

New literature on family planning

A recent survey has shown that over 70% of married women under 45 years of age are in favour of Family Planning, which explains why Doctors are receiving more and more requests for information.

These new booklets and leaflets give the latest information on conception control and will save Doctors' time when dealing with these enquiries.

The Condom as a Contraceptive. Written by the Director of Research at the National Committee on Maternal Health Inc., New York. This authority on the statistical evaluation of family planning analyses the effectiveness and acceptability of the condom in detail.

Modern Family Planning. A new booklet discussing the various methods of family planning written in simple language suitable for distribution to interested patients.

Diaphragm or Protective

A comparison of the two leading methods of conception control.

The case against Coitus Interruptus

An indictment of this method of conception control—its failure rate and its physical and mental effects.

The married woman's views on contraception. A survey based on facts revealed by a recent investigation of the opinions of married women about family planning.

Contraception—the facts about recent developments. An enquiry into the stage reached in the development of oral contraception—the advances to date, the interest of the general public, the known disadvantages and the long-term dangers.

Some criticism has, in the past, been levelled at Protectives on the grounds that they reduce sensitivity. A recent development by the London Rubber Company almost entirely overcomes such objections.

Professional samples of this new product, Durex Gossamer and copies of the leaflets listed above, will be sent on request, from

STANDARDIZED SENNA

CONSTIPATION IN MENTAL

"This condition is commonly found when elderly patients are admitted solely because of mental confusion. Relief of the constipation restores their mental equilibrium".

—Lancet, 1960, ii, 888.

A rational approach to the treatment of these cases is the use of the smallest amount of a stimulant laxative which acts in a physiological manner to give a comfortable formed motion.

Senokot standardized senna provides the means of *controlled* neuromuscular stimulation of peristalsis. *"The need for enemata is reduced—a great advantage when dealing with aged patients"*.

—Medical World 1955, 83, 318.

Granules: 56 G. (2 oz), 170 G. (6 oz), 900 G. (2 lb). **Tablets:** 50, 100, 200, 1000.

Senokot is half the cost of liquid paraffin and is the most widely prescribed stimulant laxative under the N.H.S.

POTENT NEW SEARLE ANTIHISTAMINE FOR FEVER

BETTER SYSTEMIC CONTROL
PRACTICALLY DEVOID
OF SIDE EFFECTS

MITRONAL, having a wide margin between therapeutic activity and the onset of side reactions, thus provides the physician with a better means of control of allergic disorders in both adults and children.

It is also a valuable alternative in patients who are unresponsive to or intolerant of other antihistamines.

In a clinical trial covering 546 patients, 73% obtained relief.

In two other trials totalling 673 cases the side effects of Mitronal did not exceed placebo range. Supplied as scored tablets containing 15 mg. Mitronal in bottles of 50 and 250.

Usual dosage 15 mg. three times daily, but up to 90 mg. daily may be given if necessary.

Basic N.H.S. Prices, bottle of 50 tablets 7/6, bottle of 250 tablets 33/4. Subject to Purchase Tax.

Adult female. Total body psoriasis of several years' duration. ALPHOSYL started 22/1/58. Lesions practically clear by 5/3/58.

dramatic clinical results in psoriasis

followed by medical successes
throughout the United Kingdom

Though modern medicaments have brought almost dramatic relief to many forms of skin affection, Psoriasis has so far remained intractable. Its aetiology continues to baffle investigation and many forms of tried therapy have yielded only partial or temporary results.

Now ALPHOSYL—after extensive clinical trials and medical successes throughout the United Kingdom—shows promise of bringing total clearances in many cases of Psoriasis.

In ALPHOSYL, for the first time, are presented in combination two agents: allantoin and a specially refined coal tar extract. The synergistic effects of these medicaments result in rapid clearance of the condition itself and positive stimulation of the healing process.

ALPHOSYL LOTION combines these two valuable agents in one preparation and has had impressive results where other medications have failed.

The successes obtained with ALPHOSYL indicate that it deserves a trial in all cases of Psoriasis—no matter how extensive the area of infection, how long the duration of the condition, or whatever the therapy previously used. Anabolex

the protein anabolizing, non-virilizing steroid promotes
—a return to appetite—an increase in weight—a sense of well-being

PATIENTS who are run down or who are recovering from illness frequently suffer from faulty protein metabolism. They are in negative nitrogen balance. Protein, in effect, is being broken down and lost faster than it is being built up.

Anabolex (androstanolone) restores the physiological balance. Many clinical trials have shown that, following the administration of Anabolex, there is an immediate return of the body's capacity to build up protein. The patient feels better, eats better and gains weight.

Here, then, is a physiological "tonic" with a wide therapeutic range. The weakness, lassitude, lack of energy and interest associated with many pathological states may be rapidly overcome by the administration of Anabolex.

Anabolex can be safely given to patients of all ages and both sexes; in therapeutic doses, its virilizing properties are almost negligible. The only known contra-indication is prostatic carcinoma.

INDICATIONS Middle-aged or elderly people who are debilitated or "run down." Preparation for and recovery from planned surgery. Convalescent patients. Premature infants. The child or adolescent who is under weight. Anorexia, Asthenia, Malnutrition, Wasting diseases.

Important news for users of Parenteral Iron

renewed interest in intravenous iron

Since Richmond (1957-1959) reported the induction of sarcomas in rats by iron dextran and these findings were confirmed by Haddow and Horning (1960) in mice, there has been a great deal of discussion and speculation as to how far this carcinogenic activity is applicable to man. Undoubtedly, out of this has arisen a renewed interest in intravenous iron, for when oral iron fails as a treatment for simple iron deficiency anaemias, parenteral iron becomes an almost irreplaceable therapy. Poor intestinal tolerance, malabsorption, and late pregnancy when time does not allow a trial of oral iron; all are indications for the parenteral route.

early work

Earlier workers investigated the intravenous route and Nissim (1947) established that saccharated iron oxide was effective intravenously, but it did have the disadvantages of lack of stability in the plasma, the risk of severe and painful reactions when injected outside a vein and a moderate incidence of toxic reactions. Useful as such a preparation was at that time it was not considered completely satisfactory. There was a need for a preparation which was free from general toxic reactions, stable in the plasma, did not cause severe reaction if accidentally injected outside a vein and was effectively utilised.

now

Astrafer I.V.* a preparation developed by Astra in their research laboratories is now available and does fulfil these requirements. It has been extensively tested and Anderson, Lucas and Hagedorn all report on its effectiveness and freedom from toxic reactions. This has been confirmed in this country in a report to be published.

Astrafer I.V. is a high molecular weight iron carbohydrate complex, containing 20 mgm of trivalent iron per ml. in an isotonic solution. It has a pH of 7.3 and it is stable in plasma. A completely new form of intravenous iron not to be confused with the earlier saccharated iron oxide and iron dextran preparations.

freedom from toxic reactions

Haemolysis is often regarded as a useful guide to the toxicity of iron complexes—Astrafer I.V. has negligible haemolytic activity and is extremely stable in the plasma. It clears rapidly from the circulation. Clearance is virtually complete within 24 hours following injection. This rapid rate of clearance is maintained throughout the course of treatment and repeated injections of Astrafer produce no accumulation of iron in the circulation; unlike earlier preparations where clearance is slow and serum iron values tend to increase as repeated doses are given. No cases of thrombophlebitis or pain along the course of the vein have been observed, and even when there has been accidental injection outside the vein local toxic reaction has been confined to a mild inflammation which rapidly disappeared and did not interfere with further injections. General reactions are very rare and mild in nature.

summary

Astrafer I.V.* is a new, stable and effective form of intravenous iron of low toxicity which gives almost 100% utilisation of the iron. Available in sterile ampoules of 5 ml. packed in boxes of five and twenty-five.

MENTAL HEALTH RESEARCH

A Completely New Antidepressant Agent

The Merck Sharp & Dohme Research Laboratories have discovered and developed an important, new, single chemical agent for the treatment of depression, *whether or not accompanied by anxiety*. This new agent is amitriptyline hydrochloride, which will be known as 'TRYPTIZOL'.

'TRYPTIZOL' is chemically different from all other antidepressant agents and has the outstanding clinical advantage of both antidepressant and anti-anxiety actions.

Other major advantages are:

- ▶ incidence of postural hypotension much less marked than with other agents.
- ▶ early and dramatic improvement in sleep patterns may be expected.
- ▶ neither parkinsonism, liver toxicity, nor blood dyscrasias reported during widespread clinical trials.

why **CRYSTAMYCIN**

TRADE MARK

Because its two antibiotic components frequently have a synergistic effect, providing an intensive bactericidal attack beyond the scope of either substance used alone. The penicillin in Crystamycin is in the soluble sodium form to exert a swift bactericidal effect. Streptomycin has been selected for its decisive effect on gram-negative organisms. And finally Crystamycin is surprisingly low in cost. Effectiveness plus economy — reasons why Crystamycin . . .

is so often chosen to put
a swift end to bacteria

GLAXO LABORATORIES LIMITED

For patients with marked involvement of trunk and abdominal muscles

Spencer

IS the support of choice

Spencer Supports are therapeutically effective as treatment aid in convalescent and chronic poliomyelitis, especially where there is involvement of trunk and abdominal muscles. The patient pictured at left is a typical example. This female child is shown 16 months following acute poliomyelitis. Note residual paralysis of abdominal muscles, scoliosis, and marked lordosis. Treatment for this patient included Spencer Spinal Support (as shown) to help maintain and correct body alignment and to help prevent further development of deformity. A Spencer abdominal Spring Pad* was incorporated in the support to aid respiration and to compensate for paralysed abdominal muscles.

Spencer is the support of choice because: each Spencer Support is *individually designed, cut, and made* according to the medical indications for each patient.

Neutrogena

NEW "HEAVY MOLECULE" SOAP FOR SENSITIVE PROBLEM SKINS

NEUTROGENA is a mild, transparent, non-alkaline, ethanolamine based soap. IT IS NOT A DETERGENT.

1. EXTREME WATER SOLUBILITY—less soap residue remaining to irritate the skin.
2. HEAVY MOLECULAR STRUCTURE prevents irritating penetration of the epidermal barrier.*
3. NON-ALKALINE cleansing action removes both acidic and alkaline impurities, leaving the skin aseptic and ready for subsequent treatment.

NEUTROGENA is mild, due to its non-drying or defatting action and unlike other soaps can be used frequently, even being well tolerated in cases of dermatitis, eczema, acne, etc.

A natural action laxative

When advising a laxative, medical preference usually favours the use of a product which acts in a perfectly natural way. Andrews meets this demand admirably. Its effect is to increase the fluid content in the bowel by osmosis and so induce a mild and natural aperient action that does not irritate the intestine.

Andrews will be found particularly useful for relieving constipation arising from decreased food intake, either during illness or restricted diet.

Andrews has further advantages, it is mildly antacid and relieves gastric discomfort. It also improves the flow of bile and helps to check biliousness and sick headaches.

The pleasant taste and refreshing effervescence of Andrews make it readily acceptable to most patients.

How do you tackle

FLAT FOOT?

WRONG METHOD 
 ANY SHOE with external wedge. Any external wedge to heel disturbs plane of forepart and heel.

RIGHT METHOD
 INNERAZE keeps sole and heel in perfect alignment.

...do you recommend an external wedge on the shoes?

But the wedges soon wear away; and very often the child is made to feel self-conscious because his shoes look different from other children's. As the diagram on the left clearly shows, any external wedge to heel disturbs the plane of forepart and heel. Surely it's more logical to have a wedge built-in between the inner and the outer sole—where it can correctly corset the foot, remain invisible, and completely unaffected by wear or repair of the shoe. That is how Start-rite INNERAZE shoes are made—on remedial lasts specially adapted to accommodate the internal wedge. That is why they are the only practical and thoroughly effective solution to this problem.

REFRESHER COURSE FOR GENERAL PRACTITIONERS

Third Collection with classified contents list to volumes 1, 2 and 3

Price 25s. (by post 26s. 9d.)

Each book contains a collection of sixty Refresher Course articles from the *British Medical Journal*. Each article, written by an acknowledged expert, has been revised by its author. The articles cover a wide range. Their object is to refresh the reader's memory of what is old and well-established and to tell him about new developments. They are invaluable to general practitioners and residents as practical reference books, to specialists as a means of keeping in touch with developments outside their own field, and to final-year students as up-to-date and reliable text-books.

The Third Collection has a cumulative classified contents list to the three volumes of "Refresher Course for General Practitioners."

HOW MANY JOURNALS SHOULD YOU READ?

Once a man has applied himself to the practice of medicine he is in duty bound to keep himself informed on every advance in medical knowledge—and how can he do this except by reading?

The literature pours from the printing presses of the world, some of it of lasting significance, some ill-founded or misguided. How can a busy man pick his way through this maze?

ABSTRACTS OF WORLD MEDICINE does it for you . . .

This journal covers the whole field of clinical medicine and allied medical sciences in each issue, and presents to you each month concise, informative, readable abstracts of the best of the original papers published throughout the world—selected from over 1,500 medical journals.

ABSTRACTS OF WORLD MEDICINE saves your time . . .

ST. ANDREW'S HOSPITAL FOR NERVOUS AND MENTAL DISORDERS, NORTHAMPTON

President: The Earl Spencer

Medical Superintendent: Thomas Tennent, M.D., F.R.C.P., D.P.H., D.P.M.

This registered hospital is situated in 130 acres of park and pleasure grounds. Patients, both male and female, who are suffering from incipient mental disorders, or who wish to prevent recurrent attacks of mental trouble, are received for treatment. Careful clinical, biochemical, bacteriological and pathological examinations. Private rooms with special nurses, male or female, in the hospital or in one of the numerous villas in the grounds of the various branches can be provided.

WANTAGE HOUSE

This is a Reception Hospital in detached grounds with a separate entrance to which patients can be admitted. It is equipped with all the apparatus for the complete investigation and treatment of mental and nervous disorders by the most modern methods; insulin treatment is available for suitable cases. It also contains laboratories for biochemical, bacteriological and pathological research. Psychotherapeutic treatment is employed when indicated.

MOULTON PARK

Two miles from the Main Hospital there are several villas situated in a park and farm of 600 acres. Milk, meat, fruit and vegetables are supplied to the hospital from the farm, gardens and orchards of Moulton Park. Occupational therapy is a feature of this branch, and patients are given every facility for occupying themselves in farming, gardening and fruit growing.

BRYN-Y-NEUADD HALL

The seaside home of St. Andrew's Hospital is beautifully situated in a park of 330 acres at Llanfairfechan, amidst the finest scenery in North Wales. On the north-west side of the estate a mile of sea-coast forms the boundary. Patients may visit this branch for a short seaside change or for longer periods. The hospital has its own private bathing house on the seashore. There is trout fishing in the park.

For terms and further particulars apply to the Medical Superintendent (Telephone No. 34354 Northampton), who can be seen in London by appointment.
