Uric Acid as a Factor in the CAUSATION OF DISEASE. By ALEXANDER HAIG, M.D., F.R.C.P. Fourth Edition, much enlarged, with 65 Illustrations, 8vo, 15s. 6d.

J. & A. CHURCHILL, 7, Great Marlborough Street.

J. & A. CHURCHILL'S List is continued on page 5 of the Advertisement Sheet.

Maltine with Cod Liver Oil

The Perfection of.

COD LIVER OIL PREPARATIONS

Preferred by the Medical Profession to all others, as the result of Sixteen Years' Experience. "MALTINE" with Cod Liver Oil maintains its position in the favour of the Profession, because:—

(I.)—IT IS THOROUGHLY PALATABLE.

'MALTINE' was from the first recognised as a most suitable vehicle for the administration of nauseous drugs, and especially Cod Liver Oil. Constant experiment and progress have enabled us to fully utilize the advantages of 'MALTINE' in this respect, and 'MALTINE' with Cod Liver Oil is a product for which even the fastidious have nothing but praise.

(II.)—IT IS READILY ASSIMILABLE.

The success of our methods of exhibiting Cod Liver Oil depends as much upon this point as any other. Experience has abundantly proved that the desired effect is but seldom attained with the plain oil, the organism being generally unable to deal with so large an amount of pure fat. The various *Emulsions* prepared by chemical means are, in this respect, in no way superior to plain Cod Liver Oil, for they are at once disintegrated by acid. Consequently, they are broken up by the gastric secretions, the oil is liberated, and the difficulty of digesting plain oil *en masse* is again experienced.

These evils are removed satisfactorily in 'MALTINE' with Cod Liver Oil. It will be found that the oil is most minutely sub-divided—the division, indeed, being much finer than that of the fat in milk. The combination, too, being effected by purely mechanical means, is not broken up by acids, and 'MALTINE' with Cod Liver Oil is thus free from that fatal objection to Emulsions.

(III.)—POSSESSES HIGH NUTRITIVE POWER.

This will be readily appreciated when the constituents of our product are considered. In 'MALTINE' we have a powerful agent for the conversion of farinaceous food into soluble form, also a food rich in such principles as the carbo-hydrates (dextrine and maltose), the proteids, and the phosphates of lime and potash, derived from malting the choicest cereals. These principles, taken in conjunction with Cod Liver Oil in its most effective, because assimilable, form, constitute 'MALTINE' with Cod Liver Oil a most successful and reliable reconstructive agent, and explain its wide and constant employment by the Medical Profession.

In Prescribing please specify "MALTINE CO."

We shall be pleased to send Samples of any of our Preparations, free of charge, to Medical Men.

THE MALTINE MANUFACTURING CO., LTD.,
24 & 25, HART ST., BLOOMSBURY, LONDON.
