Four tablespoons of corn oil and the reduction of high serum cholesterol levels

A recent article in the medical press¹ published the results of a study in the use of corn oil with a low animal fat diet in the reduction of high serum cholesterol levels.

The article ended: *'It is concluded that corn oil, together with a diet low in animal fat, is feasible as a long-term measure for the lowering of serum cholesterol, being safe, acceptable to the great majority of patients, and having virtually no clinical contraindications.'*

The oil used in the study, corn oil, linoleic acid content 56%—was added to diets of 1,630 and 2,080 calories, and comprised 41·5% of the total fat in the former, 40·0% in the latter. The

quantity of oil added to each diet was 57 grams; just four tablespoons of corn oil a day.

Mazola Pure Corn Oil has a fatty-acid composition (56·2% linoleic) identical to that of the oil used in this experiment. In addition, Mazola is palatable; it is widely used as a cooking oil. Thus Mazola, available from grocers throughout the country, is probably the most accessible and appetising source of supplementary dietary oil.

total therapy in all iron-deficiency anaemias

Why total

Because Imferon not only raises the haemoglobin level—at the same time it supplies the iron essential for the myoglobin, tissue enzymes, and the mobilizable iron reserves in liver, spleen and bone marrow.

Why Imferon

Because it gives a rapid, predictable haematological response; there is negligible loss by excretion; side-effects are minimal; gastric intolerance is avoided; it assures administration of total iron requirements.

FURTHER INFORMATION
ON LASIX the new diuretic

3. EFFECT ON MAXIMAL THIAZIDE DIURESIS

"Maximal diuresis induced by hydrochlorothiazide is greatly enhanced by the administration of [Lasix.]"

Lancet, 1964, ii, 1089

Lasix the new diuretic

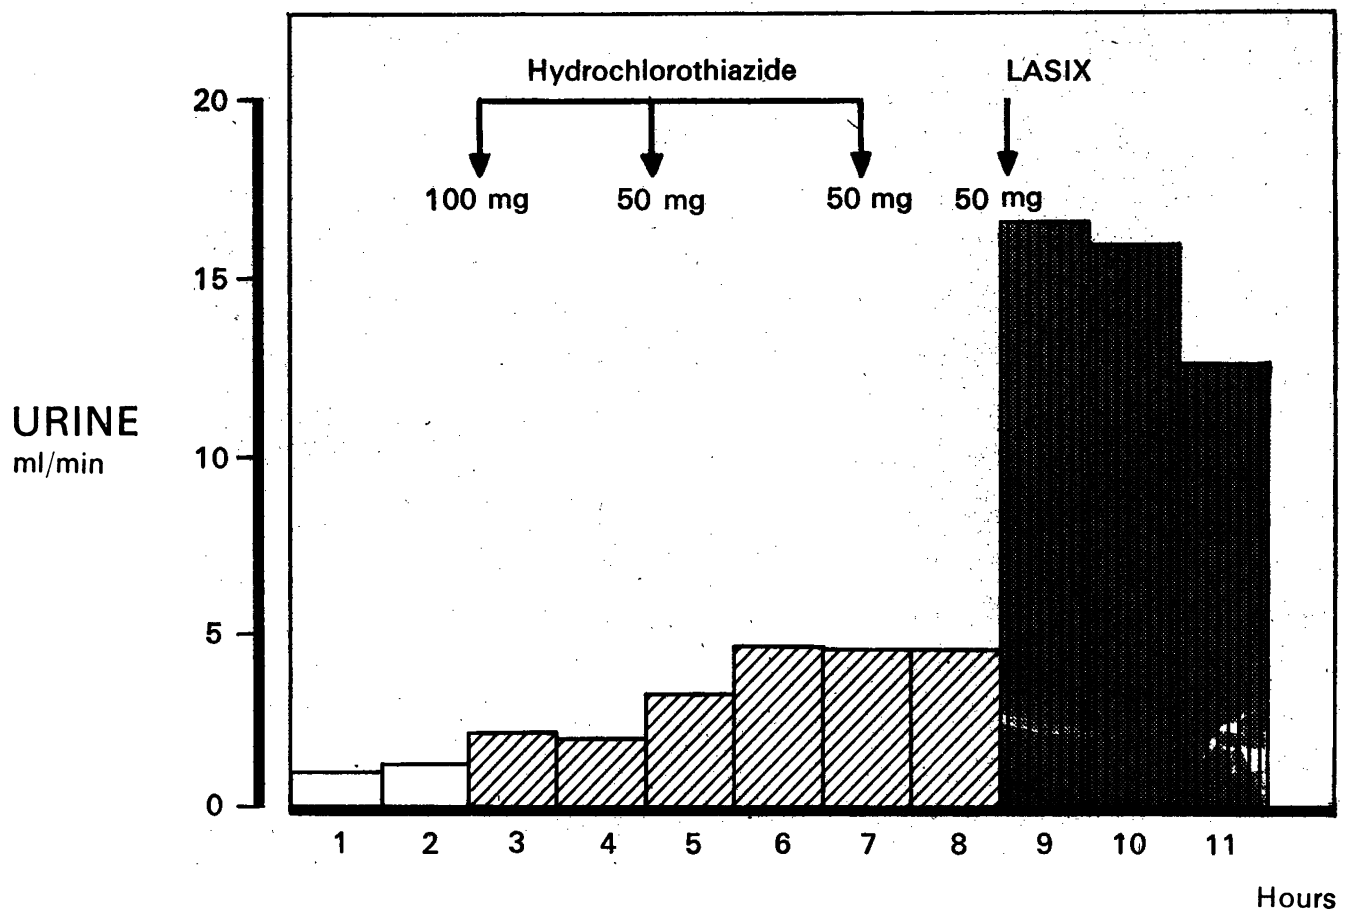

A product of Hoechst world-wide research

In this paper the authors showed that when Lasix is given to a patient who has reached the maximal diuresis with hydrochlorothiazide there is an immediate increase in diuresis. The experiment was designed to show whether there was any synergistic action between Lasix and hydrochlorothiazide. Their technique was to administer one drug until there was no further response, then to give a normal dose of the other drug. The diagram opposite shows urinary output in a patient with congestive heart failure when hydrochlorothiazide was administered first. On the other hand when hydrochlorothiazide was given after maximum diuresis had been achieved with Lasix there was no further increase in diuresis. The authors conclude "that [Lasix] and hydrochlorothiazide are not synergistic and that there is therefore no point in giving both drugs simultaneously."

LASIX less potassium loss
effective where thiazides fail
precise control of response

The diagram shows the effect of an intravenous injection of Lasix on maximal hydrochlorothiazide diuresis in a patient with congestive heart failure.

PRESENTATION:

Lasix is presented as tablets of 40 mg. frusemide in containers of 50 and 250; and in ampoules containing 20 mg. in 2 ml. in packages of 5 and 25.

a matter of judgement

The snooker player makes a series of judgements in planning each shot so as to place the balls in the best position to continue his break, or to snooker his opponent. In treating an infection the doctor makes a series of judgements against a more serious opponent, not least in his choice of an antibiotic.

After rejecting those of the antibiotics unlikely to be effective, and those which should be used only in special circumstances, Erythrocin (erythromycin, Abbott) will be chosen as the ideal antibiotic for initial therapy in a wide variety of common infections. The tetracyclines and chloramphenicol have narrower clinical indications than their broad bacterial spectra might suggest—unexcelled in certain infections, but often better replaced by less toxic agents. Erythrocin is probably the least toxic of all antibiotics, yet it has similar clinical effectiveness in the more common infections. Penicillin G and V are cheap and often effective, had not so many strains of staphylococci become resistant. Even

the synthetic penicillins have not entirely overcome the problem of allergic reactions. Erythrocin is perhaps the least allergenic antibiotic available.

Erythrocin is very active against the cocci and several of the more commonly pathogenic Gram-negative organisms, without upsetting the balance of the commensals. Though it has been in use for more than ten years, relatively few staphylococci have developed resistance. Whereas it was once an expensive antibiotic, with continued increasing use it is now an extremely economical one. Most important, the Erythrocin preparations are perhaps the safest forms of the safest of all antibiotics, for none has been shown to cause liver damage.

Alphosyl—today's most widely prescribed product used specifically for the treatment of Psoriasis

In case after case, Alphosyl's effectiveness in controlling psoriasis is repeatedly confirmed. Even in chronic and refractory cases outstanding results have been achieved despite the failure of all previous forms of therapy. Evidence of four recent clinical trials^{1,4,5,6} shows that from a total of 249 patients treated with Alphosyl, 111 were completely cleared, 80 were 75%–99% improved, 44 were 50%–74% improved and only 14 showed less than 50% improvement.

Why Alphosyl is so effective In Alphosyl, allantoin and a specially refined coal-tar extract were combined for the first time. Allantoin has been found to be particularly effective in loosening psoriatic scales,³ while the keratoplastic effect of coal-tar is well known.³ Alphosyl

is non-greasy and non-staining and vanishes on application. It is notably safe,^{1,3} being free from the risks which are found in other forms of treatment such as arsenicals, mercury, corticosteroids, x-ray, etc. It certainly deserves a trial in all cases of psoriasis.

New Alphosyl Cream Following the success of Alphosyl Lotion, this coal-tar allantoin combination is now available in Britain as a lubricating cream. The cream base has proved a particularly effective vehicle for Alphosyl as it incorporates a combination of free fatty acids (saturated and unsaturated) naturally occurring triglycerides, sterols and esters to give the lipid phase of the base a significant resemblance to the lipid array of normal human skin.⁶

Alphosyl Lotion formula—allantoin 2% + 90% alcoholic extract of coal-tar (5=1) 5% in a smooth, non-greasy lotion base.

Alphosyl Cream formula—allantoin 2% + 90% alcoholic extract of coal-tar (5=1) 5% in a vanishing cream base.

RESPIRATORY FUNCTION IN DISEASE

An Introduction to the Integrated Study of the Lung

By David V. Bates, M.D., M.R.C.P., *Director, Respiratory Division, Royal Victoria Hospital, Montreal*, and Ronald V. Christie, M.D., M.Sc., D.Sc., Sc.D., F.A.C.P., F.R.C.P., *Chairman, Faculty of Medicine, McGill University, Montreal*

A truly excellent application of recently developed knowledge of pulmonary physiology to the understanding and management of respiratory disease. The three opening chapters discuss methods of study of pulmonary function; the modern concept of evaluation of lung disease; and the various components of normal pulmonary function. The remainder of the book is devoted to individual disease entities, with discussions of clinical features, radiological features, and pathology—plus an exhaustive explanation of the pathophysiological effects of that particular disorder on overall pulmonary function. Altogether, 54 illustrative clinical case histories are presented, as well as some very useful commentaries on the effects of treatment on the pattern of disordered function.

Clinical Neurology

By Frank A. Elliott, M.D., F.R.C.P., *Professor of Clinical Neurology, University of Pennsylvania School of Medicine; Formerly Chief of Neurological Services, Charing Cross Hospital, University of London; Neurologist, Moorfields Eye Hospital; and British Army Specialist in Neurology*

A beautifully written text, for both student and resident, in which Dr. Elliott has departed from traditional approaches based arbitrarily upon the anatomical components of the nervous system, and has implemented a philosophy and organization that is a sounder and more certain aid to the clinical diagnosis of common neurological disease. The first part of the book is largely concerned with the diagnostic significance of neurological symptoms and signs, and the interpretation of clinical phenomena in terms of neuroanatomy and neurophysiology. The remainder of the book includes full discussion of the etiology, clinical features, diagnosis and presently available treatment of common neuro-pathies; rare syndromes are identified and described, but not discussed at length.

ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. This organism itself forms an antibiotic which may contribute to its rapid preponderance over other species.^{1, 2}

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight^{3, 4} and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.⁵

The go-ahead LIFE of a NAVAL MEDICAL OFFICER

A pilot being prepared for a simulated high altitude test.

This is a life of unbounded opportunity. Anywhere in the world, you practise medicine with complete medical freedom. Among 100,000 Naval men and women you gain extensive medical experience of the most varied nature. Civilian patients, too, of both sexes and all ages, are treated in Naval hospitals. You have excellent opportunities for specialising in the normal clinical subjects, and in the less usual, such as Nuclear, Underwater, and Aviation medicine. You are actively encouraged and financially assisted to acquire higher degrees. You can gain consultant status.

As a Medical Officer, your pay, allowances, and gratuity—or permanent commission pension—are very good: for example, your initial pay is considerably higher than that of a civilian hospital registrar.

You can enter in one of three ways: as a registered Medical Practitioner—your civilian experience back-dating seniority—or as a qualified doctor doing your pre-registration year, or as a student with a 2nd M.B. For qualified women doctors, there is a special short service commission. For fullest details of your Royal Navy life as a Medical Officer, write, mentioning your own qualifications and age to: **The Medical Director-General of the Navy, Medical Dept. (HN66/J), Empress State Building, London, S.W.6.**

Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

Med. Times, N.Y., 1958, 1, 74

Safe, Simple, Effective

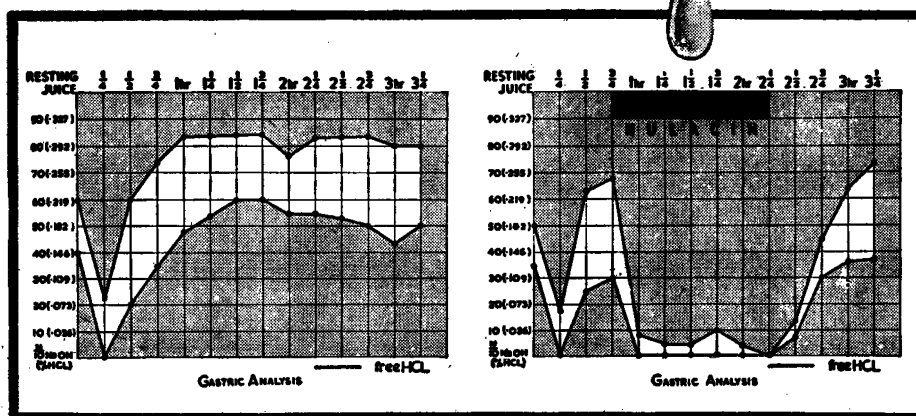

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryles tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable.¹ Nulacin tablets are prepared from whole milk combined with dextrans and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.⁸
