

Announcing SULPHARSAN

brand of
Sulpharsphenamine
for intramuscular injection

Prepared and tested in accordance with the Therapeutic Substances Regulations 1931 under U.K. Manufacturing Licence No. 18

SULPHARSAN is a sodium salt of a methylenesulphurous acid derivative of 3 : 3'-diamino-4 : 4'-dihydroxyarsenobenzene. It consists mainly of a sodium salt of 3 : 3'-diamino-4 : 4'-dihydroxyarsenobenzene - NNN' - trimethylene-sulphurous acid and is a light yellow, free-flowing powder.

SULPHARSAN dissolves easily and completely in water, giving a solution nearly neutral in reaction. Such a solution causes no pain on injection and is well tolerated. It is unnecessary, therefore, to use special solvents for Sulpharsan.

Disappearance of spirochaetes within 48 hours and rapid normal healing of the lesions follow the use of this product.

Each batch is clinically tested before issue.

Approved by the Minister of Health for the purposes of the Public Health (Venereal Diseases) Regulations, 1916.

Issued in ampoules of 0.15 : 0.3 : 0.45 : 0.6 grm.

For further particulars apply to :

THE THERAPY OF ASTHMA

The treatment of asthma resolves itself into a consideration of underlying factors and causes. Often in ASTHMA the underlying cause is not

discoverable or changes from time to time—now irritant dusts, now bacterial infection, etc. The underlying factor is fortunately always the same—bronchospasm.

Thus sometimes causative agents can be removed or mitigated but always the underlying factor—bronchospasm—can be treated, successfully, with FELSOL.

Most cases of Asthma are chronic and demand patience in treatment—persistence with FELSOL will yield the highest possible percentage of successes.

NO MORPHIA NO NARCOTICS

Phenazone 0.47 Iodopyrine 0.03
Antipyrine Aceto-salicylas 0.40
Caffeine 0.10
Ext. Viscum Album 0.01
Ext. Brachycladii 0.01

**TESTICULAR BIOPSY IS THE ONLY
PRIOR CRITERION OF REVERSIBILITY
IN CASES OF OLIGOSPERMIA AND
AZOOSPERMIA.**

**Of 127 infertile men with low
negative sperm counts:**

79 had lesions conceivably produced by gonadotrophic deficiency, hence worth treating with this hormone. On a very MILD dosage, 400 i.u. thrice weekly, 12 got a total sperm count of at least 200 million; 22 got an increase of several million. A number of the remainder showed growth of germinal epithelium with maturation of younger cell forms only, **HENCE DESERVING OF MORE INTENSIVE THERAPY.**

Am. J. Med. Sci., 207, 519 (April, 1944)

A consulting-room technique for testicular biopsy is detailed in J. Mental Science, 90, 631 (July, 1944).
