

CHRYSOTHERAPY IN RHEUMATOID ARTHRITIS

On account of its high therapeutic activity and low toxicity SOLGANAL B OLEOSUM is undoubtedly the most effective form of gold medication.

Its oily suspension is administered intramuscularly and the resultant gradual absorption obviates the unpleasant sequelae so often a feature of chrysotherapy.

In line with the latest clinical results the dosage scheme has been amended to ampoules of 0.01, 0.02, 0.05 and 0.1 gm.

A recently published brochure will be gladly sent on request.

Solganal B Oleosum

'SOLGANAL B' is the registered name which distinguishes aurothioglucose of British Schering manufacture.

*What is
the use
of
pain?*

Pain is Nature's warning. It is also a useful guide to the doctor in his diagnosis. This done, pain has no further use, and its continuation merely causes unnecessary shock and suffering to the patient. And so, time out of mind, men have used narcotics to dull the bite of pain. Many of them such as myrrh, hashish and the poppy, had unfortunate after-effects. Not so the scientifically calculated mixture of Nitrous Oxide gas and air, which can be given by the modern gas-air apparatus. This device is so simple that it can be operated by the patient, leaving the doctor both hands free. Extensive surgical dressings, manipulations, and, of course, child-birth, lose their terror when a gas-air apparatus such as the "Minnitt" is employed. The industry that supplies compressed gases for all the needs and uses of the nation can take pride in playing its proper part in the conquest of pain.

"GAS-AIR ANALGESIA IN MIDWIFERY"
This is the title of our new informative and instructive film which we can arrange to be shown for your benefit on application.

THROMBIN in SURGERY

A new technique has been described* in which Thrombin and Plasma are used to produce *in situ* a physiological adhesive which soon becomes organised. It has been found for example that skin grafts secured in this way require no sutures, become vascularised earlier and succeed in a higher percentage of cases than by older methods. Applications to general surgery have been suggested.

Thrombin is available in suitable form for this technique.
