** begs to inform his Friends, that these Labels are now ready, and that Catalogues, with a sketch of the Sizes and Pattern, may be had on application at 3, WARDROBE TERRACE, through any of the Wholesale Chemists, or per Post.

This splendid Set of Labels, the most extensive and complete ever published, contains SEVEN SIZES, for Bottles, from the smallest size in use to the largest; also THREE SIZES Straight Labels for Drawers, and THREE SIZES Straight Labels with Ornamental Ends for Drawers. The Prices vary according to the sizes, from 3s. per dozen. Address

**H. SILVERLOCK,**

MEDICAL PRINTING OFFICE, and LABEL WAREHOUSE, WARDROBE TERRACE, DOCTORS' COMMONS,

Where may be had every description of LABELS ready GUMMED and CUT, for the use of Surgeons, Apothecaries, wholesale and retail Chemists, Druggists, &c., also Fancy Labels, in great variety. Ornamental Labels for Bottles and Drawers on Gold, Green, or Yellow Paper; this set is Engraved in a superior manner, in THREE SIZES, with the new names, according to the last Pharmacopœia. Sold in Books or Single Labels as under:—

Single Labels.	Yellow or Green.	Gold.
	Per doz.	Per doz.
Small and Middle Sizes .....	1s. 6d.	2s.
Large .....	1s. 6d.	5s.
In Books, Green or Yellow.		
Small Size, containing 1036 Labels .....		0 17 0
Middle Size, " 1159 Ditto .....		1 5 0
Large Size, " 855 Ditto .....		1 14 0
The Three Sizes in One Book, containing 3008 Labels .....		3 10 0

CATALOGUES GRATIS.

ENGRAVING AND PRINTING OF EVERY DESCRIPTION.

**A TREATISE ON INFLAMMATION.**

By JAMES MACARTNEY, M.D., F.R.S. With Two Plates, 4to. 15s.

"It is unnecessary to point out the great practical results which must flow, and have already flowed, from the correction of errors so closely bearing on the treatment of wounds and injuries."—*Dublin Journal of Medical Science*, September, 1835.

"In conclusion, we do not hesitate to pronounce the 'Treatise' of Dr. Macartney, to be the most original medical work which has appeared since the days of John Hunter."—*Lancet*, November 10th, 1835.

"Our readers must perceive that our limits do not permit us to go to the length this highly-interesting volume deserves. It is impossible to do justice to do it in a brief notice. It must be read throughout to enable the practitioner to appreciate its value."—*Dublin Medical Press*, March 6th, 1839.

"In so far, therefore, as he has been instrumental in thus alleviating human suffering, he well deserves the gratitude not only of the profession, in whose science he has made an important advance, but of mankind at large."—*British and Foreign Medical Review*, April, 1839.

"In the views which he has presented on this and other subjects of which he treats, and in the practice founded upon them, he has given an important impulse to Modern Surgery, and in particular to the doctrines of Hunter, which he has followed out in a lucid and satisfactory manner."—*Edinburgh Medical and Surgical Journal*, April, 1839.

"But Dr. Macartney's reputation will secure that notice which might otherwise be denied, and command a full audience and respectful attention whenever he addresses the profession. We may be satisfied that we shall meet with ingenuity and originality; and whether we are convinced or not, we are certain of pleasure and instruction."—*Medico-Chirurgical Review*, January, 1839.

"Indeed, the great merit of this valuable Treatise is, that it is so eminently practical. It abounds in original observations of facts; and the whole subject is arranged in most lucid order, and treated in a style remarkable for simplicity and clearness."—*Retrospective Address by Dr. Madden at the meeting of the Provincial Medical and Surgical Association of England*, July 18th, 1838.

London: Longman, Orme, Brown, Green, and Longman.

**ESTABLISHED 1760.**

**BLACKWELL, SURGEONS' INSTRUMENT MAKER** and CUTLER, invites inspection of his STOCK, consisting of Dissecting, Pocket, Surgeons', and other Instruments, Stomach Pumps, Enemas, Table and Fine Cutlery, of superior manufacture.

Dissecting Cases from 15s., and a variety of Surgeons' Amputating Cases (some second-hand) at very moderate prices.

BLACKWELL is the Patentee of the Inimitable Curling Comb.

Manufactory, 3, BEDFORD COURT, Covent Garden, London.

**SCHOOL OF ANATOMY, MEDICINE, &c.**  
27, PETER STREET, DUBLIN.

THE WINTER SESSION will COMMENCE on MONDAY, the 2d of November.

ANATOMY and PHYSIOLOGY—MR. MADDEN.

DEMONSTRATIONS and PRACTICAL ANATOMY—MR. BURKE, MR. PALMER.

MATERIA MEDICA and THERAPEUTICS—MR. CULLEN.

MIDWIFERY—Messrs. CARMICHAEL and JAMESON.

Particulars known on application to Mr. Madden, 50, Marlborough-street, Dublin, or to Mr. Burke at the School.

**IMPORTANT IMPROVEMENTS.**

FOR EXPORTATION OR GENTLEMEN TRAVELLING.

**READ'S NEW PATENT DOMESTIC MACHINE**, containing two valves in one cylinder, which are warranted to keep in repair, are patronized by the nobility, and acknowledged by the highest medical authorities as superior to all others. They are fitted with flexible tubes, that will stand the test of any chemicals, or the hottest climates. The above are more simple, portable, and durable than any other, most effectually excluding air. Manufactured and sold, wholesale and retail, by the patentee, 35, Regent-circus, Piccadilly, London. Sold also by Mr. W. H. Peppas, 22, Poultry; and may be had of the most respectable chemists in town and country.

N.B. None are genuine except stamped with the words "Read's Patent." A liberal discount allowed to the trade, and for exportation.

Just published, in 8vo. with Forty-one finished Wood-Engravings, 12s. Cloth Boards,

**A TREATISE on the NATURE of CLUB-FOOT** and ANALOGOUS DISTORTIONS; including their Treatment, both with and without Surgical Operation: illustrated by a Series of Cases, and numerous Practical Instructions. By W. J. LITTLE, M.D. Lecturer on the Practice of Medicine, and Assistant Physician at the London Hospital, &c. &c.

CONTENTS.—Opinions of Authors, Ancient and Modern, Varieties of Club-Foot, Symptoms, Anatomy, Pathology, Causes, Distortions from Teething, Contractions from Paralysis and Spasm, Hysterical Distortions, Club-Hand, Contraction from Fractures, Abscesses, Rheumatism, from long-continued Confinement, from Accidental Rupture of Tendo-Achillis; Medical, Surgical, and Mechanical Treatment of Distortions; Division of Tendons, Explanation of Safety of the Operation, Appendix of Cases, arising from various causes, Contraction of the Toes, Contraction of the Knee and Hip Joints, Cure of Anchylosis of the Knee from White Swelling.

"Dr. Little presents us with a great deal of matter possessing both novelty and interest. The drawings interspersed throughout the work, exhibiting the relative appearance of the various distortions, both before and after operation, are cleverly executed, and form a very valuable addition to his treatise."—*Brit. and Foreign Med. Rev.*

"Dr. Little's Treatise contains a most comprehensive and complete description of the causes, varieties, and treatment of club-foot. We recommend it to the attention of surgeons and heads of families."—*Lancet*.

"Dr. Little's Treatise will be consulted by every operator, and is unquestionably one of the most useful books of the season."—*London Medical Gazette*.

"This volume altogether is beyond question the best monograph, Foreign or English, upon the subject, containing, as it does, not only the opinions and practice of Continental writers, but the valuable additions made by Dr. Little to this branch of science."—*The Medical Times*.

"It only remains for us to express our good opinion of the manner in which Dr. Little has performed his task. His book will prove a very useful one, and we recommend it in strong terms to the profession."—*Medico-Chirurgical Review*.

London: W. Jeffs, 15, Burlington Arcade; S. Highley, Fleet-street.

**TO CORRESPONDENTS.**

We would feel obliged to our friends in the Provinces, who forward newspapers to us, if they would mark, by a cut, those paragraphs to which they desire to direct our attention.

Printed by RICHARD CLAY, of No. 5, Newmarket Terrace, Cambridge Heath, in the County of Middlesex, at his Printing-office, Nos. 7 and 8, Bread-street Hill, in the Parish of St. Nicholas Olave, in the City of London; and published by WILLIAM BALL, of No. 34, Paternoster Row, in the City of London, at No. 34, Paternoster Row.—Saturday, Oct. 17, 1840.
