For Secondary Anaemias

ORAL ORGANIC IRON Ferrous Gluconate

Ferrous Gluconate, the organic iron salt first introduced in this country in the form of ELIXIR CEREVON, has proved a great advance in the treatment of iron deficiency anaemias.

Ever increasing clinical evidence and general professional opinion shows that ELIXIR CEREVON will rapidly correct the secondary anaemic states, thus shortening the period of treatment usually required when inorganic salts are used, without producing the side effects common to inorganic ferro-therapy, even in patients who are normally intolerant to iron.

The Ferrous Gluconate contained in ELIXIR CEREVON has an extremely low ferric content and is stable. The complete preparation has the added advantage of being very palatable.

Each teaspoonful contains :

Ferrous Gluconate 0.3 gm.
Aneurine Hydrochloride 1 mgm.

Acute sinusitis and flare-ups of chronic sinusitis respond well to local treatment with penicillin, for unlike the sulphonamides penicillin is not inhibited by the presence of pus. 'Pendex' has a marked penetrative action and reaches all parts of the nasal cavity. 'Paredrinex', the vasoconstrictor of 'Pendex', is non-irritating and reduces congestion approximately twice as rapidly as ephedrine, and for a more prolonged period without stimulation of the central nervous system.

The problem of urinary - ammonia dermatitis

The irritant action of ammonia arising from the bacterial decomposition of urine is a long-recognized problem in infant welfare. Treatment of urinary-ammonia dermatitis (nappie rash) has hitherto been mainly palliative, but now curative and prophylactic measures are available in a product of unique composition—ZAC Baby Cream. ZAC contains, in addition to its soothing and healing ingredients—high grade zinc oxide, superfine lanoline and purest castor oil—the powerful bactericides hexachlorophene and amino-acridine which destroy the bacteria and prevent pyogenic skin infections. Application of ZAC quickly soothes inflamed areas and removes the cause of further irritation.

Although primarily designed for infants, ZAC is also suitable for treating abrasions, etc.

LIVER INJECTION U.S.P. - 20 MICROGRAMS

**NOW AVAILABLE IN
GREAT BRITAIN**

LEDERLE'S undisputed reputation for superior Liver Extracts stems from a quarter of a century's experience in liver-extract research. Their latest liver extract—Liver Injection U.S.P.—20 Micrograms—described in a recent British study as "significantly more potent" than other extracts* is now available to doctors in Great Britain. Liver Injection U.S.P.—20 Micrograms *Lederle* contains 20 µg. of vitamin B₁₂ activity in each cc. and is especially suited to the prolonged treatment of pernicious anaemia because of its small volume, high concentration of anti-anaemic substance and low concentration of solids—qualities which ensure minimum patient discomfort and maximum therapeutic effect. In addition it is outstandingly useful in everyday practice for hepatic and metabolic stimulation.

*A review of pernicious anaemia patients on liver extract maintenance over several years showed a deterioration in their red-cell count and clinical conditions. A change to Solution Liver Extract Concentrated *Lederle* (now known as Liver Injection U.S.P.—20 Micrograms) brought about striking improvement in 20 of the 25 patients who had been maintained on extracts, as well as in 3 patients who had neglected their treatments. The author concluded from the definite response to the change of treatment that the *Lederle* Extract was significantly more potent than those previously used.

Subjective warmth and glow

'ALGIPAN', the smooth non-greasy HISTAMINE cream, relies upon methyl nicotinate to ensure swift penetration of the cutaneous barrier.

Simple inunction suffices to shepherd the Histamine content through the epidermis to the deeper tissues, where the resulting dilatation of arterioles and capillaries promotes a local increase in blood supply, accompanied by a reflex cessation of aching in underlying muscles.

To the patient, this is evidenced by a circumscribed surface 'flush' and warming glow, rapidly followed by disappearance of pain.

'Algipan' is of proven value in fibrositis and other manifestations of the 'rheumatic' syndrome.

Terramycin

in

Urinary Tract Infections

The value of Terramycin in the general field of infective medicine is due to its very wide anti-bacterial range, its versatility and ease of administration, the rapidity of its action, and its remarkably low toxicity.

In urinary tract infections, the particular value of Terramycin lies both in its ability to reach relatively high concentrations in the urine on low dosage and in a corresponding increase in urine concentration which results from an increase in dose.^{1,2}

INDICATIONS IN URINARY TRACT INFECTIONS

1. Infections due to mixed bacterial flora.
2. Infections resistant to other chemotherapeutic and antibiotic agents.
3. Infections due to *Pseudomonas pyocyanea*.
4. Infections with anatomical abnormalities or other complicating mechanical factors of the urinary system.
5. For pre-operative and post-operative control of infection in genito-urinary surgery.
6. Infections due to other Terramycin-sensitive organisms.

Terramycin can now be used for all suitable conditions in Hospitals in Great Britain and a complete range of oral, intravenous and topical dosage forms is available.

Peritrate is a drug of considerable benefit in the prophylactic treatment of patients with coronary insufficiency, regardless of their age. The evidence of clinical trials indicates that in some cases Peritrate may protect completely against attacks; in others, the number of attacks is substantially reduced; while those attacks not prevented may be less intense and of shorter duration. Results so far obtained with Peritrate suggest that it is more efficacious than drugs such as aminophylline or khellin; also there are certain other beneficial effects which can be expected:

1. Less palpitation, especially at night.
2. Shortness of breath on effort, less severe.
3. An improvement of 50 per cent in distance walked.
4. Reduction of nitroglycerin requirement.
5. The negative S-T segment shifts, ordinarily occurring after exercise, modified; Peritrate has returned the abnormal resting electro cardiogram towards normal in a significant number of cases.

It is indicated in skin disorders due to essential fatty acid deficiency of dietetic or "absorption" origin, i.e., chronic furunculosis, eczemas of various types including infantile eczema and in some cases of acne. It is also excellent in the healing of all wounds free from serious infection—particularly leg ulcers. Sufficient success has also been reported to warrant its use—as an unsaturated substance—in the treatment of psoriasis.

Cutting the coat to suit the cloth

With insurance policies as with clothes—it's the well-fitting ones that give the greatest satisfaction. The many ready-made policies often do not meet the needs of the individual. We have always borne this in mind when planning our policies. To keep them flexible rather than rigid; and to plan them personally to fit both the needs—and the pocket—of the prospective policyholder. If you are concerned for your future or for the future of your dependants, see how simple it is to guarantee now what you need. For example, at the age of 25 by setting aside the modest sum of £5 a month we could provide:

FOR YOU

In 20 years a cash sum of £1,000 plus profits.

Should you become disabled, your premiums cease during disability and an income of £10 monthly is paid to you.

FOR DEPENDANTS

Benefits up to a maximum of £3,400. Immediate cash payment of profits plus Pension of £10 monthly for balance of 20 years

Plus cash at end of Pension period .. £1,000

WHEN THE NEED IS FOR GLUCOSE

When the patient is weak and needs glucose LUCOZADE will quickly provide strength and refreshment.

This sparkling glucose drink, so energising and sustaining, is delightfully refreshing to the invalid palate. LUCOZADE represents an improved form of glucose therapy entirely free from the objectionable features which used to make the administration of glucose such a problem.

THERAPY

KAYLENE-OL

*the satisfactory and palatable
emulsoid of
kaolin and liquid paraffin*

There is no more "physiological" preparation for routine use :—

- (a) As a gentle laxative at bedtime. It is effective when stimulant purgatives often fail. This is especially so in the face of colon spasm and hypertonia.
- (b) As a preventive of dyspepsia, when it should be taken some few minutes before every meal.

Modern Treatment for

FUNGOUS SKIN INFECTIONS

It is now firmly established that the skin protects itself against infection by its "acid mantle." Experiments have proved that the higher fatty acids are extremely effective fungicides which do not produce contact dermatitis.

Decilderm Ointment and Powder (Duncan) present the particularly effective fatty acid, undecylenic acid, and its zinc salt. Both preparations are pleasantly perfumed and are easy to apply. They can be used for long periods, if necessary, and are valuable for the treatment of tinea pedis (athlete's foot), tinea cruris (dhobi itch), moniliasis, etc.

AMINO ACID AND ANTACID THERAPY

*The Medical
Management
of Gastro-
Duodenal
Ulceration.*

Rapid disintegration ensures prompt relief from epigastric pain due to hyperacidity and gastro-duodenal ulceration. A prolonged "buffering action" for over three hours is established causing no "acid rebound." The liberation of the amino acid glycine stimulates the granulation of the ulcer bed and the normal enzyme activity is ensured whilst the mucosa is protected by the freely formed colloidal gel.

Deferment of recruitment for fully registered "R" practitioners (i.e., fully registered practitioners liable for call-up under the National Service Acts) is granted at the discretion of the Central Medical Recruitment Committee and (in Scotland) the Scottish Central Medical Recruitment Committee. The Committees normally allow a fully registered "R" practitioner to hold a First House Officer post (N.H.S. salary £350 per annum) provided that it commences within three months of the end of his deferment by the Ministry of Labour and National Service as a whole-time medical student; and a Second House Officer post (N.H.S. salary £400 per annum) provided that it is secured before the end of his First House Officer post and commences within one month thereafter.

An "R" practitioner requires the special written permission of the C.M.R.C. or (in Scotland) the Scottish C.M.R.C. to proceed to any further post.

The position of provisionally registered "R" practitioners has been made clear in a notice sent to them by the University Joint Recruiting Boards.

PSYCHIATRY**PSYCHIATRISTS**
with Psycho-analytic experience

are invited to consider a post offered by an industrial concern near Leeds. The object of the appointment is the improvement of the mental health and human relations within an industrial community. The method of approach would be arranged in consultation with the psychiatrist, but is at present envisaged as supplying: first, an individual and group psycho-therapeutic service, particularly to the more influential members wishing to avail themselves of it; secondly, psychiatric assistance in selection screening for more important appointments; and finally, where requested, advice to senior executives on relevant implications of policy and practice. Research projects are a possibility. The post could be full-time or less, as additional private practice is available and there may be openings for other consultant psychiatric work and teaching. It is hoped, for example, that a very close connexion with the University Department of Psychiatry can be built up, and that the successful candidate may receive some honorary appointment which would allow him to take part in teaching and research. The primary qualifications are psycho-analytic and psycho-therapeutic training and experience, plus the capacity to maintain a completely independent professional role within an industrial organization. Age over 30; date of appointment by arrangement; salary not less than the consultant scale appropriate to age and experience in this specialist work. A similar post existed throughout the past five years, and is now vacant through an unexpected death. Information and inquiries on the professional aspects of this post from Tavistock Institute of Human Relations, 2, Beaumont Street, London, W.1 (WELbeck 5415).
