

## 'Albucid' Soluble

### EYE PREPARATIONS

'Albucid' Soluble is the only sulphonamide which is freely soluble and can be presented in *neutral* solution. Careful chemical, biological and bacteriological studies have clearly proved its deep penetration into the ocular tissues, its bacteriostatic action on *Ps. pyocyaneus*, *Staph. aureus* and *Pneumococcus* and its freedom from irritant action. Abundant clinical evidence in the treatment of 14,431 miners and industrial workers has established its great practical value in the prophylaxis and treatment of eye injuries and infections; 97% recovered with no loss of time whatever.

'Albucid' Soluble is presented in a variety of forms suitable for any method of administration:

Eye Drops      Eye Ointment  
Eye Lotion Tablets

*Descriptive literature on request*

'Albucid' is the registered name which distinguishes sulphacetamide of British Schering manufacture.

SMOOTH  
ANÆSTHESIA

**"We want the equipment  
the British use"—**

In planning their assistance to our Allies, the British Red Cross Aid to Russia Fund found a strong desire by Russian physicians that the equipment supplied should be identical with that used in the most up-to-date British hospitals. The tons of stores which have been despatched included thousands of lamps both for ultra-violet and infra-red irradiation, consigned to Rostov-on-Don, Stalingrad, and many other great hospitals of the U.S.S.R. Britain has sent only her best, and in the selection of this equipment for actinotherapy
