description of BELT, invaluable for prevention of Rheumatism, Lumbago, etc. N.B. Every description of IN DIA-RUBBEB BANDAGE, vulcanized on the newest principle.

Directions for reasonable of the prevention of the newest principle.

Directions for measurement sent by post.—N.B. A liberal Discount to the Profession.

A female to attend on Ladies.

PULVIS JACOBI VER., NEWBERY'S.

To the Medical Profession of Great Britain and Ireland.

ENTLEMEN,-We beg to call your attention to the following extracts from a Paper by the late John Cheyne, M.D., F.R.S.E., M.R.I.A., Physician to the Hardwicke Fever Hospital, Dublin, and Physician-General to His late Majesty's Forces in Ireland, &c., &c., contained in "The Dublin Hospital Reports," vol. 1, p. 317.

"Since this case came into my possession, I have been led to make a good many clinical experiments, which have enabled me to verify the reports which I had heard of the efficacy of JAMES'S POWDER, in sometimes es removing the APOPLECTIC DIATHESIS in persons advanced in life. It is, moreover, worthy of observation, that * JAMES'S POWDER has been of remarkable utility in certain inftances of DETERMINATION OF BLOOD TO THE 44 HEAD, which occurred at an early period of life, and threatened to end by effusion. Lastly, in two cases of "GENERAL PLETHORA, in which, however, the head was more affected than any other part, JAMES'S POWDER was exhibited by me with perfect fuccess."

Also vol. 1, A 320.

"The following very simple method of exhibiting JAMES'S POWDER, in cases of undue determination of blood to the head, is that which I have generally pursued. The patient is made to begin with a very moderate dose, not more than two grains at bedtime, and to increase the dose by half-a-grain every night, until some sensible "effect is produced upon the stomach, bowels, or skin. Should the stomach be assected with sickness, the dose "must be lessened by one grain on the following night. By the addition of a little rhubaro to it a larger quantity of JAMES'S POWDER may be administered than the stomach could otherwise bear. If the skin is sostened, or the bowels assected, the dose should not surther be increased, but it must be repeated every night for a considerable 44 length of time: in feveral inftances I have known eighteen or twenty grains taken for a confiderable period without "any inconvenience."

The following extract (showing the increasing estimation in which the true Dr. James's Powder is held by Medical Practitioners) is taken from "The Lumleian Lectures," 1858-59, delivered before the Royal College of Physicians, by A. Tweedie, M.D., Physician to the London Fever Hospital, who is admittedly one of the highest bractical authorities on the subject of Fever. He fays (the Lancet, June 16, 1860, p. 590), as follows:-

"If the febrile excitement be such as to require antimonial preparations, a pill containing 2 or 3 grains of "Tames's Powder (prepared by Newbery) should be taken at intervals according to circumstances."

In writing to Messrs. Newbery, he says:-

"I wish that your preparation was always used."

To secure the dispensing of the original preparation, which, for 114 years, has been fold by the house of Newbery and Sons, in St. Paul's Churchyard, it is necessary to prescribe it as "Pulvis Jacobi Ver., Newbery's," otherwise another article (wanting in the best properties, and recommended to be given in a different code of dose, though called by the same name) may be substituted for the original medicine.

This substitution must bring disappointment, and of course deter Practitioners from prescribing Dr. James's Powder, or lead them to regard it as a preparation on which no dependence can be placed.

FRANCIS NEWBERY AND SONS.

45, St. Paul's Churchyard, London.
