

Weight—14 lbs. Size—13" x 7" x 5½".

CAMBRIDGE PORTABLE CO₂ INDICATOR FOR ALVEOLAR AIR

The instrument is electrical in operation, requires no absorbents, is quick reading and simple to operate.

Calibration 0 — 10% CO₂

Further particulars on request.

After breathing out in the ordinary way the patient expels through a Katharometer the residue of the gas in the lungs which has been in actual contact with the blood system. The percentage of carbon dioxide is then read on the indicator. This percentage is a valuable guide to prognosis and treatment.
