Side reactions in antiepileptic therapy have long had a limiting effect on seizure control. PEGANONE, a hydantoin derivative, is unusually free from these limiting side effects and yet it is potent enough for the control of many seizures.

In control of *grand mal* seizures PEGANONE was found most effective—but it is also useful in con-

trolling psychomotor seizures. PEGANONE has proved to be compatible with all known anticonvulsant medications.

The Abbott anticonvulsant range comprises PHENURONE, GEMONIL, TRIDIONE and PARADIONE in addition to PEGANONE. A complete study of the range is available on request.

# GRISOVIN

*(griseofulvin Glaxo)*

## The first oral treatment for fungal infections of the skin

Systemic therapy of intractable fungal infections of the skin has long been recognized to be the desirable form of treatment. It can now be achieved orally with griseofulvin, an antibiotic developed by Glaxo.

In extensive trials conducted in Britain, the U.S.A. and Austria griseofulvin given by mouth has demonstrated quite remarkable and consistent activity against dermatophyte

infections of the skin, hair and nails. Previously untreatable *Trichophyton rubrum* infections, some of many years' duration, have made a striking response to the antibiotic.

An introductory booklet on Grisovin is available. It summarizes existing knowledge, now accumulating rapidly, and provides a guide to treatment with this important new Glaxo antibiotic.

## A SPENCER SUPPORT for Intervertebral Disc

In both conservative and surgical treatment of intervertebral disc, application of a back support is usually indicated.\* We invite the surgeons' investigation of Spencer as an adjunct to treatment. Each Spencer is *individually designed, cut and made* for each patient—after a description of the patient's body and posture has been recorded and detailed measurements taken. Thus, individual support requirements are accurately met. The Spencer Spinal Supports shown incorporating rigid Spinal Brace were individually designed for both man and woman patients. The esters of NICOTINIC, SALICYLIC and  
**p-AMINOBENZOIC acids**  
 bring relief to cases of  
 arthritis and rheumatism

"Thank you, doctor"

IN CASES of soft-tissue rheumatism, and arthritic disorders, many doctors are tending more and more to regard Transvasin as an indispensable adjuvant to treatment.

For Transvasin is composed of the esters of nicotinic, salicylic and p-aminobenzoic acids. These esters readily pass the skin barrier in therapeutic quantities, and so enable an effective concentration of drugs to be built up where they are needed.\*

Transvasin not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

... it's quite important to remember the difference between the two. Globin insulin contains a foreign protein, globin, to modify the action of the insulin, whereas I.Z.S. contains no protein or peptide, other than the insulin itself. Let me stress once again, gentlemen, that the prolonged effect of I.Z.S. depends entirely on the appropriate adjustment of the particle size of the zinc insulin compound. It is because the effect of I.Z.S. is independent of any modifying protein, that allergic reactions following its use are practically unknown. That is precisely why I.Z.S. is so suitable as the single daily injection of insulin in a high percentage of diabetic patients. Any other questions?"

## an essential advance

### in chronic

In a trial of 'Stelazine' conducted in sixty chronic schizophrenics who had been ill for 1—32 years, 'improvement became noticeable approximately ten days after commencement of treatment. This was most striking in the fading of hallucinations, cessation of impulsiveness, an awakening of interest, a desire to take part in occupations and recreations of various kinds'.

*J. ment. Sci.* (1958), 104, 1195-98.

### and acute

'A similar pattern of response was found as with chronic patients, except that the response was more of a total one and all groups of symptoms tended to disappear more simultaneously. In those who had lost it, insight returned at a very early stage . . . Trifluoperazine would appear to be a cheaper and more pleasant method of treating acute paranoid schizophrenia than I.C.T., and just as effective, if not more so.'

**HIGH CONCENTRATION BY ORAL ADMINISTRATION**

The realization that vitamins of the B complex are co-enzymes in intracellular oxidations and phosphorylations has led to their use in high doses. Only by a raised concentration of these factors within the cell can disordered metabolic exchanges be rapidly restored to normal. Hence Orovite—elixir and tablets.

# 30 years of Progress in Milk Research

safeguard the progress of  
Britain's bottle-fed babies.

During that time the Central Research Laboratory of the United Dairies—today the Commonwealth's largest privately-owned dairy laboratory—has pursued and augmented the Company's "clean milk" policy. Among many notable achievements has been the laboratory's contribution to the development of full cream evaporated milk, whose value in infant feeding, even with prematures and in difficult conditions such as coeliac disease and infantile eczema, is becoming ever more widely recognised by the medical and nursing professions.

### UNIFORMITY

Regal Milk is standardised to contain at all times of the year, not less than 31% total solids of which 9% is butter fat.

that pharmaceuticals prescribed under the National Health Service should be economical in price. And in this respect, Fletchers' 'Effico' tonic need not fear comparison with any equivalent preparation. Its basic cost to the National Health Service is only 2/2½d. for an 8 fl. oz. bottle.

'Effico' tonic presents a well-balanced combination of vitamins, traditional stimulants and bitter stomachics in a pleasantly flavoured syrup base. It has proved a reliable restorative for the convalescent, the over-worked and the aged, and in post influenzal and similar conditions.

**TEN YEARS' EXPERIENCE**

**TELLS YOU**

**When the patient needs B<sub>12</sub>**

**SIMPLY GIVE B<sub>12</sub>**

When, ten years ago, Vitamin B<sub>12</sub> was isolated at Glaxo Laboratories, the complete control of pernicious anaemia became a certainty. Much experience since then has proved that the pure vitamin, given as Cytamen Injection or Cytacon Oral Liquid, will produce remission alone and unaided. But . . . there is a qualitative difference in the responses achieved.

In pernicious anaemia pre-treatment serum and tissue levels of B<sub>12</sub> are invariably low. The swiftest, most economical and most certain method of restoring these levels to normal . . . and of preventing insidious development of neurological complications . . . is by injection of Cytamen.

When, in very special circumstances, oral treatment of pernicious anaemia is unavoidable, 100 micrograms or more of B<sub>12</sub> in solution, daily, as in Cytacon, needs no help from any other substance. The principal use for oral B<sub>12</sub> is, of course, in conditions other than pernicious anaemia: deficiency of B<sub>12</sub> absorption is not then in question and Cytacon in lower doses is the rational preparation to prescribe.

In short, when your patients need B<sub>12</sub>—in pernicious anaemia, Cytamen for *certain*—in other conditions, simply Cytacon.

## *An effective pattern of protection . . .*

The increasing use of inoculation against Poliomyelitis does not dispense with the necessity for using other proved methods of prevention.

On the contrary—such methods should be more widely and more thoroughly applied.

'In Poliomyelitis epidemics, where a large proportion of the virus hosts are symptomless carriers—a vigorous health education programme... directed at raising the standards of personal hygiene... coupled with measures to raise individual resistance to Poliomyelitis virus infection by strengthening active immunity, offers best hope of success.'<sup>1</sup>

For inactivating Poliomyelitis virus, 'Oxidising agents seem to be the most active chemical disinfectants.'<sup>2</sup>

'An oxidising agent of great potency is Domestos which, when used at concentration of from  $\frac{1}{2}$  to 2 ozs. per gallon, provides a level of available chlorine in the range 150 to 1,200 parts per million—sufficient to inactivate the Poliomyelitis virus.'<sup>3</sup>

'A pattern of protection against Polio is assured by using DOMESTOS, which destroys Poliomyelitis virus—

(a) *For Lavatories.* Overnight contact will destroy heavy soiling and give a free residual chlorine content which will inactivate virus contaminants. The exterior of the bowl and the seat which frequently come into contact with the hands of children, should always be washed with a DOMESTOS solution

(b) *For the disinfection and cleaning of dishes, floors, kitchen surfaces, sinks, etc.*

(c) *For safeguarding against the infection of food by bluebottles, flies, vermin.*

(d) *For the disinfection of yards, paths, etc.*

(e) *For the disinfection and cleaning of clogged drains.*

# Only Nulacin provides intragastric milk-alkali drip therapy for the ambulatory patient

“In view of the ineffectiveness of most of the tableted antacids, the milk alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

(*Medical Times* 1958, 1, 74)

**NULACIN TABLETS** have been developed so that when allowed to dissolve slowly in the mouth, they give continuous milk-alkali drip therapy and provide a treatment of peptic ulcer and other conditions associated with hyperacidity. The effectiveness of Nulacin therapy has been established by clinical work in many countries. The following are a few references to the literature.
