

In more than 2,000 years of medical progress few things would have impressed the philosopher more than the many benefits that derive from the use of Soundmirror magnetic tape recording.

In private practice and in the great hospitals this remarkable instrument is in daily use for recording diagnoses, consultations, psychiatric interviews, reports, lectures, even surgery in progress.

Please write for literature explaining the many ways in which the Soundmirror would prove a boon to you in your work.

The replaceable barrel means great economies in the long run

The glass barrel is protected by a metal casing and breakage risk is thereby reduced to a minimum. If the glass barrel is broken only the glass barrel and piston need be renewed.

Spare barrels are supplied complete with individually fitted pistons. Users however are advised to order a spare barrel when they buy the syringe; this permits *instant* replacement.

All components can be taken apart or assembled in a few seconds.

No cement or solder is used and sterilization can be done at temperatures up to 200° C. The metal piston must be withdrawn during sterilization but there is no need to dismantle the rest of the syringe.

In the form of Solprin

aspirin can be better tolerated in large doses over prolonged periods.

'Solprin' is a soluble, stable and palatable tablet providing pure calcium aspirin. That is, Solprin overcomes the physical and chemical disadvantages of both aspirin and calcium aspirin, and combines the advantages of both.

Unlike ordinary aspirin, Solprin is substantially neutral and soluble: and unlike calcium aspirin it does not decompose during manufacture and storage. Thus Solprin combines the analgesic, sedative and anti-rheumatic effects of aspirin with the solubility and blandness of pure calcium aspirin.

Extensive clinical trials with Solprin show important results such as might be expected of so excellent a combination of properties. Except in cases of extreme hypersensitivity, Solprin can be tolerated in large doses over prolonged periods without the development of gastric and systemic disturbances.

Aureomycin
HYDROCHLORIDE CRYSTALLINE
lederle

*A true broad-spectrum, low-dosage, uniformly active
antibiotic produced in the highest degree of purity by
the highest chemical, physical and biological standards.*

To date aureomycin has been the subject of over 7,000 papers from highly authoritative world-wide sources in every branch of medical practice—a number which exceeds the literature on any other broad-spectrum antibiotic by a wide margin. Since 1949, the trend of these reports confirms the effectiveness of low dosage of aureomycin, in contrast with the trend toward higher dosages shown in the literature on other broad-spectrum antibiotics.

AT LOW DOSAGE...

- * Aureomycin shows a range of clinical usefulness against most bacterial and other infections which materially exceeds that of any other broad-spectrum antibiotic.
- * Aureomycin produces adequate blood levels with no increase in irritation.
- * Aureomycin maintains therapeutic concentrations in the body because it has a low excretion rate.
- * Aureomycin is so effective as to reduce the period of disability, or hospital stay, often to a few days or hours.
- * Aureomycin has repeatedly been used to rescue patients who failed to respond to other antibiotics—even in difficult and resistant cases.

Now estimated to have been used in 10,000,000 clinical cases, aureomycin is safe, economical, effective—a true broad-spectrum antibiotic.

Marked decrease of pyogenic infections follows the use of DERL containing HEXACHLOROPHENE

The use of "Derl", containing Hexachlorophene, has proved effective in causing a marked decrease in the incidence of pyogenic infections such as Whitlows, Sycosis, Impetigo, Furuncles, Carbuncles and Cellulitis, and can be prescribed with confidence to patients liable to these conditions.

A wash with Derl lasting from one to three minutes will reduce the bacterial flora of the skin to a level unheard of by the use of ordinary soap, or by the combination of ordinary soap with other chemicals.

The high germicidal activity of this remarkable new soap is known to be due to the absorption of Hexachlorophene by the skin in sufficient quantity to exert a continuous bacteriostatic effect. No cases of sensitization have been reported.

We gladly send testing samples to members of the medical profession.

New Peptic Ulcer Treatment Comparable to Drip Therapy

Whole milk and alkaline constituents
combine to produce
increased buffering action

NULACIN TABLETS have been evolved to meet a very real need in the treatment of gastric and duodenal ulcers.

All the literature on the treatment of peptic ulcers emphasizes the proven value of diminishing the acidity of the gastric juice. Many large and otherwise intractable ulcers can be healed by a continuous, intragastric drip of milk or alkali.

Drip therapy is, however, not always available, nor is it practicable to use it in many instances. Nulacin offers a satisfactory alternative.

Continuous Neutralization

A **NULACIN TABLET** allowed to dissolve slowly in the mouth has been shown clinically to provide a continuous neutralization comparable with that of drip therapy.

NULACIN TABLETS contain nutrient in a most acceptable form to the peptic ulcer patient. Nulacin tablets obviate the necessity of taking frequent feeds, and so lessen the tendency to obesity which must inevitably occur in those who are following a dietary regime of food at frequent intervals.

During ulcer activity the suggested dosage is 3 tablets to be sucked each hour, and for follow-up treatment 2 tablets should be sucked between meals, beginning half an hour after a meal.

The tablet is of a suitable size, and of a consistency and hardness, so that, when it is sucked, the result is a constant and prolonged neutralization of the gastric juice.

NULACIN TABLETS are extremely palatable and during extensive clinical tests their taste has proved to be particularly acceptable to patients.

The patient should be instructed to place the tablet between the gum of the upper jaw and the cheek. Here it will be comfortable, and slowly dissolve. The efficacy of the tablet is greatly diminished if it is chewed and swallowed.

NULACIN TABLETS are not advertised to the public. There is no B.P. equivalent to this tablet.

SMELL ADSORPTION

IMPORTANT NEW AIDS FOR PATIENT AND MEDICAL STAFF

Here are three new and important products that should become part of the normal equipment of every ward and surgery. Each solves a serious problem. Their common function is the adsorption of foul smells associated with such conditions as osteo-myelitis, carcinoma of the rectum, senility, gas gangrene, etc. The adsorption is effected by granules of activated carbon, sandwiched in the layers forming Denidor Blankets, Pads and Masks. The materials enclosing the carbon allow free passage of air, but any smell carried in the air is adsorbed by the carbon.

Denidor Blankets, Pads and Masks serve a threefold purpose. The blankets help the bed-patient suffering from a noxious complaint, and those who visit him or are near him. The masks make nursing him less unpleasant; and the pads free those mobile patients whose social and personal activities are restricted by, say, a colostomy.

Denidor Blankets and Pads are available now: the Nursing Masks will be obtainable shortly.

DEBILITY

The B-complex group of vitamins is responsible for the utilization of carbohydrate in the diet. It also plays an important part in other cellular oxidation systems. In convalescence associated with debility, B-complex is an essential adjunct to treatment, but it is important that a correctly balanced preparation be selected. Such a one is Crookes B-Complex, each sugar-coated tablet containing:

aneurine	1.0 mg.	nicotinamide	10 mg.
riboflavine	1.25 mg.	yeast	227 mg.

More Hours of Allergy Relief

8 to 24 from a single dose

It's not "just another antihistaminic" . . . it's different, outstanding for prolonged action—DI-PARALENE (Chlorcyclizine Hydrochloride, Abbott), a compound with a piperazine base rather than the conventional ethylenediamine. Eight to 24 hours of allergy relief may be obtained from a single dose. Initially, DI-PARALENE should be administered in 50 mg. doses three times a day for the average adult, but in the majority of cases this dosage can later be reduced to one or two doses a day. Relief throughout the night may be obtained with a single dose at bedtime. In many instances, no additional dosage is required until the next bedtime. In one clinical investigation in which 186 allergic patients were treated by several physicians, chlorcyclizine was rated the most effective of all the antihistaminic agents studied.¹ Side-effects are fewer and milder than usually expected with drugs of this type. Out of a group of 65 patients treated for 84 types of common allergic symptoms, only 5 per cent showed toxic symptoms, the most prominent being drowsiness.² Give long-acting DI-PARALENE a thorough trial in your allergy cases this season. DI-PARALENE 50 mg. bisected tablets are available in bottles of 25, 100 and 500.

THERE'S STRENGTH IN COMBINED ACTION

The answer to many a problem lies in combined action. Witness the higher blood levels and the greater clinical efficacy that have been reported from the oral administration of penicillin and the sulphonamides simultaneously in cases when the oral administration of the antibiotic or chemotherapeutic agent alone has been ineffective. A convenient means of applying this combined antibacterial therapy is Sulpenin. Containing penicillin, sulphadiazine and sulphamerazine in balanced dosage, it provides a valuable treatment for many infections due to susceptible micro-organisms. By utilising the synergistic action between penicillin and the sulphonamides the antibacterial range is increased, the likelihood of kidney damage is lessened and the tendency for the bacteria to develop mutant strains resistant to one or other of the component drugs is reduced.

in urinary-tract infections

'Mandelamine' is effective against a wide range of organisms commonly encountered in urinary-tract infections. This effectiveness is rarely, if ever, marred by the development of drug-resistance, and organisms that are already resistant to the sulphonamides or streptomycin remain fully susceptible to 'Mandelamine'.

'Mandelamine' therapy is safe and simple—3 to 4 tablets t.i.d. Neither regulation of diet or fluids nor accessory acidification of the urine are required (except when urea-splitting organisms are present), and undesirable side-effects occur so infrequently as to be negligible.

Safer salicylate therapy

The possibility of toxic reactions from large or continuous doses of salicylates is now more widely recognised. The modern approach to salicylate therapy—using EKAMMON—overcomes these serious sequelae.

Containing aspirin (0.33 gm.), vitamin K (0.23 mgm.) and vitamin C (20 mgm.), EKAMMON has special virtues as an analgesic and anti-rheumatic. Vitamin K counteracts the prothrombin-reducing action of aspirin—preventing haemorrhagic tendencies. The addition of vitamin C compensates both the increased excretion of the vitamin during salicylate medication and the ascorbic acid

deficiency usually associated with rheumatic patients.

EKAMMON is now regarded as the most modern form of salicylate therapy, of unique value in rheumatism, arthritis, fibrositis and dysmenorrhoea. Intensive dosage can be used without the risk of systemic reactions and the depression produced by salicylates alone.

Special Requirements

In certain circumstances the need for an increased supply of vitamins may arise. One outstanding example is the need for additional vitamins during pregnancy. Conditioned deficiencies of vitamins may arise as a result of the administration of anti-biotics, or as a result of absorptive defects.

As it is often considered preferable to administer vitamins in the natural form, Marmite yeast extract is frequently prescribed as a supplementary source of the B₆ factors.

NYDRAZID

SQUIBB

A NEW ANTI-TUBERCULOUS DRUG

NYDRAZID (iso-Nicotinic Acid Hydrazide) showed considerable activity against tubercle bacilli during extensive screening tests carried out on several thousand compounds in the Squibb Institute of Medical Research.

NYDRAZID has been subjected to pharmacological investigation and clinical trials which have indicated that the drug has real promise in the treatment of tuberculosis.

NYDRAZID supplies have been handed to the Medical Research Council so that a thorough scientific evaluation of its potentialities may be made as early as possible. Other trials are in progress under leading clinicians in British hospitals.

NYDRAZID is now being produced commercially and ample supplies are available to meet the needs of sanatoria, hospitals and general practice.

NYDRAZID is presented as tablets, scored to facilitate dosage—each containing 100 mg. iso-nicotinic acid hydrazide—in bottles of 100 and 1,000. 50 mg. tablets also available—bottles of 100 and 1,000.

Availability of Vitamins in Yeast

Deficiencies of single factors of the Vitamin B Group do not occur. Accordingly, even if a deficiency condition appears to result from the lack of an individual factor of the group and it is considered necessary to give intensive treatment with this factor, the entire Vitamin B Complex should always be administered concurrently.

It is, however, extremely important, in view of suggestions in recent publications, that the vehicle selected as a source of the entire B Complex does not withhold its vitamin content from the patient.

Human experiments show that the rich, natural vitamin potency of Aluzyme is totally available to the human system.

Astral Skin Cream is now available in a large HOSPITAL PACK

This emollient and bland cream contains lanolin, glycerine, cholesterol and other neutral oils in uniform and stable dispersion. It is quickly absorbed by the skin and so its use is beneficial for many minor skin conditions in both children and adults. It is also recommended during and after ray therapy. Nurses and doctors find Astral ideal for their hands as it prevents roughness after immersion in water or detergents. Keep a jar handy in the ward and among medical supplies — you will soon find it indispensable in so many ways.

Deferment of call-up for "R" practitioners (i.e., practitioners liable for call-up under the National Service Acts) is granted at the discretion of the Central Medical Recruitment Committee and (in Scotland) the Scottish Central Medical Recruitment Committee. The Committees normally allow an "R" practitioner to hold a First House Officer post (N.H.S. salary £350 per annum) provided that he obtains it without delay. Under present arrangements the Committees also normally allow an "R" practitioner to hold a Second House Officer post (£400) and a Senior House Officer post (£670), provided in each case that the higher appointment is secured before the termination of the practitioner's current appointment.

"R" practitioners may not accept Third House Officer posts (£450 per annum) unless they have obtained the special permission of the C.M.R.C. or (in Scotland) the Scottish C.M.R.C.

SALARY SCALES OF JUNIOR GRADES OF HOSPITAL MEDICAL STAFF

Registrar Grades, Whole-time

(a) **REGISTRAR:** Posts obtained normally not less than two years after registration as a medical or dental practitioner and held normally for two years: £775 per annum in the first year; £890 per annum in the second and any subsequent years.

(b) **SENIOR REGISTRAR:** Posts obtained normally not less than four years after registration as a medical or dental practitioner and held normally for three years: £1,000 per annum in the first year; £1,100 per annum in the second year; £1,200 per annum in the third year; £1,300 per annum in any subsequent years.

Other Grades, Whole-time

(a) **HOUSE OFFICER:** £350 per annum for the first post held, £400 per annum for the second post held; £450 per annum for the third and any subsequent post held; with, in each case, a deduction at the rate of £100 per annum in respect of board and lodging and other services provided. Each post shall be tenable for six months.

The Minister will be prepared to authorize, in exceptional circumstances, salaries up to £50 per annum higher than the standard rates specified above where a post cannot be filled otherwise.

(b) **SENIOR HOUSE OFFICER:** Posts obtained normally not less than one year (in Scotland, two years) after registration as a medical or dental practitioner and normally held for one year only: £670 per annum.

(c) **JUNIOR HOSPITAL MEDICAL OFFICER:** Officers who have held house appointments but who are not Registrars and who have less responsibility than other hospital officers of non-consultant status: £700 (for an officer appointed not less than two years after registration as a medical practitioner) by £50 to £1,000 per annum.

ALL NATIONAL HEALTH SERVICE HOSPITAL APPOINTMENTS ARE IN ACCORDANCE WITH THE TERMS AND CONDITIONS OF SERVICE OF HOSPITAL MEDICAL STAFF

Those intending to apply for resident appointments in the Registrar grades are recommended to make inquiries with regard to the deductions proposed for board and lodging at the time of submitting their applications, where this is not stated in the advertisement.
