Treatment

BRONCHITIS

PENBRITIN

He didn't expect to be back at work so soon. Ten days ago he went down with Bronchitis—his first time off work in years. He's lucky—his was an isolated attack and he can now expect a trouble-free winter. For the Chronic Bronchitic the prognosis is not so good and repeated attacks must be expected.

Penbritin is the answer – first time

Whether your patient suffers from Acute or Chronic Bronchitis you want your first prescription to be the one which works. You need a broad spectrum antibiotic mainly because of the possibility of H. influenzae being involved. (British evidence, 1,2,3,4, shows this to be by far the most troublesome pathogen in Chronic Bronchitis – the "English Disease"). The most active of all antibiotics against haemophilus is Penbritin, which at normal dosage achieves bactericidal levels in both serum and lung tissue to ensure a rapid clinical response and minimise the risk of relapse or complications.

Being a penicillin, the dosage of Penbritin may be safely increased in severe illness: in severely disabling bronchitis high dosage Penbritin therapy can achieve bactericidal concentrations in the sputum, eliminuting reservoirs of infection and affording the patient unprecedented freedom from infection 1. Additionally, when more rapid control of infection is imperative, Penbritin may be given by injection.

In the treatment of Bronchitis, Penbritin is the answer – first time. And so often the only prescription needed.

Bronchitis Dosage:

Children under 2 years: 62.5-125 mg. 2-10 years: 125-250 mg.

Adults:

250 mg.

All dosages q.d.s. a.c.

In severe infections these doses may be increased or Penbritin given by injection.

(High dosage regimen for severely ill Chronic

Bronchitics: 1 gram q.d.s.)

Contra-indication: Penicillin allergy. **Side-effects:** As with other penicillins.

Availability: Penbritin (ampicillin B.P.):

Capsules, 250 and 500 mg. Syrup, 125 mg./5 ml. Syrup Forte, 250 mg./5 ml. Paediatric Tablets, 125 mg.

Injections, 100 mg., 250 mg., 500 mg.

A different class of bronchodilator

MORE SELECTIVE · LONGER ACTING · MORE EFFECTIVE

A NEW STANDARD IN BRONCHODILATOR THERAPY

Previously available ß-adrenergic stimulants such as isoprenaline and orciprenaline act on the ß₁ receptors of heart muscle as well as on the ß₂ receptors of bronchial muscle. Consequently, undesirable increases in heart rate and pulse pressure sometimes occur when these drugs are used to produce bronchodilatation.

Ventolin is different: first because it is highly selective in its action, affecting primarily \mathfrak{g}_2 receptors: second, because it is more effective than existing bronchodilators: and third, because it is longer acting.

MORE EFFECTIVE

Clinical trials have shown that Ventolin Inhaler is a more effective bronchodilator than isoprenaline or orciprenaline when given by inhalation; a comparison of the effects of inhaled Ventolin, isoprenaline, and orciprenaline on Forced Expiratory Volume in one second (FEV₁) in severely asthmatic patients is shown in Fig. 1.

LONGER ACTING

Ventolin is unusually long acting, its effect persisting for at least four hours. By contrast, isoprenaline, even in large doses, has a characteristically intense but transient effect. In another study using whole-body plethysmography, inhalation of 100 $\,\mu g$ of Ventolin produced an

almost immediate maximal increase in airway conductance which was sustained for four to six hours.

MORE SELECTIVE

No side effects have been reported with therapeutic doses of Ventolin Inhaler. In studies comparing Ventolin with isoprenaline, a major difference found was that Ventolin did not stimulate the heart or affect the blood pressure, even after inhalation of a relatively large dose. (See Fig. 2.)

MORE ACCEPTABLE TO PATIENTS

Patients expressed a marked preference for Ventolin Inhaler in double-blind studies comparing Ventolin with aerosols containing isoprenaline or orciprenaline.

major metabolic activity in obesity proved by British research...

Obese patients develop a block to muscle glucose uptake causing a diversion of ingested carbohydrate to adipose tissue.

Fenfluramine is the first drug to have been shown to correct this metabolic defect.

By restoring metabolic equi-

librium fenfluramine re-activates muscle glucose uptake and diverts the ingested carbohydrate away from adipose tissue. Thus weight loss is encouraged. It is probable that the known very effective, non-cns hunger regulation of Ponderax is mediated

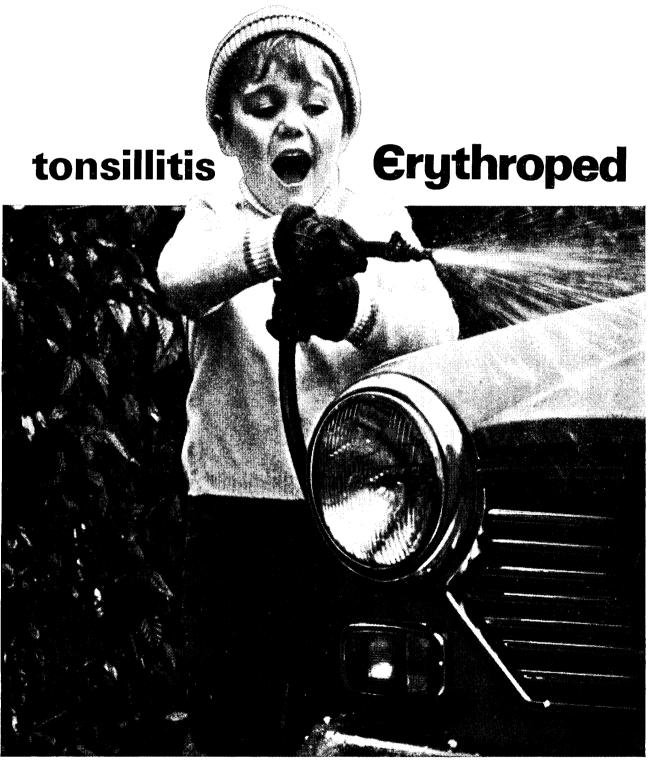

through the metabolic action. Glycoliptic agents act to restore equilibrium where an imbalance exists between the tissues in glucose and/or lipid metabolism. Ponderax is the first such agent and marks a really significant advance in treating obesity.

...PONDERAX FENFLURAMINE is the first glycoliptic agent

Ponderax also very effectively regulates hunger without stimulation

ED 123

He's up to his tricks again—his tonsillitis has cleared up, thanks to Erythroped. It dealt with his infection as decisively and safely as it deals with other common bacterial infections of childhood.

And Erythroped tastes so good that he enjoyed taking it.

Enzyme Therapy in Perspective

Views on enzymes in medicine are wide and often vigorous but reliable clinical evidence¹⁻⁵ in recent years has highlighted their value in modern therapeutics, bringing to this science a new dimension.

For many years, interest in enzyme therapy has waxed and waned. New enzymes have been discovered, tried clinically, and doubtful results obtained; experience suggests that in many cases this rejection stemmed largely from poor formulation; often from prejudice; but mostly because of a basic lack of understanding of their potential. when used correctly.

Today, as experience of enzymes in clinical practice grows, physicians throughout the world are casting aside their earlier scepticism and regarding in a new light these interesting natural aids to better medicine, patient comfort, and national economy.

EARLY DEVELOPMENT

The last thirty years have seen a dramatic growth in enzymology—from a minor discipline of biochemistry to a major science; but although it has had an important impact upon medicine in diagnosis, there has been surprisingly little application to therapeutics—until the last decade—in spite of the wealth of information accumulated about these interesting structures.

It is true that pepsin was included in the British Pharmacopoeia of 1864 and with rennin, pancreatin, ptyalin, papain and malt diastase had a long period of use as digestive aids; but the products were often poorly formulated and of erratic potency and, rightly, soon fell into disrepute.

However, of these, pancreatin still makes a significant contribution to clinical medicine in the maintenance of children suffering from fibrocystic disease⁶⁻⁹ of the pancreas. Indeed, it is interesting to note that today it is the enzymes of pancreatic origin from which most therapeutic utilization has stemmed; probably because of the great commercial interest in the pancreas as a source of insulin

In the 1930's other workers^{10–14} opened up new possibilities for the manufacture of purified enzymes on a large scale—and their subsequent therapeutic use because of reliable potency and reduced risk of sensitization.

EARLY CLINICAL APPLICATION

The availability of purified enzymes in commercial quantities in the 1940's stimulated interest in their clinical application. It was natural therefore, that Armour—one of the major insulin producers at the time—should become a pioneer of enzyme therapy.

Building upon the work of the earlier scientists, they introduced in 1950 a range of topical enzyme products based upon the proteolytic effect of trypsin on necrotic tissue, tissue exudate and clotted blood when applied to infected wounds, burns and ulcers. Subsequently, a number

of workers^{15,16} published their findings confirming the value of these products.

Earlier, the benefit of instilling trypsin into the pleural cavity to clean tuberculous and other infected empyema had been demonstrated¹⁸ and this work was later confirmed by others^{19–21} also researching in the same field.

Such clinical applications were not developed solely by Armour; other laboratories also demonstrated the potential usefulness of enzymes and extended their use by the introduction of oral and parenteral forms. Combinations of streptokinase and streptodornase have been used topically buccally, and by intramuscular injection for a similar range of indications as trypsin and well over a thousand clinical papers have been published showing the benefit of the enzyme, hyaluronidase, for promoting the re-absorption of excess tissue fluid and the spreading of injected fluids.

PROTEOLYTIC ENZYMES

Earlier development of the pancreatic enzyme trypsin led to the isolation and purification of alpha-chymotrypsin, and it was in 1956 that Armour introduced parenteral alpha-chymotrypsin (Chymar). Its effectiveness was reported by numerous clinicians and confirmed in double blind trials^{22–24} which demonstrated its value in reducing postoperative oedema.

Early in 1958 a further important use for a proteolytic enzyme was initiated²⁵ involving the use of a weak chymotrypsin solution (Chymar-Zon) as an aid to lens removal in cataract surgery. This work has since been confirmed by others²⁶ and enzymatic zonulolysis now forms part of standard practice in many ophthalmic units throughout the world.

ORALLY EFFECTIVE ENZYMES

The value of proteolytic enzymes when administered parenterally having been demonstrated, it became clear that a more convenient oral form which would provide a similar clinical effect would be of immense value to physician and patient alike.

By 1960, after considerable clinical investigation Armour were able to demonstrate the effectiveness of an enteric-coated tablet containing a highly purified activated extract of the pancreatic enzymes, trypsin and chymotrypsin (Chymoral).

At first the oral administration of these proteolytic enzymes came under criticism from sceptics who argued that enzymes could not be absorbed from the intestine because of the size of the molecule; they also argued that the mode of action was unknown.

However, it is well recognised that intestinal absorption is not dependent upon molecule size alone, so this was not a valid argument. Furthermore, there is now evidence to demonstrate that both trypsin and chymotrypsin are absorbed after oral administration²⁷⁻²⁹.

Nevertheless, recent work³⁰ has highlighted one very important factor: for optimum absorption proteolytic enzymes must be administered before food. Administration after food may well have been the cause of earlier disappointment in clinical response.

It is true that, like corticosteroids and aspirin, for example, the precise mode of action of the proteolytic enzymes is unknown: largely because inflammatory processes are exceedingly complex and the whole concept of resolution of inflammation is not yet fully understood.

On the other hand, there is growing evidence that proteolytic enzymes and inhibitors are actively involved³¹⁻³³ particularly in tissue destructive diseases and injury. Enzyme treatment for the resolution of inflammation and associated oedema, whether the action is direct or indirect, is therefore logical. Moreover, the early animal work³⁴⁻³⁷ has now been confirmed clinically by double-blind controlled trials^{1,2,4,5,38-45}.

Thus, the use of enzymes as an aid to resolving inflammation is now growing rapidly and other proteolytic enzymes, such as bromelain and papain, have also been utilised with some success; although so far not supported by the same weight of clinical evidence as the proteolytic enzymes of pancreatic origin.

This growth of the use of enzymes in medicine demonstrates clearly the increasing importance of these substances as therapeutic agents. Nevertheless, enzyme chemistry is a vast subject—and many parts are still unexplored. It is therefore inevitable that some aspects of the mode of action of enzymes are difficult to explain.

For this reason, clinical evaluation must remain of primary importance in the proof of their effectiveness and, for the time being, exact explanations of their biochemical and physiological actions remain unknown.

ENZYMES IN SOFT TISSUE INJURY

Apart from wound closure and supportive dressings, the recovery of soft tissue injury following accidental or surgical trauma has by custom been regarded as something 'best left to nature', the palliatives of analgesics and bed-rest being generally the only treatment considered necessary.

Of course, nature will more often than not take corrective action but this is so in many spheres of medicine in which the physician is expected to—and does—assist nature in the alleviation of patient discomfort.

Perhaps one reason why a more positive approach has not been employed hitherto is because there has been insufficient awareness of the effect upon the economy of the nation in leaving recovery from trauma to 'take its natural course'.

TRAUMA—ECONOMICS OF TREATMENT

From the 'Morbidity Statistics from General Practice 1958' it is clear that in 1969 over 2 million patients may be expected to present to general practitioners for the treatment of accidental trauma—apart from those who go directly to hospital.

In respect of patients whose incapacity keeps them from their work this means that the cost to the economy may be estimated as some £16 million in sickness benefits alone.

Furthermore, incapacity of the busy housewife and mother can seriously affect the productivity of the salary or wage earner.

Add to this a further 3 million presentations in hospital for accidents and various forms of surgery, other than 'general surgery', that may also be anticipated, and a formidable cost to the economy begins to emerge.

Recent clinical evidence from controlled and/or doubleblind controlled trials^{1,2,4,5,38,39-45} suggests that the prompt and correct use of enzymes in the treatment of fractures, sprains and soft tissue injury may shorten the period of patient incapacity by 40 to 50 per cent: thus considerably alleviating the cost to the nation; whether it be in sickness benefits alone, or the additional costs of treatment in hospital.

Armour believe they are making a worthwhile contribution to the national economy not only in making available for the physician products like Chymcral and Chymar to reduce the cost of treatment of trauma, but also in their continuing studies of enzyme utilisation in many spheres of medicine, their latest contribution being to demonstrate improved clinical efficiency when enzymes are administered with antibiotics (Chymocyclar).

• I feel I just can't cope anymore

The over-anxious patient needs your sympathy... and the calming effect of BENVIL

Your reassurance, understanding and encouragement play an absolutely vital part in the treatment of any patient you feel is emotionally distraught. To help you *keep* your patients relaxed, calm and attuned to the realities of life you may wish to prescribe Benvil.

In cases of acute anxiety and tension, Benvil relaxes, calms, and restores a feeling of well-being. And it does this without over-sedation, which means that patients can successfully go about their daily work – an important aid to readjustment.

Moreover, reports on Benvil suggest that it is free from dependence.

Benvil is available as a new, smaller blue capsule containing 250 mg. tybamate in an original pack of 50.

Dosage: One capsule 3 or 4 times a day. For elderly patients it is recommended that therapy be started on the lower dosage. The dosage can be increased if necessary to a maximum of eight capsules in 24 hours to suit the individual concerned.

Precautions: Side effects are mild and infrequent at the normal dosage. In the aged, hypotensive effects are possible at higher doses. If drowsiness or mild dizziness occur, the patient should avoid activities requiring optimal alertness. If symptoms of hypersensitivity occur, treatment should be stopped and appropriate symptomatic therapy given.

Consumption of alcohol or concurrent administration of other psychotropic agents (e.g. phenothiazines, monoamine oxidase inhibitors) may have an additive effect. The customary precautions should be taken in administering Benvil to patients with a history of drug

allergies, blood dyscrasias, hepatic or renal disease. There has been no evidence to suggest development of tolerance or dependence with Benvil: in common with other psychotropic agents however, it is advisable to give Benvil cautiously to addiction-prone subjects and to withdraw therapy slowly after prolonged use. Although animal tests suggest freedom from teratogenic effects, Benvil cannot at present be recommended during the early weeks of pregnancy.

Reference: Brit. med. J., (1967), **1,** 223. Further information is available on request.

BENVIL calms and restores

introducing

medihaler

With Medihaler-duo, Riker makes a further notable contribution to bronchodilator therapy. Medihaler-duo enables the physician to make a more positive approach to reversal of airway obstruction in bronchial asthma and chronic bronchitis.

Medihaler-duo takes advantage of the finding that the bronchodilator effect of isoprenaline can be significantly enhanced by the action of phenylephrine. As a result, it is possible to obtain a greater response to treatment than would be experienced from comparable doses of isoprenaline administered alone. Moreover, this enhanced bronchodilator effect is achieved without significant change in pulse rate or blood pressure at recommended dosage. These results have been confirmed in clinical trials 1,2,3,4,5,6,7. With Medihalerduo, relief is immediate in onset and often prolonged for three or more hours. Effect on the cardiovascular system has been found to be insignificant even in patients with uncomplicated hypertension.

in bronchial asthma and chronic bronchitis

Composition Medihaler-duo contains a suspension of isoprenaline hydrochloride 8 mg./ml., phenylephrine bitartrate 12 mg./ml. and delivers to the patient a measured dose containing 0.16 mg. isoprenaline hydrochloride and 0.24 mg. phenylephrine bitartrate.

Contra-indications There are no absolute contra-indications, but Medihaler-duo should be used with caution in the presence of cardiac disease, hypertension or hyperthyroidism.

Side-effects Overdosage may cause dry mouth, palpitations, or nervousness.

Dosage Each puff from Medihaler-duo delivers a measured dose. One to three puffs should be sufficient to provide relief in most cases. It should not be necessary for the patient to take further treatment for at least thirty minutes, or more than eight treatments a day.

Children Medihaler-duo should be administered to children only under the supervision of a responsible adult. Basic NHS price Standard pack (complete 400-dose unit) 17/- plus Purchase Tax.

use

first in chronic bronchitis

Bactrim[†] Roche: is highly effective in acute exacerbations of chronic bronchitis. It has an ultra-wide spectrum of activity; its dual action gives it great bactericidal potency, especially against Haemophilus influenzae-the most important pathogen in chronic bronchitis

In a trial¹ Bactrim Roche* rapidly cleared purulent sputum and produced marked clinical improvement in every one of a group of 50 chronic bronchitics, where treatment with one or more antibiotics had already failed. Bactrim Roche produces its highly potent bactericidal activity from the potentiating action of its two components-trimethoprim and sulphamethoxazole. A leading article in the British Medical Journal on 18 May 1968 drew attention to the important therapeutic potential of this bactericidal synergy.

I. Proc. V int. Congr. Chemother., 1967, I, 293. *The formulation used in this trial was different from that which was subsequently found to produce the best results and which has now been adopted.

SAFETY IN USE

Past experience suggests that misuse of aerosol bronchodilators by asthmatic patients may lead to dangerous effects on the heart or give a false sense of security to patients with incipient status asthmaticus. Ventolin Inhaler has no effect on the heart in therapeutic dosage and has a long duration of action. Both these properties provide additional margins of safety: the lack of cardiac effects should reduce any likelihood of deaths due to ventricular fibrillation and the long duration of action makes it possible for patients to realise in time if the drug is becoming less effective. Because an effective treatment with Ventolin Inhaler should last for at least four hours, patients have been advised to consult their doctor immediately if the effect lasts for less than three hours, so enabling the doctor to take timely action.

CLINICAL STUDIES

The onset of action of Ventolin by inhalation is rapid; near maximal bronchodilatation occurs within five minutes. The duration of action of Ventolin is much greater than that of isoprenaline. The results of a comparative study in severe asthmatics are summarised in Fig. 1. The effect of 1,000 µg of isoprenaline by inhalation on Forced Expiratory Volume in one second (FEV1) reached its peak at six minutes and thereafter diminished rapidly; The peak effect on Forced Vital Capacity (FVC) was reached a little later, but the pattern was otherwise similar. A significant increase in heart rate was noted soon after administration of isoprenaline, After 200 µg of Ventolin, however, near maximal response persisted for two to three hours and substantial improvement was still present after five hours. No side effects were observed after Ventolin.

CHEMISTRY

Ventolin is 2-t-butylamino-1-(4-hydroxy-3-hydroxymethyl)-phenylethanol. Its approved name is salbutamol.

The inhaler contains Ventolin base, suspended in microcrystalline form,

PHARMACOLOGY

Ventolin was discovered in the research laboratories of Allen & Hanburys Limited during a search for a β -adrenergic stimulant free from undesirable cardiovascular actions. Replacement of the 3–OH group in isoprenaline by the primary alcohol group, -CH2OH, gave rise to a new series of potent β -adrenergic stimulants. Ventolin was chosen for development because of its highly selective action on bronchial muscle, its lack of effect on heart muscle and its long duration of action.

ANIMAL STUDIES

In all the species used, Ventolin was a more potent bronchodilator than isoprenaline when administered by aerosol or by mouth and about equally active by intravenous injection. It differs from isoprenaline in being able to prevent bronchospasm without having obvious effects on the cardiovascular system. Ventolin is unusually long acting because it is not affected by catechol o-methyl transferase, an enzyme which rapidly inactivates isoprenaline in the body.

HUMAN STUDIES

Studies on asthmatic volunteers using a whole-body plethysmograph revealed that doses of 100 μg of Ventolin by inhalation produced a substantial and almost immediate increase in airway conductance which was sustained for several hours. In normal volunteers, doses of 400 μg by inhalation had no effect on heart-rate, ECG or blood pressure. 200 μg of isoprenaline had marked cardiovascular effects in the same subjects.

INDICATIONS

Ventolin Inhaler is indicated for the relief of bronchospasm in:

Bronchial asthma of all types
Chronic bronchitis
Emphysema

DOSAGE

One or two inhalations, repeated four-hourly if required. The bronchodilator effect of each administration of Ventolin Inhaler lasts for at least four hours and more frequent use should be unnecessary. This long duration of action provides a margin of safety. The patient can readily recognise any reduction in the length of action and should be instructed to consult a doctor if the effect of a previously adequate dose lasts for less than three hours.

The patient's instruction leaflet enclosed with each Ventolin Inhaler therefore contains the following paragraph:

'Dosage; use Ventolin Inhaler only as directed by your doctor. He will tell you how many puffs to take for a treatment. An effective treatment with Ventolin Inhaler lasts for about four hours. Consult your doctor immediately if the effect lasts for less than three hours. No more than eight treatments should be taken in any 24-hour period without consulting your doctor,'

SIDE EFFECTS

No side effects have been reported from Ventolin given by inhalation in therapeutic doses.

Doses greatly in excess of those needed for full bronchodilatation could cause short-lived secondary effects such as peripheral vasodilatation, minor increase in pulse rate, and skeletal muscle tremor.

CONTRA-INDICATIONS

There are at present no known contraindications to the use of Ventolin. However, care should be taken with patients suffering from hypertension, myocardial insufficiency or thyrotoxicosis. Notice should be taken of recent suggestions that the administration of any drug during the first trimester of pregnancy is undesirable.

PRESENTATION

Ventolin Inhaler is a metered aerosol, delivering 100 µg of Ventolin per inhalation, with a specially designed actuator. Each canister provides 200 inhalations.

Ventolin is a Trade Mark

Coughs and colds thrive on togetherness

Rinurel Linctus

one prescription to separate cough and cold sufferers from all their symptoms

Where other 'cold remedies' limit themselves to relieving upper respiratory distress, or cough, or aches and pains, Rinurel Linctus copes with all these symptoms together. It contains an analgesic/antipyretic, an antitussive, a decongestant and an antihistamine. It is a pleasantly-flavoured liquid, suitable for adults and children alike.

Rinurel Linctus is supplied in bottles of 4 fl. oz., each 10 ml. containing Paracetamol B.P. 300 mg., Pholoodine B.P. 10 mg., phenylpropanolamine hydrochloride 25 mg. and phenyltoloxamine citrate 22 mg. Full information is available on request.

Magmilor (nifuratel) is a powerful systemic trichomonacide. Systemic therapy is essential if the organisms which have invaded the Skene's tubules and Bartholin's glands are to be eliminated-virtually impossible by topical means. Systemic therapy also provides a simple method of treating the male consort.

This eliminates Trichomonas, Candida and Bacteria too!

Magmilor is also effective topically in the vagina against Candida, bacteria and free-swimming Trichomonas. Concurrent treatment with Magmilor pessaries therefore provides immediate broad-spectrum coverage against all types of infective vaginitis. This ensures rapid symptomatic relief with minimum delay in starting treatment-and avoids the danger of monilial overgrowth.

This is the complete package treatment for . Vulvo-vaginitis and Leucorrhoea

21 oral tablets and ten pessaries eliminate infection from all affected parts in the female. To prevent re-infection there is a special 21 tablet course of treatment for the male partner.

Female Treatment (21 oral tablets; 10 pessaries) R_x as Magmilor treatment pack.

Male Treatment (21 tablets)

 R_x as Magmilor tablets x 21. Each Magmilor tablet contains

200 mg. nifuratel.

Each Magmilor pessary contains 250 mg. nifuratel.

Full information is available on request.

B.M.J. Publications

World Medical Periodicals

(Reprint Third Edition 1961)

THIS IMPORTANT REFERENCE BOOK for authors, editors, librarians, medical schools, research laboratories, publishers, and booksellers has been reprinted in response to great demand. It gives details of over 5,800 journals of medicine, pharmacy, dentistry and veterinary medicine, which are listed alphabetically and indexed by subject and by country. Each entry gives the title in the original form. In addition, translations have been added to Japanese titles, and transliterations to Greek and Cyrillic titles (the latter in accordance with The Transliteration of Russian, Serbian and Bulgarian for Bibliographical Purposes, issued by the Royal Society, London).

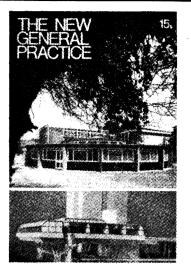

476 pages, Royal 8vo, cloth bound Price 42s. (U.S.A. \$6.00), including postage

and its

SUPPLEMENT

This Supplement brings the Third Edition of World Medical Periodicals fully up to date. It gives details of some 700 journals which have either first appeared or changed their title since 1961, the year of publication of the Third Edition.

80 pages, Royal 8vo, cloth bound Price 20s. (U.S.A. \$3.00), including postage

How do General Practitioners spend their time?

Do Appointment Systems Work—and How do Patients use them?

What Type of Work Can a General Practice Nurse do?

THE NEW GENERAL PRACTICE,

published on 24 June, answers these and many other questions. The book contains 22 articles published in the B.M.J. in the last two years, many of them describing pioneering work in the field of general practice. In his Introduction to the book Lord Platt says "Those who have already reorganized and reformed their practices will read this book with interest as they will be able to compare their own ideas with those of others, sometimes learning, sometimes having the satisfaction of knowing better."

Deny Octavo Paperback 204 pages

PRICE 15s. (U.S.A. \$2.00) postage not included.

"The general practitioner will find this book authoritative, readable, and helpful."

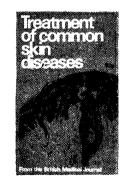

Brit. med. J. (1967), 3, 423

"All the articles are good and together they provide an excellent refresher course on the management of the commoner skin diseases seen in this country."

J. roy. Coll. gen. Practit. (1967), **65,** 327.

"The low price, clear layout, and wealth of information make this book a very good buy.."

J. roy. Coll. Phycns
(1968), 2, 167.

Treatment of Common Skin Diseases 10s. including postage

How can the Health Service be changed?

"The object of these essays . . . seems to have been to provoke people to think . . . If I may say so, this seems altogether helpful."

Maurice Bloch lecture, 1967, by The Minister of Health

"... one of the most significant and important documents published in relation to future developments in the system of medical care in Britain."

J. roy. Coll. gen. Practit. (1968), **66**, 73

"... provocative and stimulating pamphlet ... should be read by anyone interested in the problems of state medicine."

When treating respiratory tract infections

'Ilosone' specifically destroys the pathogens in tonsillitis, acute bronchitis, streptococcal pharyngitis, otitis media, and bacterial pneumonia.

'Ilosone' causes minimal interference with the natural gut flora, thus diarrhoea or gastrointestinal upset is rare.

In addition to its high activity against grampositive cocci, 'Ilosone' is also active against H. influenzae, and Mycoplasma pneumoniae. The clinical response is rapid, and the chance of relapse is small.

The range of presentations is such that 'Îlosone' can be prescribed for the whole family.

For Mum, and Dad. 250 mg[†] capsules.

For Baby, and Johnny. Pleasant tasting suspension, containing 125 mg[†] per 5 ml, for children under seven vears of age.

For Jenny, and Grandad. Pleasant, orange flavoured Suspension Forte, containing 250 mg[†] per 5 ml. An ideal presentation for older children, and all adults who need full strength dosage, but have difficulty in taking solid dosage forms.

All suspensions are presented in 100 ml bottles.

†Base equivalent.

Further information is available on request. Eli Lilly and Company Ltd.. Basingstoke, England.

'llosone' is the Lilly trade mark for erythromycin estolate.

the drugs used in its treatment.

The arthritic patient is imprisoned by the pain and disability of his condition - as well as by limitations of

Brufen is an antirheumatic agent designed to bring the arthritic patient a new measure of freedom from these constraints. Pain and stiffness are relieved, joint size reduced, pressure tolerance increased, grip strength improved and the range of pain-free movement extended. In achieving these benefits Brufen appears to be singularly free from serious side-effects. Brufen (ibuprofen) is a non-steroidal compound which exhibits the high level of anti-inflammatory, analgesic and antipyretic activity necessary for effective treatment of rheumatoid arthritis, osteo-arthritis and allied conditions. At the same time Brufen is so well tolerated that it may be taken on waking to relieve morning stiffness.

Brufen is an achievement of British research. Supplied as tablets of 200 mg. ibuprofen. Full information is available on request.

Cow&Gate-the complete Milk Food

What a baby needs is not a rich diet but the right diet.

This is what Cow & Gate provides, for it contains fat, protein, calcium, iron, the right amount of Vitamin C and enough Vitamin D to take care of those young bones. There's no need to bother with supplements when baby's on Cow & Gate.

Today, Cow & Gate is easier to mix. It's homogenised to break down all the minute particles of fat into a fine, smooth blend. With Cow & Gate baby's feed is ready in next to no time and a whole day's supply can be mixed and kept in the fridge.

Cow & Gate is the perfect milk food for a baby's delicate digestion. You can rely on Cow & Gate for any difficult feeding problems, too. For, apart from Half Cream and Full Cream, Cow & Gate make an extensive range of milk foods for almost every dietary need.

COW&GATE
The milk food of Royal babies

How would you like to get out of bed 3 or 4 times on a cold night-

In dealing with urinary frequency in the elderly the physician faces two problems. Such patients may often feel a need to micturate when urine volume is quite small or a fraction of the bladder's capacity: Cetiprin helps the doctor to control this need by blocking the innervation and increasing bladder capacity. The second problem is more intractable and requires the breaking of the established habit of frequent urination. In such cases the physician expects no immediate marked response and persists with treatment for at least 14 to 21 days. Cetiprin, time and the doctor's tolerance are all needed to overcome urinary frequency.

The alert physician recognizes that frequency is more than a distressing condition per se. He sees in it a common cause of interrupted sleep and consequent impaired physique, and of lower morale - further conditions making in-roads into his already precious time. He sees - and prescribes

Dosage: For nightly tenesmus in the adult and geriatric patient two tablets at bedtime. In chronic cases it is advisable to start with 3-4 tablets at bedtime and reduce the dose when control is established.

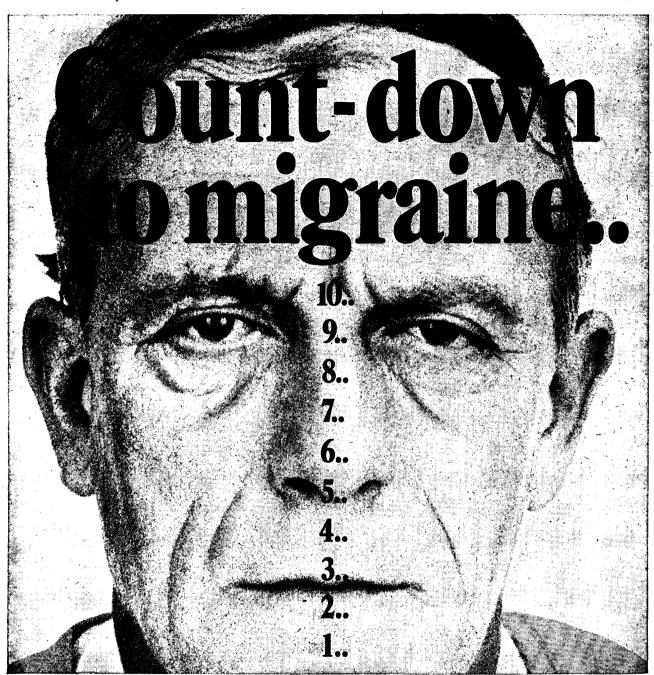

Contraindications: Gastric retention; glaucoma; large residual urine retention.

CETIPRIN (emepronium bromide); Ethyl (3,3-diphenyl-1-methyl-propyl) dimethylammonium bromide. Tablets 50 mg. Manufacturer: AB Kabi, Stockholm, Sweden. Further information from: Kabi Pharmaceuticals Limited, Bilton House, Uxbridge Road, Ealing, London, W.5. Telephone: 01-567 4717

Prondol changed her outlook on life

PRONDOL* (iprindole, Wyeth) will change your outlook on anti-depressant therapy too. You see PRONDOL not only acts quickly to bring effective relief, it acts comfortably—there are few of the distressing side-effects which so often used to accompany anti-depressant treatment. Your patients thus get more tolerable treatment and you can anticipate greater reliability. As one investigator concluded: "...iprindole (PRONDOL) is a therapeutically effective anti-depressant with an exceptionally low incidence of side reactions' (Clin. Trials J. (1968) 5:927) Further information is available on request John Wyeth & Brother Ltd. Maidenhead Berkshire

We timed our launch rather late...

but we timed Nitrong better.

For longer relief from angina pectoris.

Independent studies confirm Nitrong consistently relieves angina for 10 - 12 hours.

I. Proven blood levels.

"Nitrate blood levels in patients given Nitrong tablets were the same after 8 hours as the levels found after 6 minutes in patients given a sublingual tablet of nitroglycerin. After 12 hours the blood level was still sustained above the value (6 to 9 μ g/ml) which correlates with good control of the anginal syndrome". West. Med. 7:11, 330, 1966.

2. Proven performance.

"A new type of tablet, Nitrong, containing controlledrelease nitroglycerin, which is stabilized to maintain a constant potency, and which is released in the alimentary tract over a period of approximately 10 hours...gave marked or good improvement in 17 of 20 cases with confirmed coronary insufficiency". Sartr. Op. Med. 10, 1965.

3. Proven prophylaxis.

"... the controlled-release tablets (Nitrong) benefited all patients in that their need for sublingual tablets was diminished. The mean diminution in the need for sublingual medication was 78 per cent. Ten of 19 patients required no sublingual tablets during 14 or more days of the test period". Curr. Ther. Res. 7:12, 1965.

Basic NHS prices: 14/9 for 50s, 67/6 for 250s.

Composition: Glyceryl trinitrate (2.6 mgm) in sustained-release form — mottled, scored tablets.

Full information on request.

NEW PRODUCT

G500 TABLETS

for the effective treatment of infections of the urinary tract

New G500 tablets (containing 250 mg. hexamine mandelate and 250 mg. of the urinary acidifying agent DL-Methionine) have been specially formulated to meet the requirements of an acid urine which is necessary for the release of formaldehyde from hexamine mandelate. The very low toxicity of G500 makes the tablets particularly suitable where long-term urinary antisepsis is required. The principal applications of G500 are in prophylaxis against recurrence after attacks of acute cystitis or pyelonephritis and in maintenance chemotherapy of chronic urinary tract infections such as those associated with partial retention.

Are doctors immortal?

Some patients seem to think that doctors never die. Or become ill. Or have accidents.

But as a doctor you know that your chances of falling sick, or breaking a leg tomorrow are the same as everyone else's. And the effect on your life and family is much graver.

Your practice, for instance, must be kept going. So your income plunges overnight. And your life becomes stifled by financial worries: how to keep your family, meet school fees, pay the mortgage. To a sick man worry is a poisonous enemy.

That's why it's so wise to insure against sickness or early death. Wiser still to insure with the company run exclusively for doctors and dentists: the Medical Sickness Society.

You know that one day you may need this insurance. So write today. Together we'll find the policy which will work hardest for you.

Do it now.

Medical Sickness Society

For each of them the problem is pain

For all of them the answer is Paynocil

Lumbago or low back pain, fibrositis, muscular rheumatism—however you describe these rheumatic disorders, they mean the same thing to the patient. Pain. And the text-book therapy is the same, too—aspirin.

Then why prescribe Paynocil?

First, because Paynocil is aspirin. So it stops pain and relieves inflammation. Second, because Paynocil is aspirin with all these additional benefits:

Well tolerated: Paynocil also contains 300 mg. of glycine, which helps to distribute the aspirin rapidly into the stomach in the finest particles, thus minimising the risk of gastric irritation. Patients with rheumatic disorders who experience nausea, heartburn or epigastric pain after plain aspirin have found Paynocil acceptable.

Quick acting: Paynocil, at 600 mg. aspirin per tablet, has twice the strength of aspirin tablets B.P., and in equivalent dosage, is twice as rapidly absorbed. A property which could be of particular value—in combating the rheumatic's morning stiffness for example.

Convenient: Paynocil can be taken without water, for glycine masks the unpleasant taste of aspirin and allows the tablet to disperse instantly on the tongue in a burst of lemon flavour. The tablets come in protective foil strips which slip easily into handbag or pocket. All of which makes Paynocil a most practical form of aspirin for active people.

Junior Paynocil is available, for children, at 150 mg. aspirin per tablet.

Full information is available on request.

Happy go...

touchy!

'Saluric' can help

in the premenstrual syndrome

Women suffering from premenstrual tension with oedema cannot avoid the tiresome and inevitable signs and symptoms of this common condition, which may last for 7 to 10 days every month, prior to the menses. Because many of the distressing symptoms may be directly related to fluid retention, effective diversis usually brings prompt relief.

'Saluric' can relieve swelling of the ankles, breast engorgement, and fullness of the abdomen. It may well help to alleviate the concomitant irritability and nervousness. 'Saluric' has been proved by 10 years of clinical experience to be a dependable diuretic which can be used for those few days every month to control premenstrual tension with oedema.

Each tablet of 'Saluric' contains 500 mg chlorothiazide BP. Detailed information is available to physicians on request.

For sustained benefit in hypertension

Ismelin®

CIBA

guanethidine sulphate BP

Holds blood pressure levels constant

often just two tablets daily

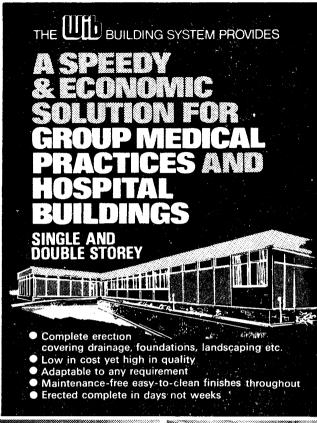

Prescribing notes

Initial dosage — two 10mg tablets daily. Frequent adjustment is unnecessary during stabilisation; intervals between consultations may be up to one month. Should 20mg daily prove insufficient, increase daily dosage by 10mg. As the action of Ismelin is gradual and prolonged, allow at least one week before any increase, to observe full effect. The majority of patients will be adequately controlled and free from hypertensive symptoms on a daily dosage of 40mg or less.

Ismelin is contra-indicated in the presence of phaeochromocytoma. Side effects attributable to postural hypotension normally reflect overdosage. Patients should be advised to avoid sudden changes of posture or violent exertion, and if morning faintness on rising persists, to reduce the daily dosage by one 10mg tablet until the next consultation. If diarrhoea is troublesome, reduce or divide dose, or add ½gr. codeine phosphate t.d.s.

Failure of ejaculation has been reported and, rarely, exertional dyspnoea, nasal congestion, shivering, muscle weakness, paraesthesiae (due to latent cerebral arterial insufficiency), aggravation of intermittent claudication, and exacerbation of peptic ulcer. In heart failure, any tendency to fluid retention may be increased. As with any anti-hypertensive, prescribe cautiously for patients with renal failure and urea retention. Allowance should be made for the antagonistic pressor action of some antidepressants (MAOI), appetite suppressants and stimulants of the amphetamine class if administered concurrently.

10 and 25mg tablets of guanethidine sulphate BP in 100's and 500's. Basic NHS price 100 x 10mg: 27s 8d 10mg amps, for i.m. inj. 6 x 1 ml NHS price — 17s 4d. Full information on request.

INTERNATIONAL MEDICAL **ENGINEERING AND AUTOMATION EXHIBITION**

(Sponsored by the U.K. Electronic Engineering Association and the Scientific Instrument Manufacturers' Association of Great Britain).

EARLS COURT, LONDON · 10-14 MARCH, 1969

THE AUTOMATION OF MEDICINE. Medical and surgical diagnosis and treatment become increasingly dependent on new engineering and electronic techniques.

The International Medical Engineering and Automation Exhibition crystallises all that is new in these dramatic fields.

It is more than the most comprehensive exhibition of its kind: It provides an "exchange and mart" for ideas between two widely separate disciplines, aiding the doctors and the engineers to bring themselves into parallel paths of endeavour.

MEDEA '69 provides a rare international occasion when medical men and engineers can meet on common ground.

International MEDEA '69 is 15 per cent bigger than the last exhibition in 1967. Its interests are wider, with extended international participation. The Israel Government presents a national prestige exhibit, and firms like AGA of Sweden, Philips of Holland, Siemens of Germany indicate how the rest of the world is reacting to expanding medico-engineering demands.

MEDEA '69 shows not only what is happening to-day but what tomorrow will offer. Hospitals and research establishments (including the RAF Institute of Aviation Medicine) demonstrate how deeply they are probing into the future.

Times: 10 am - 6 pm daily, except Thursday when open until 9 pm. INDUSTRIAL EXHIBITIONS LTD., 9 ARGYLL STREET, LONDON, W1V 2HA.

SUMMER SCHOOL IN IMMUNOLOGY SPONSORED BY THE BRITISH SOCIETY FOR IMMUNOLOGY AND THE WORLD HEALTH

ORGANIZATION Monday September 8-Friday September 12, 1969

Monday September 8-Friday September 12, 1969

The residential Summer School in Immunology will be held in the Department of Immunology of the Institute of Child Health of the University of London, under the aegis of Professor J. F. Soothill. It is intended primarily for those teaching immunology to medical, biological, veterinary and technical students who are not professional immunology, but others are welcome. The course will consist of lectures, tutorials and demonstrations and will not assume extensive knowledge of immunology. The fee for the course is £12. Accommodation is available at a nearby Hall of Residence. Applications should reach Dr. G. L. Asherson, London Hospital Medical College, London, E.1 by May 10 and should include a brief curriculum vitae and an indication of the applicant's research and/or teaching interests and his background in immunology.

COMMERCIAL APPOINTMENTS—see also p. xxxvii and xxxix

CLINICAL

Parke, Davis and Company are extending their Department of Clinical Investigation. A varied and challenging career in clinical research is offered to a registered medical practitioner aged 30-35. His duties would consist chiefly of designing, initiating, and progressing clinical trials of experimental drugs, assembling the results and assisting in their analysis. Statistical advice is available within the organisation which also provides a good library service, access to computer facilities, pleasant working conditions, opportunities for travel within and outside the United Kingdom, continuous contact with leaders in all fields of medical science and remuneration appropriate to the individual's qualifications and experience.

The successful candidate will have wide medical interests, a welldeveloped critical faculty, good knowledge of modern therapeutics and an ability to express himself concisely on paper. Preference will be given to individuals with a higher qualification, previous research experience or knowledge of European languages, though none of these attributes is essential.

The Company, now located at Hounslow, Middlesex, will be moving in about two years to Monmouthshire and the successful applicant would be expected to move. A Company car is provided and a contributory pension scheme is in operation.

Applicants should send a complete curriculum vitae to:-Personnel Director.

Glaxo Laboratories Ltd. Greenford, Middlesex

Clinical Research

We need an additional Medical Adviser, aged 25 to 32, to join a research team in the Medical Department. His duties will largely be concerned with the planning and administration of clinical investigations of established and new products. He will keep abreast of medical knowledge in a number of interesting clinical fields and will be encouraged to continue some practical work in hospital. Some travel within the UK will be required.

Glaxo Laboratories Limited, with its headquarters at Greenford, is the largest manufacturing and trading subsidiary of Glaxo Group Limited. It manufactures a wide range of nutritional, pharmaceutical and immunological products, vitamins and antibiotics for human and veterinary use. It is supported by a vigorous and expanding Research company.

Employment conditions are generous. They include an attractive pension scheme, and an opportunity to participate in Group profitability in the UK. Company policy is to promote from within where possible and so opportunities for advancement are excellent for well-qualified and able men.

Candidates should desirably have post registration hospital or research experience. They should write in the first instance, quoting reference AM.787 to E. S. Snell, MA, MD, MRCP, Medical Director, Glaxo Laboratories Limited, Greenford, Middlesex.

COMMERCIAL APPOINTMENTS

MEDICAL ADVISERS

We are extending the work of the Medical Department, which forms part of our Research Division, and intend to appoint Medical Advisers to newly created posts. The successful candidates will work closely with the medical profession and our own scientists in planning and organising clinical trials. They will be based at Ware in Hertfordshire, 25 miles North of London. Applications are invited from physicians, desirably aged between 28 and 40, who have experience of, or an interest in, human pharmacology and trials of new medicaments.

Initial salary will be negotiated and thereafter is subject to annual review. A company car will be provided.

We are a member company of the Glaxo Group and offer good conditions of employment including a pension scheme and a bonus scheme based on the Group's profitability.

Applications should be made in writing, quoting reference AM.79, to the Personnel Manager,

Allen & Hanburys Ltd., Bethnal Green, London, E.2.

SALARY SCALES OF HOSPITAL MEDICAL STAFF

Following the Seventh Report of the Review Body, new salary scales have been approved. These came into force on October 1, 1966. The scales are set out below: approved. These came into force on October 1, 1966. The scales are set out below:

HOUSE OFFICERS: Each post in this grade shall be tenable for six months.

£1.100 per annum for the posts held during the first year; £1,200 per annum for the posts held during the first year; £1,200 per annum for sold the second to the second to the second to the second to the first year; £1,200 per annum for posts held during the third and subsequent years, subject to full registration.

Deductions of £150 per annum in respect of lodging only for voluntary residence.

No deductions for lodging will be made for compulsory residence.)

SENIOR HOUSE OFFICERS: £1,450 per annum in the first year: £1,550 per annum in the second year; £1,650 per annum in the third or subsequent years.

Deductions of £175 per annum in respect of lodging only for voluntary residence.

(No deductions for lodging will be made for compulsory residence.)

REGISTRARS: £1,650 per annum, rising by four annual increments of £100

REGISTRARS: £1,650 per annum, rising by tour annual increments of £100 to £2,050.

Deductions of £175 per annum for those with remuneration at the first two points on the scale, and £200 per annum for those on the third and subsequent points will be made in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.) On assimilation to the scale for Registrars, one increment and one only shall be given for any year or part of a year in excess of two spent previously in the senior house officer grade.

Allowances at rates up to £140 per annum shall be payable to house officers, senior house officers and registrars occupying posts approved for such allowances in peripheral hospitals.

SENIOR REGISTRARS: £1,950 per annum rising by one increment of £100

Allowances at rates up to £140 per annum shall be payable to house officers, senior house officers and registrars occupying posts approved for such allowances in peripheral hospitals.

SENIOR REGISTRARS: £1,950 per annum rising by one increment of £100 and four further annual increments of £125 to £2,550.

Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

On assimilation to the salary scale for senior registrars, increments to a maximum of two shall be given for each year or part of a year in excess of three spent previously in the registrar grade.

MEDICAL ASSISTANTS: £1,850 per annum rising by fourteen annual increments of £100 to £3,250.

Deductions of £225 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

CONSULTANTS: £3,200 per annum rising by five annual increments of £185, and then by four further increments of £190 to £4,885.

Deductions of £350 per annum in respect of lodging only for voluntary residence. (No deductions for lodging will be made for compulsory residence.)

Doctors with satisfactory training will not be excluded from consideration for appointment to consultant posts on the grounds that they have spent little or no time as senior registrars.

All National Health Service hospital appointments are in accordance with the Terms and Conditions of Service of Hospital Medical Staff. Memoranda on the following subjects of particular interest have been issued by the Ministry of Health: \$\frac{1}{2}\$ Standard of Residential Accommodation, Telephone Charges, Removal Allowances, Study Leave.

Further details may be obtained from the Hospital Secretary, or B.M.A. members may obtain summaries of the Memoranda or explanatory handouts from the Secretary, British Medical Association.

PHARMACEUTICAL PRODUCTS

Readers are reminded that prescribers' literature and clinical information are always available from advertisers on request.

in staphylococcal septicaemia

powerful · bactericidal · antistaphylococcal

The potential severity of staphylococcal septicaemia demands prompt antibacterial therapy-often well before sensitivity reports become available. FUCIDIN is rapidly and easily absorbed, and gives serum levels which are bactericidal against almost all pathogenic staphylococcal strains; FUCIDIN exhibits remarkable ability to reach the nidus of infection despite poverty of blood supply or presence of pus. For early control of these dangerous infections FUCIDIN has proved a reliable and economical choice—in over five years of clinical use. For full literature and prescribing information please write to the Medical Information Department.

fucidin

Capsules, 250 mg. sodium fusidate B.P., in bottles of 36 and 250; also as Paediatric Suspension equivalent to 35 mg. sodium fusidate per ml., in bottles of 60 ml.
