**... the virtues of  
LUCOZADE**

It is realised that the doctor judges Lucozade from two viewpoints. He agrees with its use in the sickroom. He also, personally, finds it a most palatable drink. This palatability of Lucozade provides a long-sought answer to a long-standing problem... acceptability. The subtle balance between flavour, sparkle and liquid glucose content provides nourishment acceptable to the feeblest digestion. Many doctors have discovered for themselves the virtues of Lucozade after a hard round of work.

The esters in Transvasin, a new preparation developed by Hamol S.A., our Swiss associates, readily pass the skin barrier in therapeutic quantities and enable an effective concentration of the drugs to be built up where they are needed.\* Transvasin

not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant, and can be safely used on delicate skins. It is now being widely prescribed with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

*“No—there’s a big difference, Mr. Baxter . . .*

*. . . as you will remember, in protamine zinc insulin, the action of the insulin is modified by the presence of a foreign protein, protamine. In contrast, I.Z.S. contains no protein or peptide material other than the insulin itself. That is its great advantage over other insulins. You see, gentlemen, the action of I.Z.S. persists for the required period by appropriate adjustment of the particle size of the insulin zinc compound. It is because the effect of I.Z.S. is entirely independent of any modifying protein, that allergic reactions following its use are virtually unknown. Any other questions?”*

## The key to successful peptic ulcer treatment

# NULACIN

Nulacin effectively controls gastric acidity. The value of Nulacin in the treatment of peptic ulcer and the prevention of relapse has been confirmed by clinical studies in Great Britain, Australia, the U.S.A. and India. Nulacin tablets are palatable and convenient.

### INDICATIONS

Nulacin tablets are indicated whenever neutralization of the gastric contents is required: in active and quiescent peptic ulcer, gastritis, gastric hyperacidity.

Beginning half an hour after food, a Nulacin tablet should be placed in the mouth and allowed to dissolve slowly. During the stage of ulcer activity, up to three tablets an hour may be required. For follow-up treatment, the suggested dosage is one or two tablets between meals.

Nulacin tablets are not advertised to the public, have no B.P. equivalent and may be prescribed on E.C.10. The dispensing pack of 25 tablets is free of Purchase Tax. (Price to pharmacists is 2/-.) Also available in tubes of 12.

Nulacin tablets are prepared from whole milk combined with dextrans and maltose, and incorporate Magnesium Trisilicate 3.5 grs.; Magnesium Oxide 2.0 grs.; Calcium Carbonate 2.0 grs.; Magnesium Carbonate 0.5 grs.; Ol. Ment. Pip. q.s.

## **DIAMOX** in **Pre-eclamptic toxæmia**

Toxaemia is still a major obstetrical complication, and early clinical signs of the condition are often associated with retention of water and sodium. DIAMOX acetazolamide is not only a powerful diuretic, but it also increases sodium excretion. Recent tests show that DIAMOX with a low salt diet significantly decreases the symptoms of pre-eclamptic toxæmia<sup>1,2</sup>. Reports also show that in early toxæmia and hypertensive vascular disease, DIAMOX improves the condition, as indicated by loss of weight, reduction of oedema, decrease of albuminuria and a fall in blood pressure. In these trials, side reactions have been negligible and no effect on foetal viability has been observed.

## PROLONGED ACTION...

8 to 24 hours of allergy relief from a single dose of **DI-PARALENE**  
REGD.

Allergy patients like the convenience, effectiveness and economy of this longer-acting antihistamine. Clinical reports show that DI-PARALENE, with its piperazine side chain rather than one of the conventional type, in many cases provides twenty-four hours of relief with a single dose.

Administer DI-PARALENE initially in 50 mg. doses three times a day for the average adult patient. In the majority of cases, the dosage can soon be reduced to once or twice a day. 50 mg. at bedtime often provides symptomatic relief throughout the night and frequently no additional dosage is required until the next bedtime. Side-effects are comparatively few and mild. Prescribe this longer-acting DI-PARALENE on your difficult allergic conditions. It is available in 50 mg. *Filmtabs* in bottles of 25, 100 and 500.

DRAMAMINE\* IN VERTIGO

# Labyrinthine Disturbance

*Long recognised as a standard for the management of motion sickness, Dramamine has become accepted in the control of a variety of other clinical conditions characterised by vertigo.*

Vertigo, it has been claimed, is primarily due to a disturbance of those organs of the body that are responsible for body balance. When the posture of the head is changed, the gelatinous substance in the semi-circular canals begins to flow. This flow initiates neural impulses which are transmitted to the vestibular nuclei. From this point impulses are sent to different parts of the body to cause the symptom complex of vertigo.

Some impulses reach the eye muscles and cause nystagmus ; some reach the cerebellum and skeletal muscles and righting of the head results ; others activate the emetic centre to result in nausea, while still others reach the cerebrum making the person aware of his disturbed equilibrium. *Vertigo may be caused by a disease or abnormal stimuli of any of these tissues involved in the transmission of the vertigo impulse, including the cerebellum and the end organs.*

A possible explanation of Dramamine's action is that it depresses the overstimulated labyrinthine structure of the inner ear. Depression, therefore, takes place at the point at which these impulses, causing vertigo, nausea and similar disturbances, originate. Some investigators have suggested that Dramamine may have an additional sedative effect on the central nervous system.

Repeated clinical studies have established Dramamine as valuable in the control of the symptoms of Menière's syndrome, radiation sickness, hypertension vertigo, the vertigo of fenestration procedures, labyrinthitis and vestibular dysfunction associated with antibiotic therapy, as well as in motion sickness.

Any of these conditions in which Dramamine is effective may be classed as "disease or abnormal stimuli"† of the tissues including the end organs (gastro-intestinal tract, eyes) and their nerve pathways to the labyrinth.

Dramamine (brand of dimenhydrinate) is supplied in tablets of 50 mg. in bottles of 12, 36, 100 and 1000 tablets and in cartons (10 strips of 10 tablets). G. D. Searle & Co., Ltd., 83, Crawford Street, London, W.1.

**Scott's**  
TWIN-PACK  
**baby-cereal**

Scott's Twin-Pack feeds, protects, soothes and educates. It feeds because each ounce gives over 100 calories. It protects and soothes because it is fortified by the addition of Vitamin D, calcium and trace elements, whilst it also contains Vitamin B<sub>1</sub> which is associated with the development of healthy nerve tissues. Moreover, Scott's Twin-Pack is easily digested and assimilated. Finally, Scott's Twin-Pack helps to educate baby's taste and pave the way towards a full varied diet, because each of the two cereals has its own distinct flavour.

Scott's Twin-Pack consists of pre-cooked and prepared oats and wheat, each in a separate waxed paper container, within the specially protected outer pack. It accords perfectly with modern teaching of the early addition of solids and variety to a baby's diet.

# The ONLY CHEESE containing Lactobacilli in ACTIVE FORM

It is true that no other cheese is like St. Ivel, not only is this because no other cheese has the delicious Cheddar flavour and creamy texture, but also because it is the only cheese containing Lactobacilli in active form.

The reason for this is that instead of using an ordinary cheese starter of lactic streptococci, a culture of specially selected strains of Lactobacilli is used. The cultures are maintained by professional bacteriologists with specialized knowledge of bacterial selection and genetics.

Great importance is attached to this aspect and to the nutritional requirements of the Lactobacilli so as to maintain the activity of the culture in the cheese after manufacture, and to ensure maximum therapeutic value.
