

OVERNIGHT EVACUANT

"There is a time for every purpose," and Nature has appointed the hours of night as the time for rest and recuperation. Making these hours coincide with the taking of an evacuant has sound psychologic as well as therapeutic justification if the medication does not interfere with the salutary effect of unbroken sleep. In the case of Agarol, the patient is hardly conscious of having taken an evacuant. There is no unpleasant after-taste, no griping; and there need be no fear of an untoward premature result, for Agarol acts with almost clock-like regularity, allowing eight hours from the time of taking to the time of evacuation. Agarol is a mineral oil emulsion with a small dose of phenolphthalein.

COMPOSITION: Mineral Oil, Glycerine and Phenolphthalein: a perfectly homogenized emulsion.

INSOMNIA ?

TAB
"ISOBROM"
indicated!

A NEW SEDATIVE AND HYPNOTIC

"ISOBROM" is a combination of bromisovalerylurea and bromethylbutylurea (carbromal) in equimolecular proportions. Though both bromisovalerylurea and carbromal have been used extensively for many years in Europe and America for their sedative and soporific qualities, the application of their combination is the result of new research. Recent clinical experiences have demonstrated conclusively that a remarkable synergistic enhancement of effect is obtained when the two drugs are administered in combination.

"ISOBROM" is a non-toxic sedative and hypnotic, and can be used for prolonged period without hepatic or renal impairment, or damage to the central nervous system.

THERE ARE NO KNOWN CONTRA-INDICATIONS

ACTION—"ISOBROM" induces sleep in 10-30 minutes. The effect lasts from 4-5 hours and is usually followed by natural sleep.

5 gr. Tabs. in bots. containing 25 & 100 tablets. For dispensing: 250, 500 and 1000 tablets.

This preparation is not advertised to the public.

Why ANDREWS is the Ideal Form of Laxative

Andrews is a pleasant tasting, effervescent aperient with tonic properties, and is a valuable aid to Inner Cleanliness.

Andrews is beneficial in most digestive disorders, feverish conditions, the ailments of children, and in pregnancy and lactation.

Andrews justifies the description of "The Ideal Form of Laxative" because:—

FIRST . . Patients like taking Andrews. It is pleasant-tasting. Its brisk effervescence is immediately refreshing and stimulating. It sweetens the mouth and helps to clean the tongue.

NEXT . . Andrews allays gastric discomfort, heartburn and nausea by diminishing the stomach's acidity and relieving flatulence.

THEN . . Andrews increases bile flow, relieves hepatic congestion and improves digestion. It is partly absorbed from the intestine as alkali, and therefore helps to correct acidity in the blood and to stimulate kidney function.

FINALLY . . Acting by osmosis, Andrews clears the bowels gently yet entirely without irritation.

Approx. active constituents:

Acid. Tart.	—	32% to 36%
Acid. Cit.	—	3% to 6%
Sod. Bicarb.	—	40% to 44%
Mag. Sulph.	—	17% to 21%
Other constituents	—	up to 1%
