

# INTRAMINE

(The New Anti-syphilitic Remedy).

---

(Vide THE LANCET, Jan. 29, 1916, pages 236-239, and Feb. 5, 1916, page 297,  
also THE BRITISH MEDICAL JOURNAL, Feb. 5, 1916, page 202).

---

INTRAMINE is an organic amino compound of sulphur first prepared for therapeutic purposes, and tested both biologically and clinically, by Mr. J. E. R. McDONAGH, F.R.C.S.

INTRAMINE is administered by intramuscular injection, and for this purpose it is prepared in the form of a sterile permanent cream, which does not oxidise on exposure to air, and which is fluid at body temperature.

INTRAMINE is supplied in sealed ampoules, the contents of which measure 10 c.c., and contain 1 gram of pure Intramine which constitutes one adult dose. It may be obtained through any pharmacist.
