

**PYREX**  
Regd Trade Mark. Brand.

**SCIENTIFIC GLASSWARE**

**possesses high  
Chemical Stability !**

In all laboratory work involving exacting chemical processes, it is essential that the glassware should withstand attacks from ordinary reagents, as well as extremes of heat and cold.

Because of its extremely low co-efficient of expansion (0.000032) PYREX brand Glassware can be made with heavier walls than ordinary glass, giving greater mechanical strength, which affords protection against constant rough and hurried handling.

PYREX brand Glassware is the laboratory glassware that most fully meets every requirement of daily usage in intricate chemical tests, thus minimising breakage losses and replacement expense. Moreover, chemists and scientists will find that, with average treatment, PYREX brand Glassware maintains, over a long period, the many vital and reliable characteristics which are claimed for it.

*PYREX Brand Scientific Glassware is supplied only through Laboratory Furnishers, but illustrated catalogue and two free copies of our Chemist's Notebook will be sent direct on application to us.*

T.7.A.

**Why don't they find**

**something better?**

They argue and ARGUE—blame this and that. Why don't they try ONAZOTE or RUBAZOTE? ONAZOTE Expanded Ebonite Compound and RUBAZOTE Resilient Expanded Rubber Compound are the lightest manufactured solids, have structural strength and the lowest thermal conductivity; are water and bacteria proof. They are superseding many materials for the manufacture of surgical apparatus, while RUBAZOTE is especially suitable for mattresses, cushions, and the like.

We are prepared to experiment free of charge to produce your articles in ONAZOTE or RUBAZOTE; to demonstrate that these materials are better from every point of view than those you now employ. Please write for fullest details of our offer.
