## Lung Function in Coalworkers' Pneumoconiosis

by J. C. GILSON and P. HUGH-JONES

The principal symptom of pneumoconiosis is excessive breathlessness on exertion. This Report describes an investigation undertaken with the object of determining the precise cause of the breathlessness and relating its severity to the X-ray changes in the lung which are known to occur. The Report will be of interest not only to those concerned with the problem of pneumoconiosis but to respiratory physiologists in general. (1955.) Special Report Series No. 290

## Anaemias of Infancy

The value of Imferon in Nutritional Anæmia of Infancy and in the prophylaxis and treatment of Anæmia of Prematurity has recently been convincingly demonstrated.

"There was obvious rapid clinical improvement in all cases as shown by the return of appetite, change of disposition, improvement in colour, and gain in weight."

"The daily rise in hæmoglobin during the first two weeks after treatment was almost 1.5%."—*Brit. Med. J.*, 1955, 2, 700.

Imferon is the most practical and effective means of administering iron to infants who do not make progress on oral preparations. The increase in hæmoglobin concentration is about 20% in two weeks—more than can be achieved with any form of oral therapy.

THE INDICATIONS FOR IMFERON IN INFANCY ARE :

1. Nutritional anæmia in infants who do not make progress on oral iron.
2. Nutritional anæmia in infants whose home conditions are poor and who would otherwise have to be admitted to hospital.
3. The prophylaxis and treatment of anæmia of prematurity.
4. As an alternative in some cases to blood transfusion.

FURTHER INFORMATION IS AVAILABLE ON REQUEST.

Imferon is issued in ampoules of 2 ml. (100 mg. Fe) in boxes of 10 and 100.

## 16 years of clinical opinion supports the use of vaginal tampons

---

# a high standard of hygiene is encouraged and personal comfort increased

There is abundant clinical evidence to support the widespread and increasing use of tampons for the internal absorption of the menstrual flow. Research work conducted in Britain and America over the past 16 years (1-7) has shown conclusively that vaginal tampons properly used are in no way prejudicial to health.

Women welcome them because of the extra comfort and because they are now able to indulge in social activities and sports with a greater sense of physical and mental freedom. One observer (6) found that elimination of pads, pins and belts, and of the chafing and itching caused by the usual external pads were factors greatly in favour of tampons. Another observer (7) noted that 93.6% of her subjects preferred to go on using tampons once they had tried them, rather than return to perineal pads, and many workers stress the freedom from odour and vaginal and urethral infection of peri-anal origin.

Intelligently used, vaginal tampons represent a decided advance in feminine hygiene. They may be recommended with confidence.

## LIL-LETS

### the new vaginal tampon without applicator

A tampon which has been successfully marketed on the Continent during the last five years has now become widely accepted in this country under the name LIL-LETS.

Following extensive clinical trials, LIL-LETS have won the support of leading gynaecological opinion. Samples will gladly be sent to medical practitioners on request.

**LIL-LETS**  
o.b.

### LIL-LETS have these main advantages:

**LIL-LETS need no applicator.** By inserting the tampon with the fingers, the risk of bruising is eliminated.

**LIL-LETS assist personal hygiene.** At 1/6 for 10 they are so much cheaper than other leading tampons that women will be encouraged to change them often. They are easily carried about and easily disposed of.

**LIL-LETS are highly absorbent.** They absorb almost ten times their own weight in moisture and swell sideways, not lengthways. They are, therefore, really safe.

**LIL-LETS are individually wrapped.** Each tampon is sealed in a transparent cover. There is no risk of soiling or infection when it is carried loose.

## for medical and surgical conditions

*Clinically proven to reduce bleeding-time without effect  
on coagulation or blood pressure, and to have no undesirable side effects*

**ADRENOXYL**, a product of original research, reduces the mean bleeding-time by decreasing the permeability and increasing the contractility and resistance of the capillaries. Its effectiveness in diminishing blood loss has been demonstrated by clinical studies.

**ADRENOXYL** has no effect on coagulation. It neither increases nor decreases blood pressure.

**ADRENOXYL** is non-toxic, and there are no contra-indications to its use.

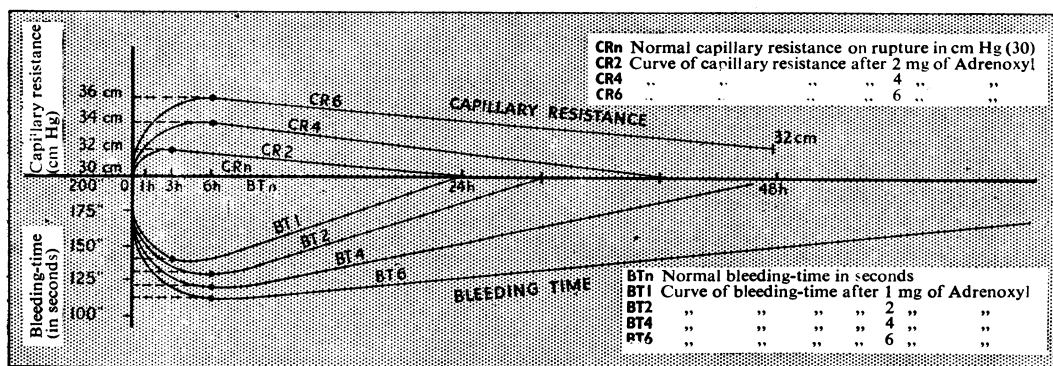

**ADRENOXYL** is indicated in the preventive and curative treatment of all types of capillary bleeding.

**ADRENOXYL** has been successfully used to diminish capillary bleeding in a wide range of surgical operations, and has proved particularly

useful in ear, nose, and throat surgery, ophthalmic surgery, thoracic surgery, gastro-intestinal surgery, plastic surgery and urogenital surgery. It has also been used successfully in many medical conditions associated with capillary haemorrhage or where capillary fragility is a feature.

**ADRENOXYL** may be administered by mouth or by subcutaneous or intramuscular injection. The oral form is for routine treatment, though when rapid action is desired the intramuscular route is recommended.

**ADRENOXYL** is now available in boxes of 6 or 50 ampoules; tubes of 25 tablets or bottles of 500 tablets.

The esters in Transvasin, a new preparation developed by Hamol S.A., our Swiss associates, readily pass the skin barrier in therapeutic quantities and enable an effective concentration of the drugs to be built up where they are needed.\*

Transvasin not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant, and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

"This was by far the most effective and useful orally administered agent for reducing blood-pressure which we have yet used. In our opinion this substance is fully worthy of a trial in every case of essential hypertension in which treatment is thought to be necessary. The severe cases, which always need treatment, are as likely to respond as the mild".

*British Medical Journal (1955) 1 : 809*

'Rauwiloid' is a selected fraction of the alkaloid hydrochlorides of *Rauwolfia serpentina*, and combines the hypotensive activity of reserpine and rescinnamine with that of the other desirable alkaloids of the crude drug. 'Rauwiloid' should be regarded as the basic treatment for all grades of hypertension.

If sufficient lowering of blood-pressure is not apparent after 2/3 weeks use, 'Rauwiloid + Veriloid' and 'Rauwiloid' + Hexamethonium, tried in that order, are suggested as suitable agents. In each case 'Rauwiloid' reduces the side-effects of the potent antihypertensive, and in both combinations dosage is regulated solely by the patient's requirements for the more potent agent.

Dosage of 'Rauwiloid' is simple — two tablets at night are usually sufficient, and this dosage can be reduced to one for maintenance therapy.

## Availability of Vitamins in Yeast

Deficiencies of single factors of the Vitamin B Group do not occur. Accordingly, even if a deficiency condition appears to result from the lack of an individual factor of the group and it is considered necessary to give intensive treatment with this factor, *the entire Vitamin B complex should always be administered concurrently.*

It is, however, extremely important, in view of suggestions in recent publications, that the vehicle selected as a source of the entire B Complex does not withhold its vitamin content from the patient.

Human experiments show that the rich, natural vitamin potency of Aluzyme is totally available to the human system.

- Aluzyme is not advertised to the public and may be prescribed on Form E.C.10
