

Amethocaine hydrochloride is the choice of an increasing number of anaesthetists for regional anaesthesia. It yields a high degree of muscular relaxation combined with minimum operative and post-operative shock.

Regional "D" (Duncan) is supplied in sterile glass ampoules and consists of dry amethocaine hydrochloride which should be dissolved in sterile normal saline before use. It is indicated for abdominal field block, brachial plexus block, epidural block, etc. It may be used with the same confidence as is placed by the medical profession in the other world-famous Duncan, Flockhart anaesthetics.

Regional "D" (Duncan) is available in two strengths in ampoules containing 100 mgm. and 300 mgm. of amethocaine hydrochloride.
