# LAXATIVES

## for CHILDREN

To aid the Physician in choosing a laxative for children, we give the chief characteristics of Andrews. The dosage is easily adjusted according to age. Andrews is pleasant-tasting, and children accept it readily. Its laxative action is mild, and is due to the presence of magnesium sulphate and other salts in balanced proportion which increase the fluid content of the bowel by osmotic action and so lead to easy non-gripping evacuation. Andrews has a soothing effect on the stomach, stimulates the bile-flow and generally aids digestive processes. It is also useful as a gastric sedative in bilious attacks. Andrews has no costive reaction when discontinued.

### APPROX. ACTIVE CONSTITUENTS:

Tartaric Acid	...	26.33%
Citric Acid	...	2.40%
Sodium Bicarbonate	...	30.86%
Magnesium Sulphate	...	19.00%

A Medical Sample is again available free on request.

**DOSAGE FOR CHILDREN:** For two years of age, it is safe to start with  $\frac{1}{2}$  teaspoonful and to increase the dose as necessary for older children.

## For Gastric or Duodenal Ulcer

IN view of the increasing adoption of intensive alkaline medication for gastric and duodenal ulceration, the selection of a suitable antacid agent is a matter of considerable importance to the general practitioner.

'Alocol' allows of antacid therapy in a particularly effective, safe and reliable form, and replaces with advantage mixtures composed of sodium bicarbonate, magnesia, bismuth, etc. It does not produce any unpleasant secondary reactions, even when taken in large doses and over a long period of time.

'Alocol' neutralises excess gastric acidity to the most favourable degree without provoking the danger of alkalosis, thus producing a markedly soothing effect on the gastric mucosa, with the prompt relief of pain and discomfort.

'Alocol' is available in the form of Powder, Tablet and Cream.

**Powder**—The normal dose is 1 gramme before and after meals.

**Tablets**—Each tablet contains Alocol, 0.5 gm.; P. Sacch. Alb., 0.4 gm.; Cocoa Powder, 0.035 gm.; Excipient, q.s. The normal dose is 2 tablets before and after meals.

**Cream**—Formula: Alocol 6.0 parts approx.; Glycerin 5.0 parts; Ol. Menth. Pip. 0.005 parts; Aq. Chlorof. 4.0 parts; Aq. Dest. to 100.0 parts. The normal dose is 1 to 3 teaspoonfuls between meals and at bed-time.

## Vitamin Therapy - its uses and limitations

### In pursuit of protein

So accustomed have we become to thinking of Bemax mainly as a rich natural source of the vitamin B complex that its high protein content is not always fully appreciated.

Compare, for example, the *protein* content of bacon and Bemax. The 2-oz bacon ration should provide, in a week, about 6.2 grammes of first-class protein. One daily tablespoonful of Bemax will provide, in the same period, more than 30 grammes of *first-class* protein.

A comparison of *calories* shows about 255 for bacon and about 350 for Bemax.

So the nutritional value of Bemax comprises even more than its well-known vitamin content and for those who are able to supplement their diet with Bemax no lowering of the protein intake need occur.

### Bemax Stabilised cereal embryo

1 oz. of Bemax provides approximately:—

vitamin B <sub>1</sub>	0.45 mg.	iron	2.7 mg.
vitamin B <sub>2</sub>	0.45 mg.	copper	0.45 mg.
(riboflavin)	0.3 mg.	protein	30%
nicotinic acid	1.7 mg.	available	
vitamin B <sub>6</sub>	0.45 mg.	carbohydrate	39%
vitamin E	8.0 mg.	fibre	2%
manganese	4.0 mg.	calorific value	104

P.E.E.G

### THE ANTI-PYOCYANEA COMPOUND

**H**ERE is an important new bactericide and antiseptic. Phenoxytol (Nipa) is B-phenoxyethyl-alcohol, specially purified and standardised, for use in medical treatment and for pharmaceutical preparations.

Phenoxytol is effective against certain gram-negative organisms, including *Ps. pyocyanea*. It is used by local application in the treatment of infected wounds... abscesses... indolent ulcers... associated with *Ps. pyocyanea*. It should not be used for parenteral injections.

Phenoxytol is very effective in pyocyanea infections of burns or superficial wounds. It is especially useful in the preparations of surfaces for skin grafting associated with *Ps. pyocyanea*, and may also be used together with Penicillin in solutions and creams.

I-SO-GEL, a granular preparation of certain dried mucilaginous seeds, has the property of reproducing the normal stimulus to intestinal peristalsis by increasing the intestinal bulk, through absorption of water in the alimentary canal.

I-SO-GEL contains no purgatives and is a purely natural laxative with a smooth mechanical action, specially suitable for the constipation of diabetes.

It is valuable also in mucous colitis, dysentery, haemorrhoids, and intestinal flatulence. After the performance of colostomy, I-so-gel gives excellent results by solidifying the faeces.

# Universal prescription in pregnancy

Common to expectant mothers throughout the world is the tendency towards a deficiency of iron, of calcium and of vitamin D. The foetus makes imperious demands upon maternal reserves of these factors and, when the diet fails to make good these demands, the mother's health must inevitably suffer. Caldeferrum Tablets have the specific purpose of safeguarding maternal health by ensuring a nutritionally sufficient intake of iron, calcium and vitamin D. Four tablets daily supply more than the mother's estimated requirement of iron; calcium up to five-sixths of the estimated need; and ample vitamin D to ensure efficient assimilation of the calcium. Indeed, this simple routine represents a fundamental step towards nutritional 'well-being' in pregnancy and is wisely continued during the lactating period.

## The **HECSON** SUPER ELASTIC TRUSS for the Treatment of Hernia

Strap is fixed to Pad at A.  
Therefore greater pressure  
is exerted at B, when the  
strap is pulled tightly.

Where treatment of Hernia by surgical methods is undesirable for any reasons, the HECSON super elastic truss can be confidently recommended. The Special Feature of the HECSON Truss is that the perineal or under strap is attached to the top of the pad instead of the lower margin as in the ordinary elastic or old spring truss. Thus it becomes part of the leverage mechanism for increasing the pressure of the pad at its base.

# PENICILLIN LOZENGE B.P.

Designed for slow disintegration when placed in the mouth, 'Avlon' Penicillin Lozenges provide a convenient, pleasant and effective means of maintaining bacteriostatic concentrations of Penicillin in the saliva. They are, thus, of value in the prophylaxis and treatment of infections of the mouth due to penicillin-susceptible organisms. The lozenges have proved highly effective in the treatment of post-operative dental infections and infective conditions of the oral mucous membranes, e.g. Vincent's angina.

**Dosage:**

The lozenges are given at intervals of 1 or 2 hours and should be allowed to dissolve slowly in the mouth without sucking or chewing, treatment being continued for several days according to the condition of the patient.

**Packings:**

## Skin conditions

Although there is still some controversy as to precisely which of the vitamins are concerned in maintaining a healthy condition of the skin, there is abundant evidence to show that members of the B<sub>2</sub> complex are among those which are essential.

It is often considered to be preferable to administer a natural source of the B<sub>2</sub> vitamins such as Marmite, which is a yeast extract containing riboflavin (1.5 mg. per oz.) and niacin (16.5 mg. per oz.) as well as other factors of the B<sub>2</sub> complex, including pyridoxin, pantothenic acid, choline, biotin and folic acid.

M159/1

This is the new model for ultra-violet ray therapy (general body irradiation). It incorporates so many points of technical and mechanical excellence that it almost calls to be depicted in the transatlantic or St. Sebastian manner—with arrows directed to all the vital spots. As a practitioner, however, you will be more interested in what you could accomplish with the lamp for your patients. With this Alpine Sun you would be equipped to have 'the most vitalizing of all measures' administered under your own direction and supervision. You would be able to build resistivity and develop reactive capacity, assisting other forms of treatment. And you would be applying this protean therapy in the most effective and economical manner possible.

### PROCESS OF HOMOGENIZATION

The distinctive and altogether scientific method by which Libby's Baby Foods are prepared, render them especially suitable for very young infants. First strained, Libby's Baby Foods are then homogenized, which accelerates the rate of digestion by the disruption of the cellular membranes and the exposure of intracellular nutrients to the digestive enzymes. The ready assimilability and tolerability in the gastro-intestinal tract of even extremely young infants, is clearly indicated in the weight gains so expressive of an infant's progress.

Voluntary patients who are suffering from incipient mental disorders or who wish to prevent recurrent attacks of mental trouble, temporary patients and certified patients of both sexes are received for treatment. Careful clinical, biochemical, bacteriological and pathological examinations. Private rooms with special nurses, male or female, in Hospital or in one of the numerous villas in grounds of the various branches can be provided.

**WANTAGE HOUSE.**—This is a Reception Hospital in detached grounds with a separate entrance to which patients can be admitted. It is equipped with all the apparatus for the complete investigation and treatment of Mental and Nervous Disorders by the most modern methods; insulin treatment is available for suitable cases. It contains special departments for hydrotherapy by various methods, including Turkish and Russian baths, the prolonged immersion bath. Vichy Douche, Scotch Douche, Electrical Baths. Plombières treatment, etc. There is an Operating Theatre, a Dental Surgery, an X-ray Room, an Ultra-Violet Apparatus, and a Department for Diathermy and High-frequency Treatment. It also contains Laboratories for biochemical, bacteriological, and pathological research. Psychotherapeutic treatment is employed when indicated.

**MOULTON PARK.**—Two miles from the main Hospital there are several branch establishments and villas situated in a park and farm of 650 acres. Milk, meat, fruit, and vegetables are supplied to the Hospital from the farm, gardens, and orchards of Moulton Park. Occupational therapy is a feature of this branch, and patients are given every facility for occupying themselves in farming, gardening and fruit-growing.

**BRYN-Y-NEUADD HALL.**—The seaside house of St. Andrew's Hospital is beautifully situated in a park of 330 acres at Llanfairfechan amidst the finest scenery in North Wales. On the North-West side of the Estate, a mile of sea-coast forms the boundary. Patients may visit this branch for a short seaside change or for longer periods. The hospital has its own private bathing house on the seashore. There is trout-fishing in the park.

At all the branches of the Hospital there are cricket grounds, football and hockey grounds, lawn tennis courts (grass and hard courts), croquet grounds, golf courses, and bowling greens. Ladies and gentlemen have their own garden, and facilities are provided for handicrafts such as carpentry, etc.

For terms and further particulars apply to the Medical Superintendent (Telephone Nos.: 2356 and 2357 Northampton), who can be seen in London by appointment.

### THE RETREAT, YORK

The Pioneer Hospital, opened 1796, for the humane treatment of those suffering from Nervous and Mental Disorder.

## Clear liquid broth for infants from 4 months

Calcium and protein requirements standardized by accurate pH control

More and more mothers now realize the importance of starting babies on bone and vegetable broth at 4 months.

The clear liquid broth made by Brand's specially for infants ensures that babies get the valuable minerals and protein they need from broth. Brand's Bone & Vegetable Broth is a stock made from bone, carrot, spinach, beet and parsley. Its calcium content, which is sufficient to make an important addition to the infant's calcium needs, is ensured by careful pH control during preparation. The protein is derived from the collagen of the bone, and is all in soluble form, so that there is no solid protein to trouble a baby's sensitive digestive system.

Packed hygienically in glass jars, this broth is ready to give in the feeding bottle or by spoon, without preparation. 10½d. a jar. Other varieties of Brand's Baby Foods: Strained Carrots and Strained Prunes.
