The esters of NICOTINIC, SALICYLIC and p-AMINO BENZOIC acids bring relief to cases of arthritis and rheumatism

IN CASES of soft-tissue rheumatism, and arthritic disorders, many doctors are tending more and more to regard Transvasin as an indispensable adjuvant to treatment.

For Transvasin is composed of the esters of nicotinic, salicylic and p-aminobenzoic acids. These esters readily pass the skin barrier in therapeutic quantities, and so enable an effective concentration of drugs to be built up where they are needed.*

Transvasin not only induces vasodilation of the skin with a superficial erythema, but also brings about a deep hyperaemia of the underlying tissues. It is non-irritant and can be safely used on delicate skins.

It is now being widely prescribed, with successful clinical results. Since a very small quantity is sufficient for each application, the cost of treatment is extremely low.

Only Nulacin provides intragastric milk-alkali drip therapy for the ambulatory patient

“In view of the ineffectiveness of most of the tableted antacids, the milk alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

(Medical Times 1958, 1, 74)

NULACIN TABLETS have been developed so that when allowed to dissolve slowly in the mouth, they give continuous milk-alkali drip therapy and provide a treatment of peptic ulcer and other conditions associated with hyperacidity. The effectiveness of Nulacin therapy has been established by clinical work in many countries. The following are a few references to the literature:

Laxatives for Children

AS A LAXATIVE for children Andrews has characteristics which have commended it to many physicians. A brief restatement of them may be helpful.

The laxative action of Andrews is mild, and is due to the presence of magnesium sulphate and other salts in balanced proportion. Their effect is to increase the fluid in the bowel by osmosis. There is no irritation of the intestine. Evacuation is easy, and without griping.

Andrews has a pleasant taste, and children accept it readily. Dosage is easily adjusted according to age.

It is mildly antacid, stimulates bile flow, and aids digestive processes. It is also useful as a gastric sedative in bilious attacks.

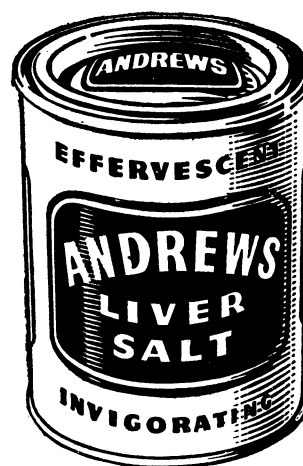

Andrews gives rise to no costive reaction when discontinued.

NaClex can be used for every diuretic purpose. In the serious case it virtually replaces injections because it produces rapid and copious fluid loss. It is just as useful in milder cases and for continued maintenance.

'Medihaler'

The first product to apply the principle of pressurised aerosol to inhalation therapy. The 'Medihaler' is an appliance possessing almost every worthwhile feature required in inhalation therapy.

RIKER

1 OPTIMUM PARTICLE SIZE The Particle size is important. On it depends the amount of the drug that reaches the lower respiratory tract *and remains there*. The critical size for particles is from 2 to 5 microns diameter. OVER 80% OF THE PARTICLES PROPELLED THROUGH THE 'MEDIHALER' ARE OF THIS DIAMETER RANGE.

2 A POWDER AEROSOL Powder aerosols are superior to liquid sprays. They usually produce more rapid effects and they do not increase the fluid volume in the respiratory tract. 'Medihaler' particles are suspended in an inert, propellant liquid. On projection the liquid vaporises instantaneously leaving the particles of *powder* fully suspended, their homogeneity unimpaired.

3 SIMPLICITY IN OPERATION The 'Medihaler' can be used at any time, anywhere, in any circumstances by any person, old or young.

4 NEUTRAL AEROSOL Many established nebuliser solutions have a strong acid reaction. These solutions on prolonged usage can cause damage to the bronchial mucosa. The 'Medihaler' powdered aerosols are quite neutral.

5 A MEASURED DOSE The special metering valve incorporated in the 'Medihaler' provides a measured dose at each operation — an important factor in the use of potent anti-asthmatic drugs — and one inhalation is usually all that is required.

6 STABILITY AND STERILITY OF CONTENTS The stainless steel container of the 'Medihaler' is sealed except when the spray is released.

7 ROBUSTNESS The 'Medihaler' cannot be broken with normal usage.

THE 'MEDIHALER' CAN BE CARRIED IN THE WAISTCOAT POCKET AND USED WITH PRESS-BUTTON SIMPLICITY.

'Medihaler', 'Medihaler Iso' and 'Medihaler Epi' are registered trade marks of —

ANNOUNCING

'Medihaler'

CORT

Hydrocortisone acetate by inhalation for the prophylactic treatment of bronchial asthma.

'Medihaler' Cort reduces the frequency of asthmatic attacks and curbs the severity of any attacks that might take place

RIKER

The response is most marked in the absence of hypersecretion, i.e. in cases of "dry" asthma. By inhalation of the insoluble salt, hydrocortisone acetate, response to steroid therapy in bronchial asthma is achieved on a relatively small dosage schedule. Though steroids have proved of value in the treatment of asthma when given orally, the relatively high doses necessary by this route give rise in long term administration, to symptoms of hypercorticism.

DOSAGE The recommended daily dose of hydrocortisone acetate by inhalation is 10 to 15 mg. This involves taking 6 to 10 inhalations of 'Medihaler' Cort per day at equally divided intervals.

CONTRA-INDICATED In Tuberculosis, peptic ulcer, or a history of mental illness.

NOTE For giving *immediate relief* in a crisis, 'Medihaler Iso' and 'Medihaler Epi' are the preparations of choice.

'Medihaler Iso' contains Isoprenaline Sulphate, B.P. well-known for its bronchodilating effect. Given by inhalation this effect is profound and rapid. It is said that isoprenaline is 100 times more effective by inhalation than when administered orally or sublingually. The side effects associated with isoprenaline therapy are minimal, when it is administered by inhalation. 'Medihaler Iso' propels a dose of 0.075 mg. of the drug at each single operation.

'Medihaler Epi' contains Adrenaline Bitartrate B.P. and is indicated for routine use in acute asthma. Each propelled dose delivers the equivalent of 0.15 mg. of adrenaline base.

NOTE Each vial contains approximately 200 doses of 'Medihaler Epi' and 'Medihaler Iso' which provides, on the basis of three doses a day, approximately two months treatment.

The first factor is provided by diethylamine salicylate, which has been shown to have an absorption rate 300-500 times greater than methyl salicylate.*

The second factor is glycol salicylate, which has been shown to have a remarkable affinity for lipid tissue, ensuring a deposit of salicylate ions, the slow release of which prolongs the action of the quicker acting diethylamine salicylate.

The local effect of these salicylates is to begin their therapeutic action at the site of the lesion. By plain incision, about 80% of the salicylate content of the cream is taken up into the body and about 60% is excreted in the urine.

Treatment
'SALURIC' and
'INVERSINE'

Q. What are the main advantages of using 'Saluric' as well as 'Inversine'?

A. 'Saluric' potentiates the *hypotensive* action of 'Inversine' and allows a smaller *effective* dosage of 'Inversine' to be used, with a consequent reduction in ganglion blockade side-effects.

Q. What is the best method of administering these drugs?

A. By commencing with 'Saluric' (dosage range 0.5-1.5 G. daily) and adding 'Inversine' (2.5 mg. twice daily initially).

Q. What if the patient is *already receiving* 'Inversine'?

A. *Immediately* 'Saluric' is administered, the existing dosage of 'Inversine' is reduced by 25 to 50 per cent. and re-adjusted later, according to the patient's response.

Q. Can 'Saluric' be used with other hypotensive agents?

A. 'Saluric' can be used concurrently with other ganglion blocking agents (e.g. hexamethonium, pentolinium and pempidine) as well as with rauwolfia derivatives and hydralazine.

nausea Antipyretic
Sedative

"CODIS" is a combination of aspirin, phenacetin, and codeine phosphate—a combination well known and accepted medically as giving pain relief in a wide range of conditions.

The unique feature of the tablets is that the aspirin is soluble in water. The codeine and phenacetin are also soluble, and the phenacetin is in very fine suspension.

To ensure stability and easy identification, the tablets are wrapped in moisture-proof distinctive gold foils of 10 tablets each (dispensing size), or boxes containing five foils of 4 tablets each (public size).

CODIS AND SOLUBILITY

THE GREAT ADVANTAGE of Codis is that it provides a codeine compound tablet in which the aspirin content is soluble in water. (The codeine constituent is also soluble, and the phenacetin is in very fine suspension.)

This is achieved by careful compounding and preparation, resulting in tablets which are quickly absorbed and well tolerated—even in cases of proven intolerance to ordinary (insoluble) aspirin.

To ensure stability and easy identification, the tablets are wrapped in moisture-proof distinctive gold foils of 10 tablets each (dispensing size), or boxes containing five foils of 4 tablets each (public size).

in Restricted Diets

In the dietary control of obesity, diabetes or other conditions a reduced intake of vitamins may lead to complications. Addition of Marmite to these restricted diets supplements their content of B vitamins and adds flavour to meals which are apt to be dull and uninteresting.

in Preventive Medicine

The prominent part played by diet in preventive medicine is now fully recognised. A well-balanced diet can contribute markedly to general good health and, conversely, a faulty diet can precipitate illness and hinder recovery. Marmite is a useful protective food providing the important B vitamins in a convenient and appetising form.

Are you a bookcase?

Symptoms

The symptoms vary. Sometimes an infuriated wife with a bad attack of *volumi dustus* is the only active irritant, but in severe cases, a serious distortion of the *shelfi noktup* may result in its complete collapse, causing a possible fatal attack of hysterics on the part of the wife (or landlady) and severe shock to the patient.

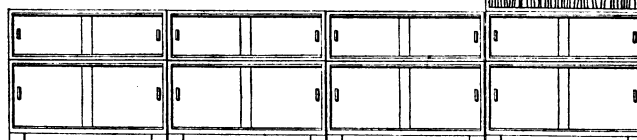

Treatment

The patient should, if possible, give up reading, but as this often leads to an alternative habit which may set up *Teevtywitch* or "Box Goggle", the patient is better advised to take the Minty treatment. This consists of installing a beautifully designed dust-proof bookcase which protects both the contents and the book "case". As the treatment is likely to be necessary until the Last Will & Testament stage, the expanding, "interlocking" Minty is recommended, as it offers an endless variety of space and arrangement, and, as the makers say, is always complete—but never finished. You can begin a Minty library for as little as £9.2.0—and on deferred terms, if you wish.

Only at Minty showrooms can you see and buy Minty bookcases (and furniture); only by this *direct* selling from Minty to you can Minty offer you such fine furniture at such moderate prices. There are seven Minty showrooms each within reasonably easy reach of most people, but if for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Sound reasons for this prescription . . .

54

Whenever you prescribe on E.C.10. in the wording shown above, you are safeguarding the well-being of your patient—and aiding the N.H.S.

MAXIMUM SUPPORT

By prescribing Lastonet Elastic Net Stockings, you secure for your patient the maximum comfort and beneficial support—possible only when a stocking is made (as *all* Lastonet stockings are made) to perfect fitting, accurate individual measure.

MINIMUM COST

Besides being superior in efficiency, Lastonet Elastic Net Stockings are low in initial cost. Because a *new, light-resistant rubber* is now used in their make-up, this lessens the deterioration occurring when rubber is exposed to light. These two factors make Elastic Net the

most economical form of surgical stocking for N.H.S. prescription.

HOW TO PRESCRIBE

The words "Elastic Net Stockings" *must* be written on E.C.10. Also the quantity required, and whether thigh or knee length, when prescribing for supply under N.H.S.

In Hypertension
RAUWILOID

reduces the pressure gradually and safely....

Of *proved* value in the treatment of mild to moderate hypertension, 'Rauwiloid' is a purified and standardized fraction of *Rauwolfia serpentina* in tablet form. It lowers elevated blood pressure *gradually*, slows the pulse rate, and so reduces cardiac effort. A calm, tranquil sense of well-being is induced, without drowsiness, and with little impairment of alertness. Dosage is not critical, and there are no important side-effects or contra-indications. Mental depression is unlikely to be encountered when 'Rauwiloid' is used in the recommended dosage. It is the medicament of choice for hypertension in its early stages, in order to arrest progression.
