PENBRITIN

He's better; his throat's stopped hurting; his eyes don't water any more; he's out of bed. It didn't last too long and his mother is relieved to get him back to school so soon. The record card shows a straightforward recovery from an Upper Respiratory Tract Infection. And it shows something far more important...

Penbritin is the answer – *first time*

Bacterial infection of the upper respiratory tract may be caused by a variety of organisms. Penbritin with its wide spectrum of activity can kill all the common pathogens responsible for Upper Respiratory Tract Infection. By prescribing Penbritin you can stop the spread of infection and prevent complications.

Penbritin has a high degree of safety and can be prescribed with confidence for patients of any age. The syrup formulation of Penbritin is well accepted, especially by children and it is highly probable that they will take the full prescribed course. The prescribing of five-day courses or longer, has been simplified by the introduction of 100 ml. bottles of Syrup and Syrup Forte.

In the treatment of Upper Respiratory Tract Infections, Penbritin is the answer—first time. And so often the only prescription needed.

Dosage:

Children under 2 years: 62.5 - 125 mg.
2 - 10 years: 125 - 250 mg.
Adults: 250 mg.

All dosages q.d.s. a.c. In severe infections these doses may be increased or Penbritin given by injection.

Contra-indication: Penicillin allergy.

Side-effects: As with other penicillins.

Availability: Penbritin (ampicillin B.P.)

Syrup, 125 mg./5 ml.

Syrup Forte, 250 mg./5 ml.

Paediatric Tablets, 125 mg.

Capsules, 250 and 500 mg.

Injections, 100 mg., 250 mg., 500 mg.

now, for the first time a clinically proved *appetite stimulant*

'Periactin' induces a marked improvement in the appetite of many patients. The resulting weight gain is due only to the increased food intake—there is no disturbance of endocrine function, no evidence of fluid retention.

'Periactin' does not reproduce the effects of 'tonics', haematinics or vitamins. 'Periactin' acts promptly, and its dosage is simple.

'Periactin' will be invaluable for many of those situations in which patients, adults and children, require food and yet have no appetite for it.

Many patients with painful conditions still have to continue at work. For such patients, 'Para-Hypon' is a most appropriate analgesic treatment, and provides a high level of pain relief without causing drowsiness or making the patient dispirited.

Paracetamol and codeine give double analgesic effect and the mild stimulant caffeine ensures that the patient keeps bright and alert; no stopping work because of pain, no slacking off because of the depressant effect of codeine.

The over-anxious patient needs your understanding... and the calming effect of **BENVIL**

Your reassurance, understanding and encouragement play an absolutely vital part in the treatment of any patient you feel is emotionally distraught. To help you *keep* your patients relaxed, calm and attuned to the realities of life you may wish to prescribe Benvil.

In cases of acute anxiety and tension, Benvil relaxes, calms, and restores a feeling of well-being. And it does this without over-sedation, which means that patients can successfully go about their daily work – an important aid to readjustment.

Moreover, reports on Benvil suggest that it is free from dependence.

Benvil is available as a new, smaller blue capsule containing 250 mg. tybamate in an original pack of 50.

Dosage: One capsule 3 or 4 times a day. For elderly patients it is recommended that therapy be started on the lower dosage. The dosage can be increased if necessary to a maximum of eight capsules in 24 hours to suit the individual concerned.

Precautions: Side effects are mild and infrequent at the normal dosage. In the aged, hypotensive effects are possible at higher doses. If drowsiness or mild dizziness occur, the patient should avoid activities requiring optimal alertness. If symptoms of hypersensitivity occur, treatment should be stopped and appropriate symptomatic therapy given.

Consumption of alcohol or concurrent administration of other psychotropic agents (e.g. phenothiazines, monoamine oxidase inhibitors) may have an additive effect. The customary precautions should be taken in administering Benvil to patients with a history of drug

allergies, blood dyscrasias, hepatic or renal disease. There has been no evidence to suggest development of tolerance or dependence with Benvil: in common with other psychotropic agents however, it is advisable to give Benvil cautiously to addiction-prone subjects and to withdraw therapy slowly after prolonged use. Although animal tests suggest freedom from teratogenic effects, Benvil cannot at present be recommended during the early weeks of pregnancy.

Pharmitalia, new to Great Britain, introduces itself

Doctors rightly insist on knowing something of the activities and outlook of the manufacturers whose products they may decide to put at the service of their patients. As Pharmitalia is a comparative newcomer to Great Britain it may be helpful to offer the following information about itself.

The Company registered in Italy as Società Farmaceutici Italia Anonima per Azioni (Gruppo Montecatini Edison) is generally referred to in Italy as 'Farmitalia'. Its several associated companies in other countries also bear this description 'Farmitalia', usually as part of their registered name. In the United Kingdom, the Farmitalia associate is registered as 'Pharmitalia (U.K.) Ltd', the spelling having been modified to conform to English usage.

Farmitalia of Italy is part of the Montecatini Edison Group, one of the world's largest chemical manufacturers. Among the interests of the Group are dyestuffs, the mining and extraction of ores and the manufacture of a wide range of chemicals. An outstanding characteristic of Farmitalia is its active

pursuit of fundamental research and its application in pharmacology and related subjects. This research is carried out in its own institutes and laboratories, and in association with independent workers in universities and elsewhere.

Pharmitalia intends to make available to British physicians all those products of Farmitalia research which show evidence of being useful in medicine as practised in this country. Pharmitalia is aware of its responsibilities in this direction: to maintain innovation and quality, an efficient distribution, and to provide that service of technical information without which it is imprudent to prescribe potent pharmaceutical substances. In providing this service several forms of communication will be brought into use, if and when we consider them legitimate, and acceptable to physicians. But we have no intention of using methods which, effective in much of normal commerce, are inappropriate between a science based industrial organisation and the profession it serves.

Bactrim Roche produces its highly potent bactericidal activity from the potentiating action of its two components-trimethoprim and sulphamethoxazole. A leading article in the British Medical Journal on 18 May 1968 drew attention to the important therapeutic potential of this bactericidal synergy.

Ventolin INHALER

(Salbutamol)

Trade Mark

A different class of bronchodilator

MORE SELECTIVE · LONGER ACTING · MORE EFFECTIVE

A NEW STANDARD IN BRONCHODILATOR THERAPY

Previously available β -adrenergic stimulants such as isoprenaline and orciprenaline act on the β_1 receptors of heart muscle as well as on the β_2 receptors of bronchial muscle. Consequently, undesirable increases in heart rate and pulse pressure sometimes occur when these drugs are used to produce bronchodilatation.

Ventolin is different: first because it is highly selective in its action, affecting primarily β_2 receptors: second, because it is more effective than existing bronchodilators: and third, because it is longer acting.

MORE EFFECTIVE

Clinical trials have shown that Ventolin Inhaler is a more effective bronchodilator than isoprenaline or orciprenaline when given by inhalation; a comparison of the effects of inhaled Ventolin, isoprenaline, and orciprenaline on Forced Expiratory Volume in one second (FEV_1) in severely asthmatic patients is shown in Fig. 1.

LONGER ACTING

Ventolin is unusually long acting, its effect persisting for at least four hours. By contrast, isoprenaline, even in large doses, has a characteristically intense but transient effect. In another study using whole-body plethysmography, inhalation of 100 μ g of Ventolin produced an

almost immediate maximal increase in airway conductance which was sustained for four to six hours.

MORE SELECTIVE

No side effects have been reported with therapeutic doses of Ventolin Inhaler. In studies comparing Ventolin with isoprenaline, a major difference found was that Ventolin did not stimulate the heart or affect the blood pressure, even after inhalation of a relatively large dose. (See Fig. 2.)

MORE ACCEPTABLE TO PATIENTS

Patients expressed a marked preference for Ventolin Inhaler in double-blind studies comparing Ventolin with aerosols containing isoprenaline or orciprenaline.

SAFETY IN USE

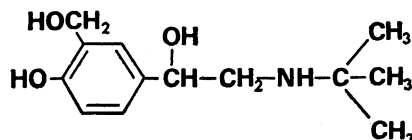

Past experience suggests that misuse of aerosol bronchodilators by asthmatic patients may lead to dangerous effects on the heart or give a false sense of security to patients with incipient status asthmaticus. Ventolin Inhaler has no effect on the heart in therapeutic dosage and has a long duration of action. Both these properties provide additional margins of safety; the lack of cardiac effects should reduce any likelihood of deaths due to ventricular fibrillation and the long duration of action makes it possible for patients to realise in time if the drug is becoming less effective. Because an effective treatment with Ventolin Inhaler should last for at least four hours, patients have been advised to consult their doctor immediately if the effect lasts for less than three hours, so enabling the doctor to take timely action.

CLINICAL STUDIES

The onset of action of Ventolin by inhalation is rapid; near maximal bronchodilation occurs within five minutes. The duration of action of Ventolin is much greater than that of isoprenaline. The results of a comparative study in severe asthmatics are summarised in Fig. 1. The effect of 1,000 µg of isoprenaline by inhalation on Forced Expiratory Volume in one second (FEV₁) reached its peak at six minutes and thereafter diminished rapidly; The peak effect on Forced Vital Capacity (FVC) was reached a little later, but the pattern was otherwise similar. A significant increase in heart rate was noted soon after administration of isoprenaline. After 200 µg of Ventolin, however, near maximal response persisted for two to three hours and substantial improvement was still present after five hours. No side effects were observed after Ventolin.

CHEMISTRY

Ventolin is 2-t-butylamino-1-(4-hydroxy-3-hydroxymethyl)-phenylethanol. Its approved name is salbutamol.

The Inhaler contains Ventolin base, suspended in microcrystalline form.

PHARMACOLOGY

Ventolin was discovered in the research laboratories of Allen & Hanburys Limited during a search for a β-adrenergic stimulant free from undesirable cardiovascular actions. Replacement of the 3-OH group in isoprenaline by the primary alcohol group, -CH₂OH, gave rise to a new series of potent β-adrenergic stimulants. Ventolin was chosen for development because of its highly selective action on bronchial muscle, its lack of effect on heart muscle and its long duration of action.

ANIMAL STUDIES

In all the species used, Ventolin was a more potent bronchodilator than isoprenaline when administered by aerosol or by mouth and about equally active by intravenous injection. It differs from isoprenaline in being able to prevent bronchospasm without having obvious effects on the cardiovascular system. Ventolin is unusually long acting because it is not affected by catechol o-methyl transferase, an enzyme which rapidly inactivates isoprenaline in the body.

HUMAN STUDIES

Studies on asthmatic volunteers using a whole-body plethysmograph revealed that doses of 100 µg of Ventolin by inhalation produced a substantial and almost immediate increase in airway conductance which was sustained for several hours. In normal volunteers, doses of 400 µg by inhalation had no effect on heart-rate, ECG or blood pressure. 200 µg of isoprenaline had marked cardiovascular effects in the same subjects.

INDICATIONS

Ventolin Inhaler is indicated for the relief of bronchospasm in:

- Bronchial asthma of all types ☐
Chronic bronchitis ☐ Emphysema ☐

DOSAGE

One or two inhalations, repeated four-hourly if required. The bronchodilator effect of each administration of Ventolin Inhaler lasts for at least four hours and more frequent use should be unnecessary. This long duration of action provides a margin of safety. The patient can readily recognise any reduction in the length of action and should be instructed to consult a doctor if the effect of a previously adequate dose lasts for less than three hours.

The patient's instruction leaflet enclosed with each Ventolin Inhaler therefore contains the following paragraph:

'Dosage; use Ventolin Inhaler only as directed by your doctor. He will tell you how many puffs to take for a treatment. An effective treatment with Ventolin Inhaler lasts for about four hours. Consult your doctor immediately if the effect lasts for less than three hours. No more than eight treatments should be taken in any 24-hour period without consulting your doctor.'

SIDE EFFECTS

No side effects have been reported from Ventolin given by inhalation in therapeutic doses.

Doses greatly in excess of those needed for full bronchodilation could cause short-lived secondary effects such as peripheral vasodilatation, minor increase in pulse rate, and skeletal muscle tremor.

CONTRA-INDICATIONS

There are at present no known contra-indications to the use of Ventolin. However, care should be taken with patients suffering from hypertension, myocardial insufficiency or thyrotoxicosis. Notice should be taken of recent suggestions that the administration of any drug during the first trimester of pregnancy is undesirable.

PRESENTATION

Ventolin Inhaler is a metered aerosol, delivering 100 µg of Ventolin per inhalation, with a specially designed actuator. Each canister provides 200 inhalations.

An announcement from Delandale Laboratories

The first controlled release preparation of lithium carbonate in the world

Patients in the depressive phase of disorders of affect are notoriously difficult to treat and are often resistant to antidepressant drugs.¹ In these cases, and in patients with frequently recurring attacks of depression or mania, published reports indicate that lithium is often of benefit as a prophylactic. It is particularly important, however, that treatment with lithium salts should be supervised by a specialist with facilities for laboratory control until wider experience has been gained of its use in

long-term prophylaxis. PRIADEL represents the latest development in mood control by lithium salts. It is the first controlled release preparation of lithium carbonate in the world, and the first product specifically formulated for long-term mood control using a single daily dosage regime. It is now available for use under specialist supervision. Physicians in general practice who wish to follow the literature on lithium therapy, and the characteristics of the new product PRIADEL, are invited to write for full details.

'When did you last see Bournemouth?'

Was it that week-end just before the war when you hired a Lea-Francis with whitewall tyres and drank the very latest astonishing cocktails and danced into the early hours? You can still drink astonishing cocktails at The Bournemouth Carlton, though they aren't so often asked for now and you will find the service and amenities just as impeccable as they always were. You deserve a few days away, come to The Bournemouth Carlton — you'll remember them well!

Protracted illness, whether self-limiting or terminal, is frequently accompanied by anxiety and depression. Many patients so affected benefit from treatment aimed at allaying the symptoms of their anxiety-depressive state.

'Tryptizol', a well-established antidepressant with additional tranquillising properties, has proved of considerable value in relieving the distressing symptoms of the anxiety-depressive condition. The patient becomes calmer and mood is lifted. Sleep and appetite improve, and preoccupation with the illness gives way to more normal interests.

A Fruitful and Important Medical Career

Have you as a doctor seriously considered what an interesting and worthwhile career can be had in the scientifically and medically stimulating atmosphere of a medical team in the pharmaceutical industry?

This is an opportunity to join such a team working with pharmacologically active and medically interesting new compounds in different fields of medicine.

By being positively involved in the pre-clinical aspects and personally co-ordinating the early and subsequent clinical studies the doctor gets the opportunity of intellectual satisfaction and is deeply involved in the new and exciting subject of clinical therapeutics.

Our research compounds are developed by the extensive research laboratories of the parent company and all have potential use in human therapy.

A doctor in the medical team can expect an attractive salary, together with a very generous non-contributory pension scheme and life assurance. A car is provided.

If you would like to make a career in the pharmaceutical industry, please write in confidence to:

Julian H. Shelley, Medical Director,
Boehringer Ingelheim Limited, Isleworth House,
Great West Road, Isleworth, Middlesex.

The rising cost of depression

The cost is considerable — in human suffering, in time spent in medical care, and in the number of drugs involved in treatment. 'Surmontil' cuts costs because it is a single compound with both antidepressive and psychosedative activity. 'Surmontil' reduces the need to prescribe concurrently two or three types of drug — an antidepressive, an anxiolytic and a hypnotic.

... at Lochdhu we know why
doctors prescribe themselves a
fishing holiday ...

It is no coincidence that over half our
clientele, including guests from abroad,
are members of the medical profession—
they know what is good for them.

Amid the peace and soli-
tude of the Caithness
moors, under the wide nor-
thern sky, the tensions of
modern living relax their
grip and worries fade into
their true perspective.

Lochdhu offers the finest
trout fishing, too. Seven
of our dozen trout lochs
average over $\frac{3}{4}$ lb. and four
of these average over 1 lb.
Last year Skyline gave one
angler 20 trout, weight 22
lb.—good fishing by any
standard.

Lochdhu is geared to the
needs of anglers. If the
trout are taking, stay on the
loch and we'll keep dinner
hot for you. If you come
in wet, down a stiff malt
whisky and give us your
gear to put in the drying
room while you luxuriate in
a steaming bath of soft
peaty water.

Above all, relax and en-
joy the warm welcome, good
company, fine food and cel-
lar that Lochdhu offers.

A morning's surgery brings a lot of Crystapen G patients

How many patients needing antibiotics do you see in a morning? Whatever the number, there is a strong case for using penicillin. It is still the drug of choice in so many infections. An established penicillin in a modern form is Crystapen G (penicillin G)—one you can rely on in the treatment of strep. throats for example.¹ And Crystapen G is as effective clinically as penicillin V.²

When your patients need oral penicillin, you can rely on Crystapen G.

SAFE SIMPLE EFFECTIVE NULACIN

EFFECTIVE, because Nulacin achieves *continuous* neutralisation of hyperacidity. As peptic ulcers arise and recur only in the presence of free acid, Nulacin not only relieves symptoms but is the ideal long-term medical treatment.

SIMPLE, because Nulacin is specially designed to dissolve slowly in the mouth and produce a continuous intragastric milk-alkali drip in the ambulant patient. One tablet provides up to 30 minutes' relief from excess acid.

SAFE, because clinical experience has shown that Nulacin produces no electrolyte disturbances and can be used in *all* patients with peptic ulcers.

NULACIN is a unique combination of whole milk protein and fats with dextrins, maltose and suitable antacids and provides *economical*, long-term medical treatment for peptic ulcer.
