

# The MACKENZIE-LEWIS POLYGRAPH

An improved form of MACKENZIE  
POLYGRAPH designed by Sir T. LEWIS.

Among its advantages are:—

- (1) Lag and distortion of wave form are minimised by the construction of the tambours and receiving chambers.
- (2) The glycerine pelotte is used as the receiving chamber.
- (3) The paper passes in a direction which assists the ink to flow.
- (4) The instrument in its case is complete, ready for use, no connecting or disconnecting required.
