

THE RISE AND FALL OF pH 7.4

This figure denotes the normal reaction of the blood. A slight rise may mean alkalosis; any slight fall means acidosis.

When acidosis complicates disease, systemic alkalization becomes a valuable and needed adjunctive treatment. ALKA-ZANE accomplishes this efficiently and with desirable promptness, because it is composed of those minerals which constitute the alkali reserve: sodium, potassium, calcium and magnesium, in the form of citrates, carbonates and phosphates. No sulphates, lactates or tartrates, and no sodium chloride are present in Alka-Zane.

STOMACH DISORDERS

The acute discomfort of recurring 'indigestion,' the pain of flatulence and distension associated with acid dyspepsia, will yield to treatment with 'BiSoDoL'.

Antacid, sedative and mildly aperient, 'BiSoDoL' is a finely divided powder composed of the bases lithium, soda and magnesium, together with pepsin and diastase, which assist digestion. 'BiSoDoL' is flavoured with oil of peppermint, making the preparation acceptable to the most sensitive patient and, at the same time, providing a valuable carminative. Relief is experienced soon after the dose is taken.
