

# **Are you getting the full benefit of Penbritin's broad spectrum?**

In all probability you have prescribed Penbritin in at least one of the many indications for which it is recommended—Urinary Tract infections, Gastro-intestinal Tract infections and Upper and Lower Respiratory Tract infections. Perhaps you are one of the doctors who take full advantage of Penbritin's broad spectrum and use it in all these indications.

If you use Penbritin in Upper Respiratory Tract infections and Bronchitis, the following paragraphs may reflect your own reasons. If you do not, they should be of special interest to you.

**Activity.** Penbritin's activity across the spectrum covers all the common causative organisms (except penicillinase-producers) in Upper Respiratory Tract infections and the different forms of Bronchitis. This exceptionally wide coverage means that not only does Penbritin eradicate the primary pathogens, but it also eradicates any secondary bacterial invaders that could remain undetected in the early days of infection.

In General Practice it is usually too time-consuming and inconvenient (however desirable) to have bacteriological analyses conducted to determine which organisms are involved. Penbritin's wide

coverage affords both active and preventive therapy before secondary infections can occur.

**Action.** Because it is a penicillin, Penbritin is bactericidal in action—killing the offending organisms instead of merely inhibiting their growth. This is of special advantage in treating children, the old and those patients whose natural defences have been lowered, because Penbritin's effectiveness does not depend upon the natural defences of the body.

**Safety.** Like all penicillins, Penbritin is free from permanent or dangerous side effects.\* This aspect cannot be over-emphasised when treating children. Published clinical trials have already shown that with some other broad spectrum antibiotics there can be adverse effects—and a fair number of the patients treated for Upper Respiratory Tract infections and Bronchitis are children.

Penbritin's broad-spectrum activity, bactericidal action and comparative lack of toxicity place it firmly as **the therapy** in these infections, and nearly 100 world clinical references endorse this claim.

**Dosage:**

Children: Under 2 years: 62.5-125 mg. four times daily, before meals.

2-10 years: 125-250 mg. four times daily, before meals.

Adults: 250 mg. four times daily, before meals.

In severe infections these doses may be increased or Penbritin may be given by injection.

\*Contra indication: Penicillin allergy. Side-effects: As with other penicillins.

# Early treatment of colds with 'Rovamycin'

A report\* on controlled trials in the early antibiotic treatment of colds was published on 5th January.

The author of this report summarizes his findings as follows:

**"1. The common cold can in most cases be aborted and rendered non-purulent if it is treated systemically, within 6-12 hours or so of the appearance of nose or throat symptoms, with an appropriate antibiotic for  $2\frac{1}{2}$  to  $3\frac{1}{2}$  days.**

**2. An antibiotic which has given very good results is spiramycin adipate ('Rovamycin'). Experimentally, this is persistent in the tissues for 24 hours after a single dose; dosage can be spaced at 8-hourly and later 12-hourly intervals, and in most cases, with experience, may not exceed a total of 1.75 grammes.**

**3. The method must be selective, but the possible indications are wide."**

Since antibiotics are widely used in the treatment of certain common bacterial infections of the respiratory system and nasopharynx, the early treatment of colds with 'Rovamycin' as described above could be valuable in special risk patients such as:

Those with chronic chest conditions, including asthmatics, chronic bronchitics, patients with bronchiectasis and those in whom a cold usually "goes to the chest."

Patients prone to sinus and middle ear infections, particularly children.

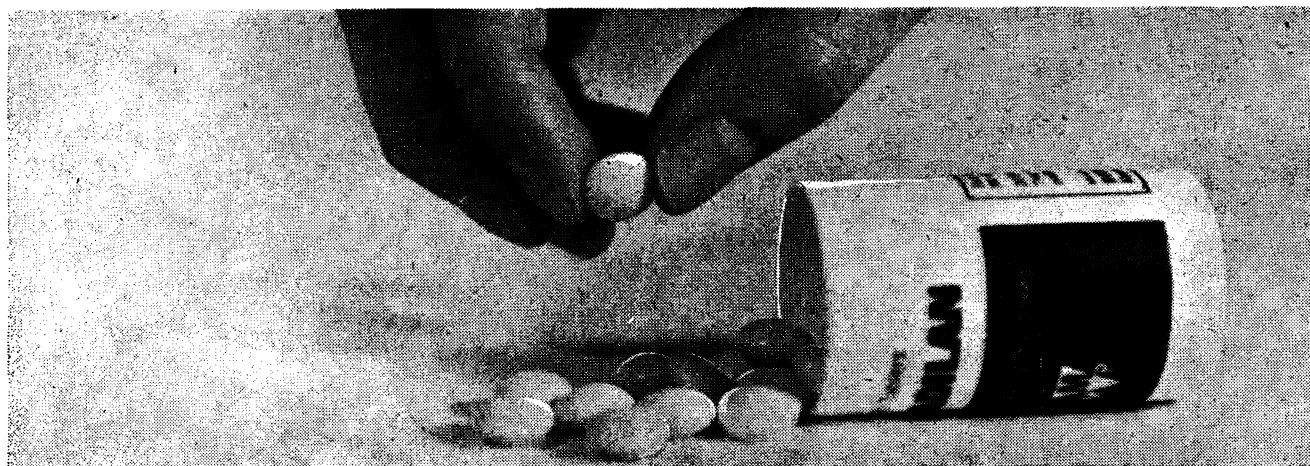

Patients whose natural defences against infection are impaired, e.g. those receiving corticosteroids or radiation therapy and those suffering from neoplastic diseases of the blood or lymphatic tissues.

## OPTIMUM VASODILATATION

'BRADILAN' is tetranicotinoylfructose, a new research development which provides effective, sustained vasodilatation by a direct action on the smooth muscle of peripheral arterial vessels.

## SUSTAINED ACTIVITY

In the alkaline region of the alimentary tract, 'BRADILAN' (coated tablets of 250 mg. tetranicotinoylfructose) is gradually and evenly hydrolysed to nicotinic acid which is absorbed to provide a continuous adequate level of activity over several hours.

## IMPROVED TOLERANCE

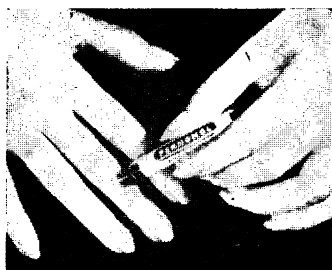

Despite the high activity level provided, eight published clinical trials on 'BRADILAN' stress the freedom, from nicotinic acid side effects (facial flushing, itching, headache, nausea), even at high dosage.

**Little if any soporific effect**

**Well tolerated by patients  
of all ages**

**One tablet three times daily  
effective in  
the majority of adult patients**

'Banistyl' is well tolerated at a wide range of dosage levels. In general, side-effects are mild and occur in a low percentage of patients only. Somnolence is infrequent; when it occurs, it is usually not marked and disappears after the first few days of treatment or can be controlled by adjustment of dosage. Other side-effects which have been reported include nausea, epigastric pain, vertigo, diarrhoea and mild headache.

Although there is no evidence to suggest that 'Banistyl' is embryopathic, it is a sound medical principle to avoid, wherever possible, prescribing any drug during the first three months of pregnancy.

Certain activities, including control of vehicles or machinery, should not be undertaken by a patient starting a course of 'Banistyl' until it is evident that the drug has no soporific or other central nervous system side-effects, or until any such effects have subsided.

'Banistyl' is supplied as tablets containing dimethothiazine 20 mg.

# If you think PAYNOCIL is just a strong, quick acting aspirin and nothing else

## try it and see

**Paynocil disperses instantly on the tongue in a release of sweetened lemon flavour, distributing aspirin into the stomach in minutely fine particles—and no water is needed.**

Paynocil is aspirin in a most carefully planned form. At 10 grains per tablet in a glycine base it has twice the strength of aspirin tablets B.P. and it is also absorbed twice as fast. It is better tolerated than plain aspirin. Patients with rheumatic disorders who experienced nausea, heartburn or epigastric pain after plain aspirin have found Paynocil acceptable.

So Paynocil is especially valuable in rheumatic

disorders, for it provides the threefold activity of aspirin—analgesic, anti-pyretic, anti-rheumatic—in a form which is exceptionally pleasant and easy to take.

Long term in rheumatic disorders, short term in aspirin's many other indications (colds, influenza, headache, dysmenorrhoea etc.), Paynocil is an ideal therapy. It is convenient to take and it acts fast—patients who need aspirin will prefer Paynocil. It comes in convenient foil strips to slip easily into pocket or bag and is also available as Junior Paynocil—2½ grains per tablet—for children.

# Cedilanid

## three benefits in the management of heart failure

### speed

On entering the bloodstream, Cedilanid is only weakly bound to the serum albumin, and is readily dissociated. This gives rapid onset of action.

### safety

Because Cedilanid is so quickly eliminated from the body, the duration of action is relatively short, and the toxic effects of overdosage are short-lived.

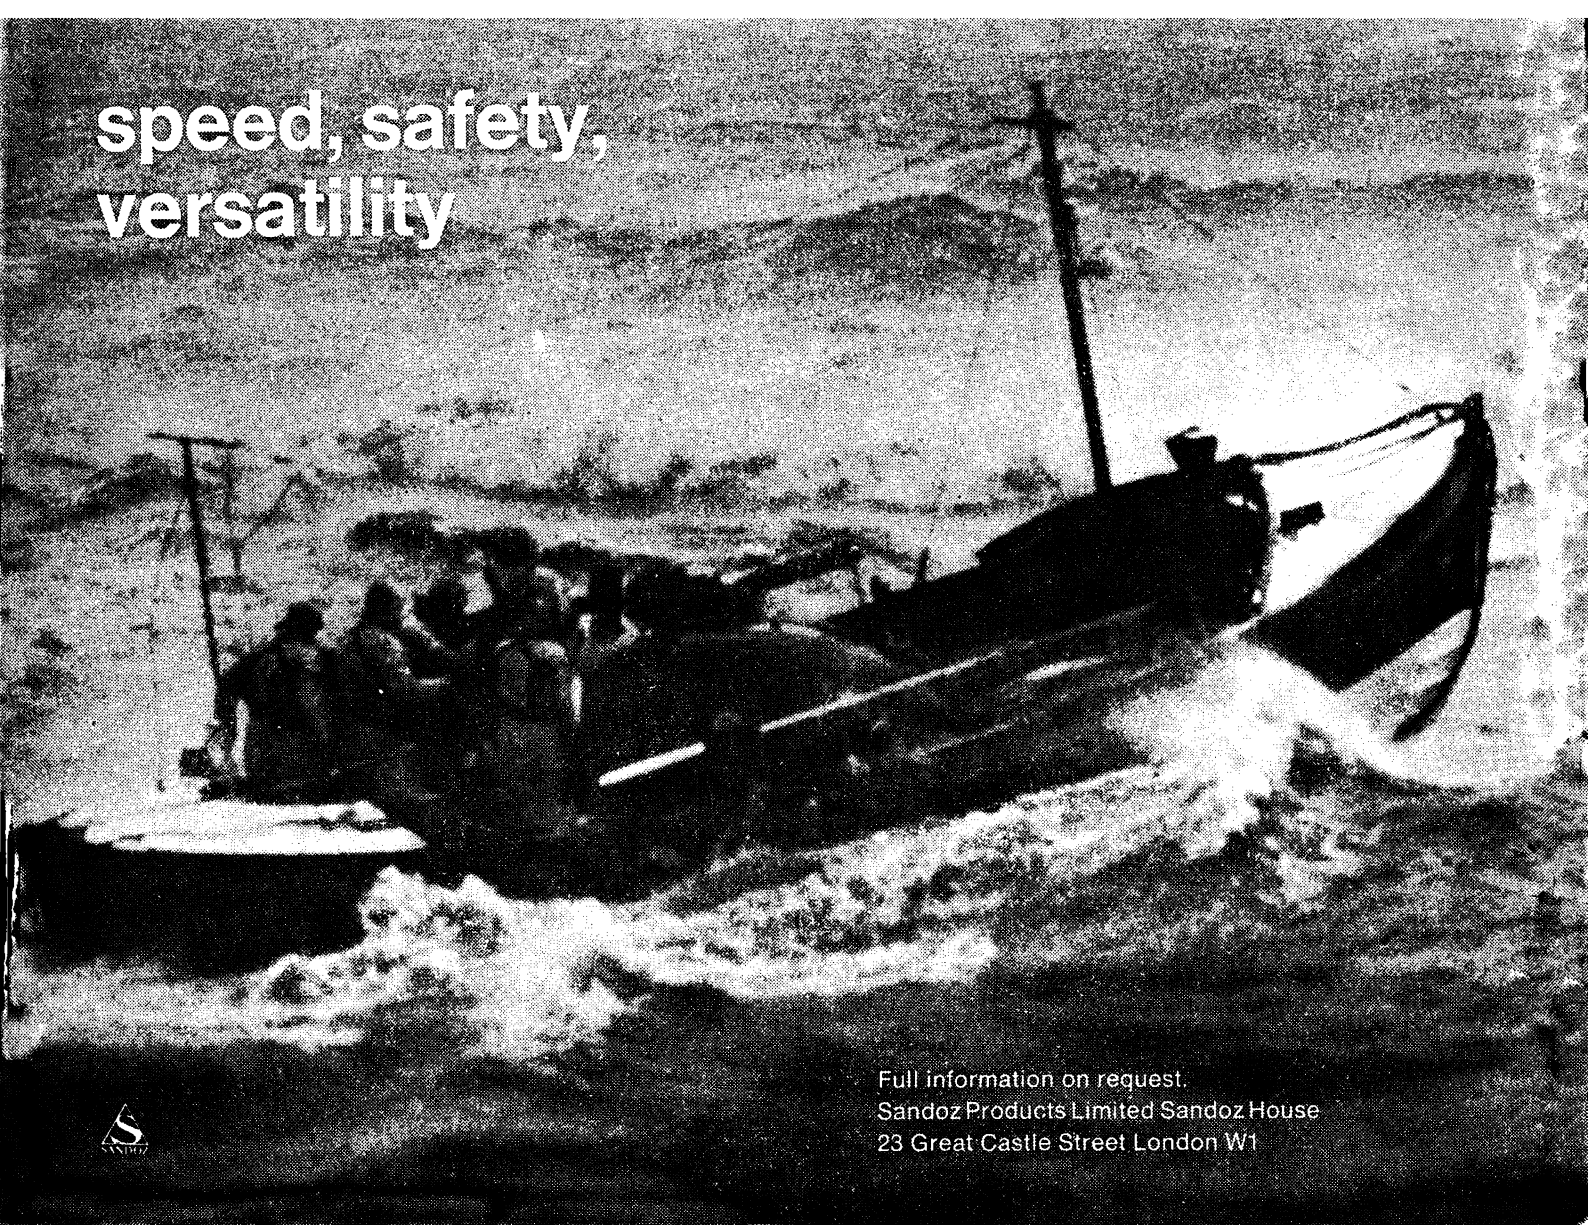

### versatility

Cedilanid is an all-purpose cardiac glycoside, as valuable for rapid control of acute heart failure as for routine digitalisation and maintenance of the patient in congestive heart failure.

**Cedilanid: particularly for patients who cannot tolerate digoxin or other digitalis preparations**

## MEGACLOR SYRUP

(clomocycline)

*Of all the tetracycline syrups available today Megaclor is the most soluble, ensuring rapid and effective absorption with resultant high blood and tissue levels.*

Having a combination of high anti-bacterial activity (particularly against staphylococci, streptococci, pneumococci and haemophilus) with minimal risk of undesirable side reactions makes Megaclor the ideal broad-spectrum antibiotic for children, especially for infections of the chest, nose and throat.

**PHARMAX LIMITED** Thames Road Crayford Kent

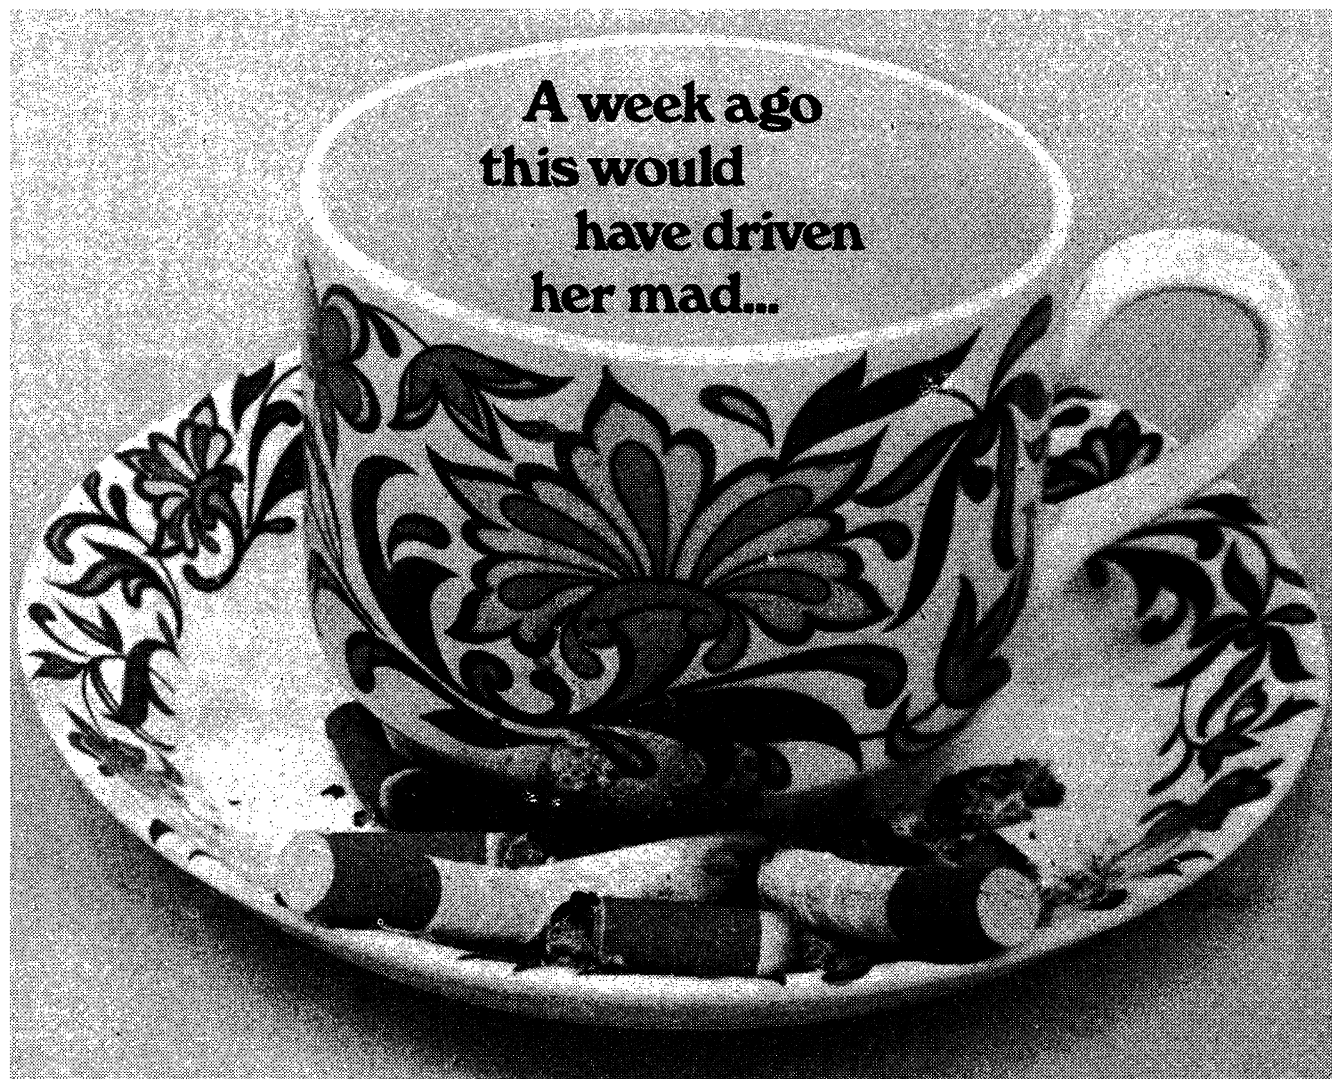

**Megaclor Syrup** contains 85 mg. clomocycline in each 5 ml. teaspoonful (60 ml. bottles: 5/-d basic N.H.S. Price).

**Megaclor Capsules** for adults each contain 170 mg. clomocycline.

# A statement

## about hypertension and 'Esbatal' (Bethanidine)

---

An authoritative British clinical team found that control of blood pressure was achieved with 'Esbatal' in 73 to 87 per cent of the hypertensive patients they treated. Toxicity was not seen. Side-effects were rare. Tolerance was not a problem. Postural side-effects could usually be overcome by adjusting the dosage, timing of administration or by use of a diuretic.

The team with its wide experience in treating hypertension concluded that 'Esbatal' compares favourably with other established drugs. It comments that 'Esbatal' "has advantages which outweigh relative disadvantages in comparison with guanethidine or methyldopa". The incidence of side-effects, toxic effects and feelings of malaise were less with 'Esbatal' than with these two drugs.

To quote again from the report: "There would now seem to be no case for beginning treatment with guanethidine or methyldopa in any new patient, but either may be useful in any patient in whom treatment with one of the newer preparations is unsatisfactory."

For a full account of the trial which covered 82 patients and extended over  $2\frac{1}{2}$  years see the *British Medical Journal* 2nd December, 1967, pp. 519-521. Full information about 'Esbatal' brand Bethanidine Sulphate is available on request.

## ST. ANDREW'S HOSPITAL NORTHAMPTON

President: Lieutenant-Colonel J. Chandos-Pole, O.B.E.  
Medical Director: James Harper, M.B., F.R.C.P. (Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illness. The fees range from twenty guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 13 acres of pleasant grounds which provide all recreational facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A recreation and occupation centre, known as Gloucester House, has been opened recently, which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

### WANTAGE HOUSE

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available.

Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

For terms and further particulars apply to the Medical Director (Telephone No. 34354 Northampton), who can be seen in London by appointment.

*in angina pectoris*

# SYNADRIN® 60 WORKS

In controlled trials,  
prenylamine—SYNADRIN 60—significantly reduced  
the number of angina attacks<sup>1,2,3.</sup>

Double-blind clinical trials of SYNADRIN 60, reported from many countries and confirmed by recent British studies, demonstrate that SYNADRIN 60 is effective in angina pectoris. SYNADRIN 60 reduced the number of anginal attacks and nitroglycerin consumption to a significantly greater extent than the placebo. Reduction in excessive sympathetic stimulation lowers the oxygen demand of the heart, a mild sedative action allays anxiety and increased blood flow improves oxygen supply.

**Dosage:** An adequate dose is essential to ensure a rapid onset of action and therapy can be initiated with one tablet (60 mg) SYNADRIN 60 three times daily. Reduction of the frequency of anginal attacks should be observed within two weeks.

**Side Effects:** SYNADRIN 60 is well tolerated, even after prolonged treatment. Gastric intolerance has been reported in few cases. Skin rashes have occurred on rare occasions. Transient drowsiness has been noticed at the commencement of treatment. SYNADRIN 60 has a slight hypotensive action and the dose of concurrently administered hypotensive agents may require adjustment.

**Contraindications:** SYNADRIN 60 is contraindicated in severe disorders of cardiac conduction, heart failure and hepatic conditions.

SYNADRIN 60 is available as tablets containing 60 mg prenylamine.

# when chronic illness brings depression 'Tryptizol' lifts the mood

Protracted illness, whether self-limiting or terminal, is frequently accompanied by anxiety and depression. Patients so affected usually benefit from treatment aimed at allaying their mental symptoms. In cases of depression with or without associated anxiety, 'Tryptizol' has proved particularly valuable. The patient is generally calmer, mood is lifted, and sleep and appetite are improved.
