

THE THERAPY OF ASTHMA

The treatment of asthma resolves itself into a consideration of underlying factors and causes. Often in ASTHMA the underlying cause is not

discoverable or changes from time to time—now irritant dusts, now bacterial infection, etc. The underlying factor is fortunately always the same—bronchospasm.

Thus sometimes causative agents can be removed or mitigated but always the underlying factor—bronchospasm—can be treated, successfully, with FELSOL.

Most cases of Asthma are chronic and demand patience in treatment—persistence with FELSOL will yield the highest possible percentage of successes.

BREAKING A VICIOUS INNER CIRCLE

NEUTRALON constitutes a dependable corrective of gastric hyperacidity. The antacid action of NEUTRALON is essentially a buffer one. It does not produce a violent alkaline reaction such as produced by sodium bicarbonate, which leads to equally violent acid reaction. NEUTRALON also forms a coating over the inflamed gastric mucous membrane, protecting the actual area of ulceration from contact with the gastric acids. It also minimises the activity of the acid-producing cells. Thus NEUTRALON not only neutralises the acids but provides the walls of the stomach with mechanical protection

NEUTRALON

LITERATURE GLADLY SENT ON REQUEST

'Neutralon' is the registered name which distinguishes synthetic aluminium sodium silicate of British Schering manufacture.
