MEPROBAMATE

of far-reaching value in medical practice

Laboratory and clinical trials show MILTOWN to be the most remarkable tranquillizing drug yet discovered. Published reports on its initial success have been followed by its widespread adoption by doctors throughout America for restoring tranquillity in tension states, anxiety, stress and allied conditions. MILTOWN is now made available in Great Britain by Lederle.

Its value in the above conditions is due to an easing of the patient's anxiety tension, a lowering of irritability and its pronounced muscle relaxant action. It calms the patient for natural sleep. It has given a high proportion of good results in terms of relief of symptoms and a return to social productivity. It has proved effective in patients who have failed to respond to barbiturates and other conventional tranquillizers.

MILTOWN is fully active by mouth, shows a significant absence of toxicity and almost complete freedom from side effects. Among the conditions in which it has given good results are: Tension states, acute and chronic anxiety states, menstrual stress, tension headache, alcoholism, behaviour problems in children, hysteria and depression. In neuropsychiatric cases it has restored or improved patients who were delusional, assaultive, noisy, disoriented and hallucinated.

MILTOWN

(2-methyl-2-n-propyl-1,3-propanediol dicarbamate) is supplied in tablets of 400 m.g. for oral use. Bottles of 50.

for fungus infections of the smooth skin

Specifically indicated in the treatment of
TINEA PEDIS and TINEA CRURIS
SUBLAMIN is the ideal fungicidal lotion for the treatment of Tinea Pedis, Tinea Cruris, and other fungus infections of the smooth skin.

ACTIVE INGREDIENTS
Acid. Benz. 4.825%
Acid. Salicyl. 3.015%
Benzalkonium Chloride050%
Cetyl Pyridinium Chloride050%

SUBLAMIN has the following advantages :

The excipient evaporates quickly, leaving the therapeutic substances, in finely particulate form, in intimate contact with the affected areas. In consequence, the maximum destructive effect on the invading fungus is rapidly achieved. Being non-greasy SUBLAMIN obviates the need for dressings and will not promote the growth of secondary infective organisms. Its application is extremely simple.

Elastoplast

Airstrip

Waterproof yet non-occlusive, this new Adhesive first-aid dressing PREVENTS MACERATION

Elastoplast Airstrip is made from a specially developed plastic material which is not perforated but consists of a microporous extensible filter. Sweat

and skin exudates evaporate through this air-permeable dressing at the same rate as they develop on the skin. At the same time this new dressing is waterproof, preventing water, grease and oil from coming in contact with the wound.

Airstrip allows the wound to "breathe"; therefore maceration cannot develop. Because the surface of the wound and surrounding skin remain dry, the dressing can be left on until the wound heals—which it does under ideal dry conditions.

The air-permeable Elastoplast Airstrip dressing prevents development of maceration. Healing takes place in minimum time.

SPOONFOODS

STRAINED AND HOMOGENISED MEATS, FRUITS AND VEGETABLES—IN GLASS JARS

Weaning is always a perplexing process for the mother. *What* to give is comparatively simple. *How* to give it—or more important still, how to prepare it—is more difficult because of the small quantities involved and the need for strict hygiene. Spoonfoods are the solution to this problem. Many varieties are available and they are packed in convenient quantities in glass jars. The jars are sealed and sterilised, so ensuring very high protection. Because the foods are packed in glass jars, they are likely to overcome the objections which so many mothers have to "tinned foods" for babies.

Quite a challenging hypothesis, Doctor, but your young patients would wish the point to be illustrated dramatically. Especially since the administration of the new TERRAMYCIN syrup is quite the most convenient, safe and palatable way to combat a wide range of bacterial, viral, and rickettsial infections. Hydrolysing quickly in the gastro-intestinal tract TERRAMYCIN Syrup readily yields the pure antibiotic in powerfully effective concentrations. Isn't this the way you —*mutatis mutandis*—would prefer to take your own medicine? Of course it is. And that is why you will have no difficulty in persuading paediatric patients that TERRAMYCIN Syrup is "very good medicine indeed". Even the most recalcitrant youngster will be won over by its pleasing cherry flavour.

The serious disadvantage associated with the oral dosage of *plain* aminophylline—acute gastric distress—has been overcome. A high blood level of the active component, theophylline—such as could be obtained satisfactorily only by parenteral administration—is now possible. 'Theodrox' contains aminophylline combined with specially prepared aluminium hydroxide, and gastric discomfort is reduced to a minimum. When a degree of sedation is also required, tablets of 'Theodrox' With Phenobarbitone (containing gr. ½ phenobarbitone) are indicated.

'Theodrox' tablets each contain gr. 3 aminophylline, and both forms of 'Theodrox' are available in bottles of 25, 100 and 1,000.

OVER five years experience in general practice and in the hospital has established Chloromycetin* as a potent and reliable antibiotic. In many serious respiratory and genito-urinary tract infections it offers the best chance of success as the following reports indicate:

Acute Laryngotracheobronchitis

January, 1955

Owing to its wide range of antibacterial activity, Chloromycetin "is the drug of choice in the treatment of laryngotracheobronchitis" . . . in which "the infecting organisms are either penicillin-insensitive or usually penicillin-resistant."

Med. Press 233:485, 1955

Septic Abortion

May, 1955

In a review of 995 cases of septic abortion treated in a special puerperal sepsis unit, a number of cases were due to infection with coliform organisms or penicillin-resistant staphylococci. "Since 1951" state the authors "we have been impressed with the efficacy of Chloromycetin in this type of case."

Brit. med. J. 2:1239, 1955

Staphylococcal Empyema

July, 1955

12 of 13 cases of penicillin-resistant staphylococcal pneumonia in infants and children, complicated by lung abscess and empyema, responded dramatically to Chloromycetin—"the most effective drug". Chloromycetin was indicated by *in vitro* sensitivity tests in all cases in this series.

Canad. M.A.J. 73:787, 1955

Acute Pyelonephritis in the Diabetic

September, 1955

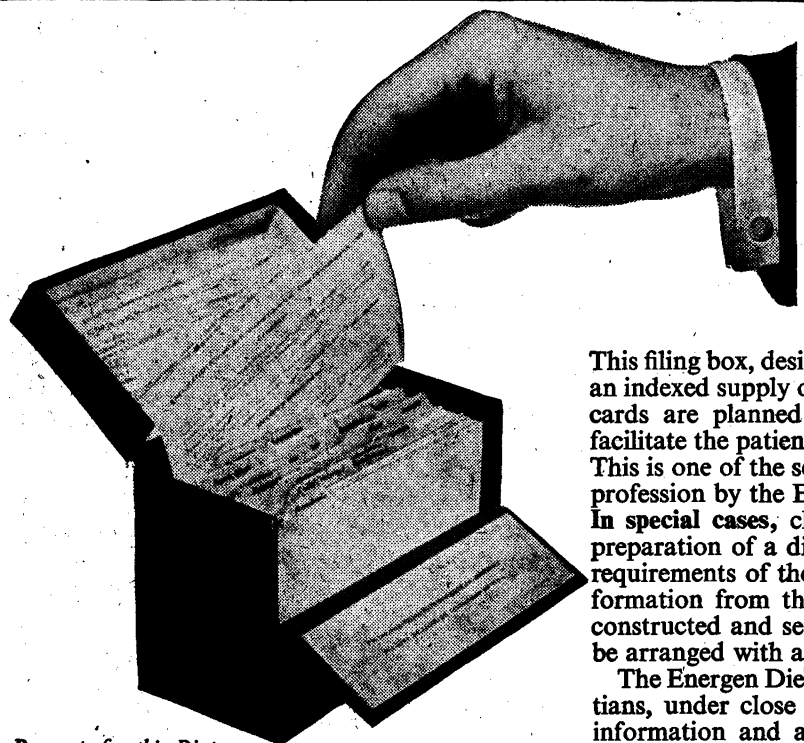

In a "condition which in most cases would otherwise be fatal", it is desirable to use an antimicrobial agent likely to be effective against the common urinary pathogens as well as organisms liable to produce secondary infection. "Chloromycetin offers the best chance of success and it is more likely to clear the infection with the first intensive course of treatment."

For the treatment of fungal infections of the skin, including athlete's foot and ringworm, Penotrane has been shown in clinical practice to produce most rapid results and maximum relief. In tinea pedis particularly, the incidence of relapses which is one of the most troublesome factors, is greatly reduced (*Practitioner*, 1956, 176, 670). Penotrane solution should first be applied to the affected areas, then followed, after the solution has dried, by a liberal use of the dusting powder, especially between the toes. If continued application of the solution causes the tissues to become brittle and scaly, it should be replaced by the emollient Penotrane jelly.

NEUTROGENA (pH 7.5) SOAP

neutralizes acids and alkali

Based on the research of Machebouef & Robert of the Institute Pasteur of Paris, and formulated by Dr. Edmond Fromont of Brussels.

DOES NOT DRY THE SKIN

Normal toilet soaps are often not suitable for the epidermis, as their pH, being above 9.5, causes air-oxidation of the keratin, which may bring about peeling and wrinkling of the skin, and consequently premature ageing.

Neutrogena Soap eliminates this, as, being practically non-alkaline, the skin retains its natural protective oils during and after washing.
