Tofranil[®] Geigy Thymoleptic
**Specific
therapeutic
measure for the
treatment of the
depressive state**

Thymoleptic

The mode of action of Tofranil differs from that of all previous drugs used in the treatment of depression. To describe the specific action that Tofranil exerts on the depressive syndrome a new classification has been introduced—**thymoleptic** or "mood-regulating" drugs. Tofranil is neither a stimulant nor a tranquillizer but modifies the basic processes of the depressive illness.

Tofranil

Tofranil, the first thymoleptic, is the result of many years experimental research and clinical investigation. Tofranil is capable of replacing E.C.T., affording a basic advantage for the "intellectual" patient where possible loss of memory or confusion would be particularly undesirable.¹

Melancholia

Tofranil is specific for endogenous depression; reactive depression, and depression associated with other psychiatric states have also shown a high degree of therapeutic response. The main features of the depressive syndrome are characterized by: Tiredness; Heaviness of the limbs; Feeling of oppression; Retardation; Inhibition; all these features together being worse in the morning and slightly better at night.

Clinical results

In Great Britain clinical evaluation of Tofranil and widespread practical experience resulting from the treatment of over 100,000 individual diagnosed depressive patients have confirmed the 60–70% success rate reported by earlier workers.

A controlled trial¹ found Tofranil to be therapeutically effective in 74% of patients suffering from endogenous depression and in 59% of patients with reactive depression.

¹Brit. med. J. 2, 1052 (1959)

Allergic conditions

**A more potent antihistaminic—rapid,
strong, and prolonged in its action...
with no serious side-effects**

Of the many antihistamine compounds available today, Daneral is exceptional for its strong, rapid, and prolonged action. Even small doses are sufficient to counteract the histamine effects that occur in antigen-antibody reaction. Daneral also has a strong antispasmodic action; it also reduces capillary permeability.

It is exceptionally free of toxic side-reactions and has no pronounced action on blood-pressure or vascular resistance.

Indications: Extensive clinical trials have established the effectiveness of Daneral in most allergic conditions. It also has value in many conditions that have no clear allergic origin or tissue reaction.

In *hay fever* and vaso-motor rhinitis Daneral is especially effective. In *dermatology* it is used in urticaria and angioneurotic oedema; serum reactions; drug allergy; pruritus. In *general medicine* bronchial asthma and cardiac asthma are helped by Daneral.

Packs: 10 mg. tablets—tubes of 20 and bottles of 250.

Eczema (INFECTIVE)

Acute Infective Eczema before treatment

After 5 days' treatment (Cambison 0.5% twice a day)

Steroid ointments are frequently successful in varieties of eczema that have resisted other therapy

They have the advantage of being anti-allergic, anti-inflammatory and anti-pruritic. Even severe itching is usually relieved in a few hours, and hyperaemia, swelling, and exudation reduced during the first day of treatment.

Cambison ointment combines the steroid prednisolone with a two-fold protection against infection. Not only does it include the antibiotic neomycin, which is highly effective against staphylococci and streptococci, but also a quinolylurea compound with chemotherapeutic action particularly directed against gram-positive organisms. This combination widens the antimicrobial spectrum and enhances the antibacterial effect.

Cambison is indicated in cases of acute and chronic eczema and dermatitis, particularly where infection is present or threatened.

Packs: Tubes of 5 G and 20 G. Available with prednisolone 0.25% or 0.5%

Eczema

*Chronic exudative eczema on back of the left hand.
Severe itching and weeping.*

Result after 2 days of treatment.

New ointment combines advantages of the corticosteroids with traditional ichthammol type therapy

In chronic dermatoses, steroid ointments alone do not always effect radical cures.

Tumeson (Tumenol Prednisolone Ointment) combines the advantages of the corticosteroids with more traditional therapy.

It has two components:—

Prednisolone 0.25%, with its well-known anti-inflammatory and anti-allergic properties.

Tumenol Ammonium, a bituminous shale tar-oil similar to ichthammol, which is widely used in sub-acute and chronic skin conditions. As well as having an anti-inflammatory and anti-pruritic effect, it is a vasoconstricting agent with fungicidal and bacteriocidal properties.

Where a rapid, pronounced and sustained anti-pruritic and anti-eczematous action is called for, Tumeson is especially useful.

Packs: tubes of 5 G. and 20 G.

Athlete's Foot

Ringworm of the feet

After 7 days' treatment with Jadit

An effective new treatment that is odourless and colourless

Fungus infections of the skin—and particularly 'athlete's foot'—still remain a prevalent cause of distress and morbidity. The need for a reliable and cosmetically acceptable local treatment is greater than ever before.

The advantage of Jadit (chlorhydroxybenzoic acid butylamide) is that it provides a potent fungicidal action that is practically unimpaired in the presence of tissue protein. It is elegant, simple and safe.

For inflammatory and allergic mycotic reactions, hydrocortisone is added

Jadit 'H' contains 0.5% of hydrocortisone, which has a reliable anti-inflammatory, anti-allergic and anti-pruritic action. In combination with Jadit's antimycotic action, hydrocortisone suppresses inflammatory reactions.

RESEARCH . . .

THE FUTURE . . .

AND HOECHST

The great German pharmaceutical company, Farbwerke Hoechst A.G., last year celebrated its seventy-fifth anniversary. It could look back on many outstanding developments in medical science that it had introduced—ranging from the first diphtheria antitoxin, to Rastinon, the established oral treatment of diabetes.

Today, in the Pharmacopoeia of every country are listed drugs originated at Hoechst; for example, in the British Pharmacopoeia 1958 are listed Procaine, Epinephrine, Mersalyl, Tetracaine, Pethidine, Methadone, and Normethadone, each one of which was discovered in the Hoechst laboratories.

300 graduate scientists — chemists, doctors, pharmacists — are employed by Hoechst in Frankfurt on pharmaceutical research alone. They work in ultra-modern laboratories, with all the equipment they could possibly need.

The promise from Hoechst is of even greater achievement in the discovery of new weapons against disease.

The problem of a substitute for breast milk, where a mother is unable to feed her baby herself, is most satisfactorily solved by giving Humanised Trufood. This is not an ordinary dried milk; it is cow's milk so modified that it closely resembles the natural food that a normal infant should have from birth—nothing need be added. As in human milk, lactose is the only carbohydrate present. The ratio of casein to soluble protein, as well as the total protein content, is remarkably close to that in human milk; and the high emulsification of the full fat content ensures perfect reconstitution. Further information can be obtained from Trufood Limited, 113 Newington Causeway, London, S.E.1.

Opinions may vary, but one thing is certain. If doctors are going to enjoy anything of the summer themselves, they are going to need something that cuts down the time spent on treating the numerous skin conditions they will meet. Conditions such as infected cuts, wounds and abrasions, sycosis, folliculitis, impetigo, and so on, respond well to ACHROMYCIN OINTMENT. DROXALIN^{Regd.} ACID ADSORBENT

*Palatability—plus remarkable
initial speed of action*

As a consequence of the wide and successful prescribing of DROXALIN TABLETS in gastric ulcer, hyperacidity and sickness of pregnancy, a demand arose for a liquid version of the DROXALIN formula.

Introduced in 1958 as DROXALIN GEL this liquid formulation already has made a high reputation and is now widely prescribed.

DROXALIN GEL is remarkable in its initial speed of action. Over the first two minutes, it is as much

as three times as effective as the most prescribed acid adsorbents—Aluminium-Hydroxide or a well prescribed mixture of Magnesium Trisilicate and Aluminium Hydroxide.

This initial speed of action is a potent factor in the management of gastric pain.

DROXALIN produces no acid rebound or other harmful side effects. The well known palatability of DROXALIN tablets is maintained in the Gel.

Availability of Vitamins in Yeast

Deficiencies of single factors of the Vitamin B Group do not occur. Accordingly, even if a deficiency condition appears to result from the lack of an individual factor of the group and it is considered necessary to give intensive treatment with this factor, *the entire Vitamin B Complex should always be administered concurrently.*

It is, however, extremely important, in view of suggestions in recent publications, that the vehicle selected as a source of the entire B Complex does not withhold its vitamin content from the patient.

Human experiments show that the rich, natural vitamin potency of Aluzyme is totally available to the human system.

ADRENOXYL

reduces the mean capillary bleeding time

Adrenoxyl is a capillary haemostatic which reduces the mean capillary bleeding time by increasing the contractility and resistance, and decreasing the permeability of the capillary wall.

Reduces capillary oozing

Reports have been received of the value of Adrenoxyl in diminishing capillary oozing both at the time of operation and post-operatively in many types of operation, including ear, nose and throat, ophthalmic, plastic and dental surgery. It has no effect on venous or arterial bleeding.

Safe and free from side-effects

Adrenoxyl is safe, and no side-effects have been reported following its use. It does not affect pulse rate, blood pressure, nor blood coagulation.

Packs

Adrenoxyl is available in ampoules for intramuscular or subcutaneous injection and in tablets for oral administration.

AMPOULES Each 2 ml. ampoule contains 0.75 mg. of

adrenochrome monosemicarbazone dihydrate. The ampoules are packed in boxes of 6 and 50.

TABLETS Each tablet contains 2.5 mg. of adrenochrome monosemicarbazone dihydrate. The tablets are packed in tubes of 25 and bottles of 500.

Corn Oil and Heart Disorders

ESSENTIAL UNSATURATED FATTY ACIDS

All fats and oils, whether animal or vegetable, can be defined as "natural blends of the glycerides of fatty acids".

Fatty acids are of two types — saturated and unsaturated. Three of the latter type are of particular importance in everyday diet and are known as the *essential* unsaturated fatty acids. It is established beyond all reasonable doubt that they are vital to the well-being of man, as they have been proved to be for certain animals. Some experts, indeed, consider that our present-day intake of them is dangerously low.

CORONARY THROMBOSIS

Of late, interest has been further stimulated by research and treatment of patients suffering from coronary thrombosis and other vascular disorders. The incidence of these disorders has been shown to be closely correlated with a high dietary "fat" intake. There is also a correlation between the incidence of vascular disease and a high level of cholesterol in the blood. It has been found, though, that this cholesterol level is effectively lowered by reducing the intake of saturated fatty acids (present in all fats) and increasing the consumption of essential unsaturated fatty acids. Many doctors treating heart patients now consider this advisable — and even imperative.

MAZOLA CORN OIL

MAZOLA Corn Oil comes from specially selected maize, which gives an oil rich in the most important of the essential unsaturated fatty acids — linoleic acid. Apart therefore from its own intrinsic merit as a cooking oil (it has long been popular for this purpose both in Canada and America) MAZOLA can be helpful in reducing blood cholesterol when this is unduly high.

MAZOLA is specially packed to eliminate the possibility of rancidity, oxidation and reversion to saturated fats. Also, existing evidence supports the belief that MAZOLA loses none of its therapeutic properties after cooking. It can therefore be strongly recommended as a substitute for all kinds of fat used in frying, baking or grilling. Salad dressings made with MAZOLA are excellent.

Finally, MAZOLA can if desired be taken "medically" — that is to say neat, in prescribed quantity.

APPOINTMENTS

Applicants should state name, address, age, nationality, qualifications, and enclose (unless otherwise specified) one copy each of 3 recent * testimonials with short statement of experience and appointments held.

Applications should be sent at once if no closing date is given.

House Officers should submit a separate application for each post for which they apply.

Canvassing of members of the Board or Advisory Appointments Committee will lead to disqualification (Statutory Instrument 1950, No. 1259, N.H.S.).

*SERVICE MEMBERS may have difficulty in supplying recent testimonials, but this should not deter them from applying.

A fully registered medical practitioner who is liable for National Service must obtain deferment of recruitment in writing from the Central Medical Recruitment Committee or (in Scotland) the Scottish Central Medical Recruitment Committee before accepting any civilian appointment.

The position of provisionally registered medical practitioners who are liable for National Service has been made clear in a notice sent to them by the Ministry of Labour and National Service.

THE ZOOLOGICAL SOCIETY OF LONDON**FORD FOUNDATION FELLOWSHIPS**

The Council of The Zoological Society of London invites applications for up to six research fellowships and studentships in animal reproduction which have been endowed by a grant from the Ford Foundation. Those who are appointed will be expected to contribute to the scientific understanding of reproductive mechanisms, but their choice of subject within this broad field will not be restricted. They will be provided with newly built and equipped laboratories at Regent's Park, but it is intended that they should be associated with the laboratory of an appropriate leading authority in their chosen field of study as well. There will be ample provision for research expenses and technical services, and special facilities for the study of the Society's collection at Regent's Park and at Whipsnade will be provided. Two types of appointment are contemplated. (1) Research Studentships. These are intended for recent graduates who wish to study the biology of reproduction and to receive research training which would lead to a Ph.D. degree. Salaries will range from £450 to £650 for up to three years. Applicants should provide the names of two referees and a statement of the branch of the subject in which they are interested. (2) Research Fellowships. These are intended to be post-doctoral fellowships, and applicants should already be experienced and capable of independent research. The appointments will be for periods of three to five years, and salaries will range from £800 to £1,850, according to experience, plus F.S.S.U. benefits. Applicants should provide the names of two referees and proposals for the programme of research which they wish to undertake, together with an estimate of the costs involved. Applicants should write to the Secretary, The Zoological Society of London, Regent's Park, London, N.W.1, who will be glad to give any further information. (3217)

It also contains laboratories for biochemical, bacteriological, and pathological research. Psychotherapeutic treatment is employed when indicated.

BRYN-Y-NEUADD HALL.—The seaside house of St. Andrew's Hospital is beautifully situated in a park of 330 acres at Llanfairfechan amidst the finest scenery in North Wales. On the North-West side of the estate a mile of sea-coast forms the boundary. Patients may visit this branch for a short seaside change or for longer periods. The hospital has its own private bathing house on the seashore. There is trout-fishing in the park. At all the branches of the hospital there are cricket grounds, football and hockey grounds, lawn tennis courts (grass and hard courts), croquet grounds, golf courses and bowling greens. Ladies and gentlemen have their own gardens, and facilities are provided for handicrafts such as carpentry, etc. For terms and further particulars apply to the Medical Superintendent (Telephone No.: Northampton 34354 (3 lines)), who can be seen in London by appointment.

Diet and Antenatal Care

During pregnancy nutritional deficiencies which may normally pass undetected are liable to produce frank clinical symptoms, as all demands on the maternal organism are increased. Thus fissures at the angles of the mouth may indicate an inadequate supply of vitamins of the B complex, particularly riboflavin. Special attention to the diet is therefore an important part of antenatal care.

Marmite yeast extract is a useful source of all known factors of the vitamin B complex. It is easily incorporated in the diet, as it can be added to soups, stews and other savoury dishes, or spread on bread and butter or hot toast, or taken as a drink in hot water or milk.
