## Clinical experience with chemotherapeutic agents\*

### Studies of 6,500 cases treated with cephalexin

A further 5,000 patients had been treated with cephalexin and reported in the world literature since a review of more than 1,500 cases was presented to the Sixth International Congress on Chemotherapy.

The infections reported were of the urinary tract (2,238); lower respiratory tract (1,235); ear, nose and throat (892); skin and soft tissue (610); genitals (959); septicaemia (28); endocarditis (4); osteo-articular infections (87); biliary tract infections (13); peritonitis (11); and intestinal infections (45). Satisfactory responses included (a) clinical and bacteriological cure and, (b) clinical cure or marked clinical improvement without full bacteriological clearance. A summary of the results obtained with infections of urinary and lower respiratory tracts, is given in the tables below:

#### Urinary tract infections treated with cephalexin

| Infection                              | Number | Per cent satisfactory response |

The presenters of the survey emphasised the need for the dosage to be adequate — particularly in lower respiratory infections. A statistically significant difference had been shown in favour of using 3 G to 4 G a day compared with 2 G a day for the treatment of these infections.

In most of the acute infections treated cephalexin had given excellent results. In certain chronic infections, particularly of the lung and bone, the response was not so rapid, but when treatment had been prolonged, clinical results had been very good. The adoption of higher doses, 4 G to 6 G or more daily, had widened the scope of cephalexin in the field of severe infections such as septicaemia and endocarditis. The results so far obtained with such infections had been encouraging although the number of cases treated was relatively small.

Even when cephalexin had been used in high dosage or for long periods, the tolerance had been good. Only rarely had treatment been discontinued because of side effects. When side effects had occurred they usually had been mild, many disappearing during treatment. Changes in haematological and biological parameters had been infrequent. There had been no evidence of nephrotoxicity. Cephalexin had been used successfully and safely in patients with impaired renal function, although accumulation of the antibiotic might occur in such patients unless dosage were decreased according to the creatinine clearance.

## 94% success rate with cephalexin in acute bronchitis

New clinical evidence\* shows that cephalexin has achieved a 94% success rate in acute bronchitis. 87% clinical success rate was also noted in chronic bronchitis and bronchiectasis. The total number of bronchitic patients treated with cephalexin was 460.

These excellent results in bronchitis were achieved with a remarkably low

incidence of side effects such as diarrhoea and sensitivity rashes. And it was noted that "No cross sensitivity was seen with cephalexin in the eight patients with a history of penicillin hypersensitivity."

## Cephalexin in lower respiratory infections

Research workers from Royal Northern Hospital, London, expressed the opinion, on the basis of trials they described, that cephalexin was a suitable antibiotic for lower respiratory infections requiring treatment in hospital, and for urinary infections. For the respiratory infections, daily dosages of 3 G or 4 G produced a significantly quicker response as shown by X-ray, than 2 G — without increased incidence of side effects.

Nineteen men and 16 women (aged 21 to 85 years) with chronic urinary tract infection were treated with cephalexin 500 mg six hourly for 10 days. Twenty-eight of these had abnormal excretion pyelograms. Sixty-one per cent of *Escherichia coli* infections; 80 per cent of *Proteus mirabilis* infections, and both cases of *Klebsiella aerogenes* infection were cleared at 10 days. Overall eradication of pathogenic organisms was obtained in 68 per cent of the cases. The relapse rate after 14 days was 23 per cent.

Fifty in-patients with lower respiratory infections were given orally 2 G cephalexin per day (group A); a further 60 in-patients were given a dosage of 3 G or 4 G daily (group B). The groups received treatment for seven to ten days, they were matched for age.

Eighty of the patients had bronchopneumonia, 58 with chronic airways obstruction. Nine patients had lobar pneumonia, and 15 chronic bronchitis with airways obstruction, in whom the superimposed infection was the primary reason for hospital admission. All received physiotherapy, and 21 with airways obstruction were given a bronchodilator. Every patient with pneumonia was treated for 10 days. Forty-nine per cent of the pneumonia patients in group A showed complete resolution of radiological signs on day seven, compared with 72 per cent of those in group B — a significant difference. On the tenth day, however, no significant difference in radiological signs was detectable between the two groups. Clinical cure (clear X-ray, sterile sputum, no fever, no leucocytosis) at 10 days was obtained in 68 per cent of the patients in group A and in 81.5 per cent in group B, the difference not being significant. Bacteriological eradication was obtained in 73

per cent of group A and 91 per cent of group B patients, the difference being significant.

No cross sensitivity was seen with cephalexin in the eight patients with a history of penicillin hypersensitivity. The antibiotic was discontinued in five patients; in one for diarrhoea and four for vomiting, but in two cases the drug was not wholly to blame since vomiting continued after its withdrawal. Generally cephalexin was well tolerated.

Ceporex cephalexin

### Contra-indication

Ceporex is contra-indicated in persons who have shown hypersensitivity to cephalosporins.

### Precautions

In patients treated with Ceporex, a false-positive reaction for glucose in the urine may occur with Benedict's or Fehling's solutions, or with 'Clinitest' tablets, but not with enzyme-based tests such as 'Clinistix'.

Ceporex is usually tolerated well by patients allergic to penicillin, but cross-reaction can occur occasionally.

As with other antibiotics, Ceporex should be administered with caution in patients with a history of allergy, especially to drugs. When renal function is markedly reduced, Ceporex will accumulate in the serum and tissues unless dosage is suitably reduced.

Laboratory experiments with animals and clinical experience show no evidence of teratogenicity, but as with all drugs, caution is needed during pregnancy.

### Adverse reactions

A small proportion of patients receiving Ceporex may experience gastrointestinal disturbances such as nausea, vomiting, diarrhoea, anorexia and general abdominal discomfort. As with all broad-spectrum antibiotics, superinfection (sometimes monilial) can occur, and may present as vulvo-vaginitis.

Reversible neutropenia has occurred in a few patients, but is very rare.

Generalised drug rashes — urticarial or maculopapular — are uncommon.

### Administration and dosage

Ceporex is administered orally. Treatment should continue for at least two days after the temperature has returned to normal and symptoms have subsided. However, in chronic, recurrent or complicated upper urinary tract infections a course of at least two weeks' duration may be necessary.

When renal function is considerably impaired, the dosage should be reduced. If the creatinine clearance is 20 to 50 ml/minute, the adult dosage of Ceporex should not exceed 3 grams/day; if between 5 and 20 ml/minute, not more than 1.5 grams daily; if the clearance is below 5 ml/minute, dosage should not exceed 500 mg/day.

Patients receiving intermittent dialysis should be given an additional 500 mg of Ceporex after each dialysis, i.e., a total dosage of up to 1 gram on that day.

# New facts about oral Ceporex confirm very low incidence of side effects

New clinical data on cephalexin confirms the extremely low incidence of side effects accompanying the high clinical success rate.

"Even when cephalexin had been used in high dosage or for long periods, the tolerance had been good. Only rarely had treatment been discon-

tinued because of side effects. When side effects had occurred they usually had been mild, many disappearing during treatment."\*

It all adds up to the simple fact that in acute bronchitis, you can trust Ceporex to reduce the risks and improve the results.

## Anything less than full support for topical hydrocortisone is undesirable

In addition to the production of contact dermatitis, the dangers of the selective action of topical antibiotics in the treatment of infected dermatoses are now well-recognised.<sup>(1)</sup>

Experimental studies<sup>(1)</sup> have shown, that even in healthy subjects, pyoderma developed following occlusive treatment with neomycin. It was concluded that these experiments "do emphasize the dangers which can follow the alteration of the normal flora of the skin." In view of the variety of hazards associated with topical antibiotics, it was also stated: "...serious doubt must now be cast on their routine use."

In Betadine® H/C Cream, povidone-iodine provides ideal support for hydrocortisone because it kills all pathogenic and potentially pathogenic organisms within 15 seconds of contact. "It does not allow the emergence of antibiotic resistant strains as it kills pathogenic organisms in an unselective manner."<sup>(2)</sup>

Betadine Ointment, which has no hydrocortisone

acetate content, is also available when purely antimicrobial therapy is required.

In the tradition of the famous "Clinics of North America", but with an international flavour, CLINICS IN HAEMATOLOGY presents practical, in-depth reports prepared by haematologists associated with leading medical institutions. These highly experienced clinicians describe current methods of managing all kinds of haematological disease and disorder.

Published three times each year (February, June and October), every issue is a liberally illustrated 200 page hardbound work filled with clinically useful information on the latest advances and most recently developed techniques—considerably earlier than they would appear in medical texts and in substantially greater detail than in journal articles. Every issue is a self-contained book dealing with a specific aspect of haematology. Chapters are written on invitation from the guest editor for the issue, by leading investigators, teachers and practitioners.

## 'Slow-Fe'<sup>TM</sup> patients don't have to...

Because the iron content of 'Slow-Fe' is released mainly in the duodenum and upper small intestine, providing efficient absorption with minimum intolerance. The precision-release principle of 'Slow-Fe', developed from the expertise of 'Slow-K', the most widely used potassium supplement, ensures iron is released evenly over a period of 1½ to 2 hours. This avoids high local concentrations of iron in the stomach which cause nausea and vomiting. It also prevents constipation and wastage of iron released in the lower gut.

**In two studies of 'Slow-Fe' and 'Slow-Fe folic' involving nearly 4,000 patients 93% reported no side effects<sup>1,2</sup>. This low incidence of side effects is comparable to that expected on placebo.** 'Slow-Fe' can be taken in an easy once daily dosage, presented in a press-through monthly pack. <sup>1</sup> *Clin. # Penbritin Territory

Penbritin destroys the bacteria which commonly cause upper respiratory infections and otitis media. Its spectrum of activity includes streptococci—now less sensitive to tetracyclines than they were—and *Haemophilus influenzae*. This pathogen often causes otitis media in the young and is insensitive to oral penicillins V and G.

Penbritin's decisive bacteria-destroying action, so important in treating infections in children, contrasts with the tetracyclines and erythromycins which merely inhibit bacterial growth.

As a penicillin Penbritin has a well-documented record of safety. In contrast it has been suggested that tetracyclines are "absolutely contra-indicated for children aged under 8" because of serious effects on tooth development.

(Brit. med. J. (1970), 4, 509).

Acceptability is important in choosing an antibiotic for children. Penbritin syrup, paediatric tablets and the new paediatric suspension are extremely acceptable to the young. And at the normal children's dosage, Penbritin syrup's N.H.S. cost is just 8½p a day.

**Usual children's dosage:** 125mg. q.i.d. ½–1 hr a.c.

**Contra-indication:** Penicillin hypersensitivity.

**Side effects:** As with other penicillins.

Further information is available on request.

## Now you can sleep easy

Against a background of increasing concern about the danger of barbiturate poisoning (as few as 20 or 30 tablets may prove fatal), the advent of Mogadon must be of considerable importance. Indeed, Mogadon "..... appears to be as nearly as safe as a drug can be."<sup>2</sup> Even as many as 80 tablets have produced no untoward effects. Moreover, a recent trial in the B.M.J. showed Mogadon comparable in effect to butobarbitone.<sup>3</sup> When such a drug exists, should you risk using anything else?

# The tell-tale aerosol

Prescribe *Autohaler* for a patient and you can be sure of two things.

One—that treatment will be as effective as pressurised inhalation treatment can be. *Autohaler* is operated by the breath alone. The correct dose is delivered at exactly the right point in the breathing cycle. All the dose is used (at a cost per dose lower than that of other newer aerosols\*). And because the patient gets full benefit from treatment he is less likely to take extra, ill-advised doses.

The other? *Autohaler* can warn you if treatment is being overused—perhaps a sign that the condition is deteriorating.

## How?

The *Autohaler* system does not permit test-puffing, wasted doses or repeated pumping. Knowing this you can measure the patient's true use of treatment against what you calculate he should have used. This is just not possible with ordinary aerosols.

With *Autohaler*, if the patient comes back sooner than expected for a repeat prescription, you know that his use of inhalation treatment needs examining. Only *Autohaler* gives a reasonable assurance that all 400 doses have gone into one place—the patient's airways.

\*Cost per dose from one Iso-Autohaler complete plus one replacement cartridge is one-third of a penny.

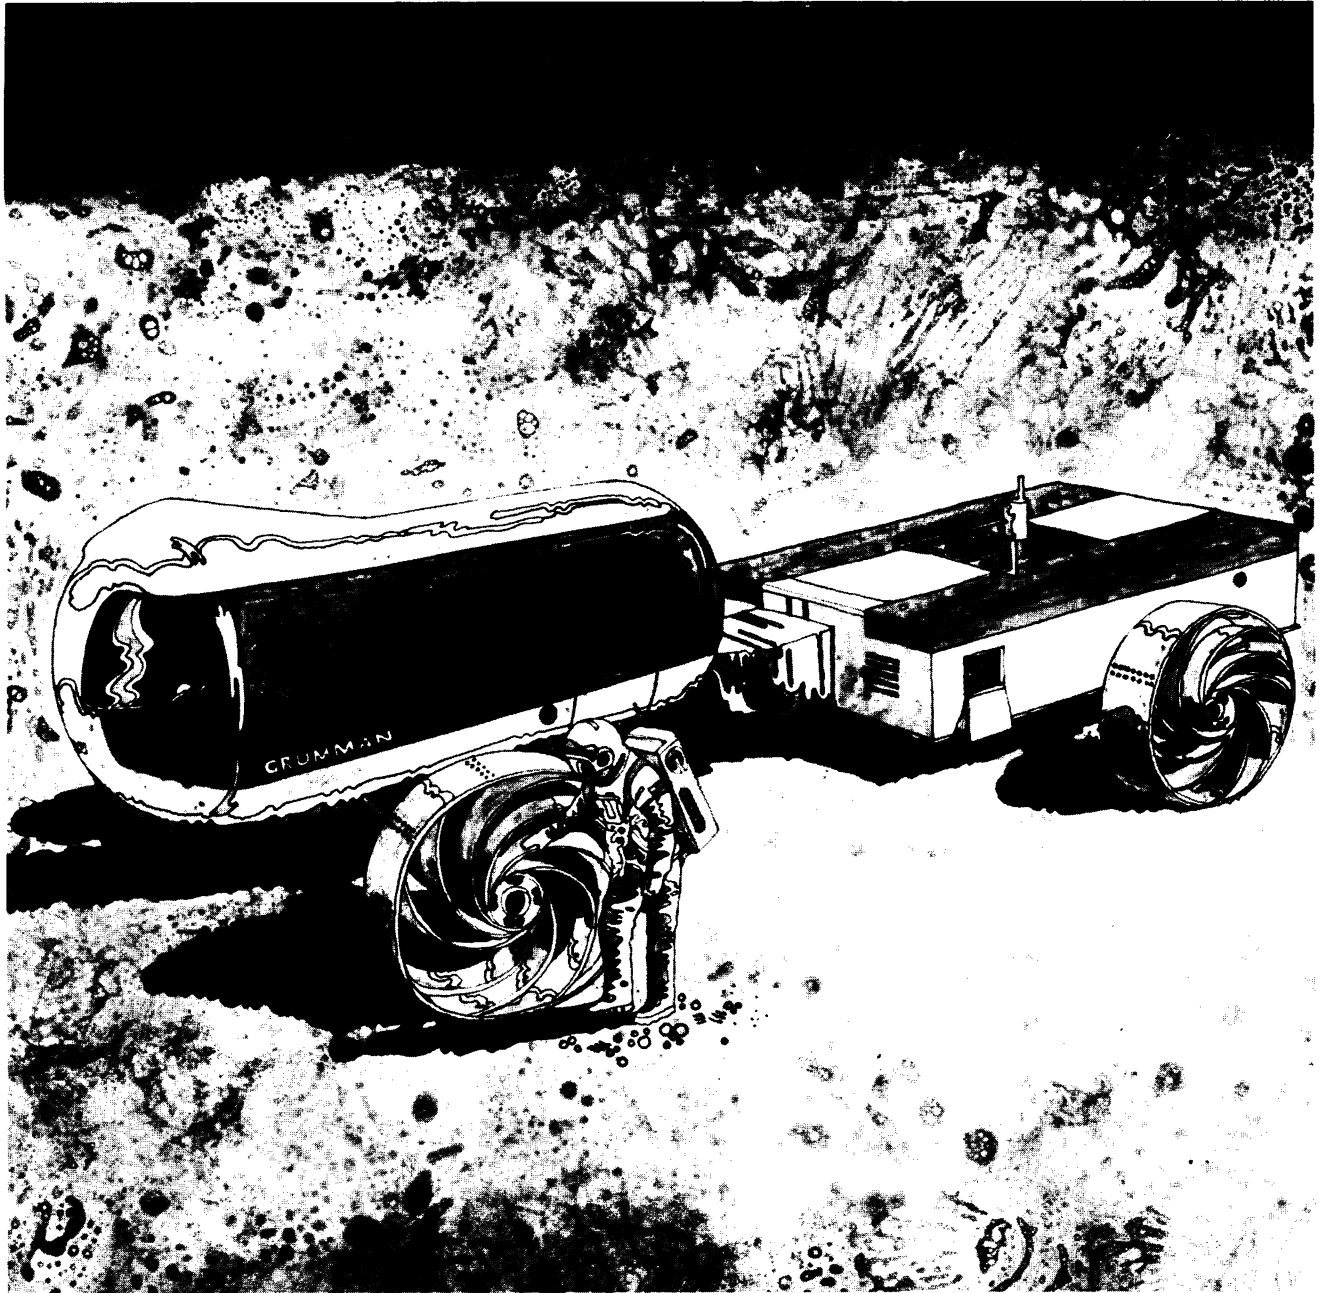

## Iso-Autohaler & Duo-Autohaler

Your best assurance that the patient will take only the bronchodilator dose he needs

**Composition** *Iso-Autohaler* contains a suspension of Isoprenaline Sulphate 8 P. 4 mg./ml. and delivers to the patient 0.08 mg. in each dose. *Duo-Autohaler* contains a suspension of Isoprenaline hydrochloride 8 mg./ml. and phenylephrine bitartrate 12 mg./ml. and delivers to the patient 0.16 mg. Isoprenaline hydrochloride and 0.24 mg. phenylephrine bitartrate in each dose. **Indications** *Iso-Autohaler* and *Duo-Autohaler* give immediate relief of bronchospasm in bronchial asthma, chronic bronchitis and emphysema. **Dosage** One to three puffs should be sufficient to provide relief in most cases. It should not be necessary for the patient to take further treatment for at least thirty minutes, or more than eight treatments a day. **Children** *Iso-Autohaler* and *Duo-Autohaler* should be administered to children only under the supervision of a responsible adult. **Side-effects** Overdosage may cause dry mouth, palpitations, or nervousness. **Cautions and contra-indications** There are no absolute contra-indications, but *Iso-Autohaler* and *Duo-Autohaler* should be used with caution in the presence of cardiac disease, hypertension or hyperthyroidism. **Basic NHS prices** *Iso-Autohaler*, complete unit £2.06, replacement cartridge £0.81. *Duo-Autohaler*, complete unit £2.20, replacement cartridge £0.95. *Autohaler* registered trade mark. *Iso-Autohaler*, *Duo-Autohaler*; trade marks. "Patients stated that their ischaemic digits had been much less painful while taking tetranicotinoylfructose (Bradilan) ..."

"During the past 10 years we have tried in a group of about 100 patients with impaired digital circulation most, if not all, oral adrenergic blocking agents with unsatisfactory clinical results. During the past 3 years we obtained more encouraging subjective and objective findings with oral tetranicotinoylfructose (Bradilan) ..."

In this double-blind controlled trial\* the patients had already taken most available oral vasodilators and were sceptical about further treatment. The authors, however, reported that most patients were delighted with Bradilan's beneficial effect. Bradilan® employs the molecule of tetranicotinoylfructose which is gradually hydrolysed in the intestine—the consequent slow, even release ensures prolonged effective vasodilation—with side reactions at a minimum.

Interest rates offered to big investors and small savers alike are many and varied, but each investment has its own particular set of terms and conditions.

Some investments tie up your savings for a fixed period of years, whilst others offer prompt withdrawal facilities.

Some are designed to provide regular income; others offer capital growth. Either may or may not be taxable.

Both may incorporate life assurance and the income tax relief then obtainable can further improve the attractiveness of the investment.

It's all very confusing unless you are a financial expert. How else can you choose a plan to suit your own particular needs and be safe in the knowledge that the Company to which you are to entrust your savings is absolutely secure?

Whether you are interested in saving a monthly sum out of salary, or making a single investment, you would be wise to consult the experts at the M.I.A. They are there to help you, as they have helped thousands of your colleagues—their advice is free and entirely without obligation.

## Important Notice

### re: Duodenal Ulcers

The reason for the failure of chemotherapy in the treatment of duodenal ulcers may well be due to underdosage. The dosage that the condition and recurrent episodes may demand of antacids, anticholinergics, carbenoxolone or sedatives is such that the resultant side effects cannot be tolerated. Whereas the standard dose for gastric ulcers may not always be effective with duodenal ulcers.<sup>1</sup>

It has now been established that Caved-S tablets prescribed in doses related to the condition of duodenal ulcer patients, can result in successful long term, safe and acceptable treatment with patients who have not responded to many other forms of therapy.

A metabolic study<sup>2</sup> and more than twenty hospital trials, and treatment with more than eight million patients in over forty countries has proven Caved-S deglycyrrhizinated liquorice is free from side effects of oedema, hypokalaemia etc.<sup>3, 4</sup>

An unpublished hospital trial, the results of which are in our hands, has been carried out with Caved-S tablets at increased dosage on forty severe duodenal ulcer patients (age range 40-65) who had all been referred for surgery has demonstrated recurrent episodes can be prevented. The report stated "Patients with severe duodenal ulcers who had been referred for surgery were divided into two groups and treated with either eight or twelve tablets daily, for eight or sixteen weeks respectively.

The higher dosage was statistically more effective than the lower dosage in preventing relapses . . ." Patients were followed up for a minimum of one year and it was concluded that,

#### GENERAL PRACTICE TRAINING POSTS

### Regional Postgraduate Institute for Medicine and Dentistry Newcastle upon Tyne VOCATIONAL TRAINING FOR GENERAL PRACTICE

Applications are invited from recently qualified medical graduates (including women graduates) for 3-year courses of training starting in July, 1972. Two programmes are offered, one based on Newcastle upon Tyne, the other on Teesside.

Each comprises three stages:

1. A 6-month appointment in a teaching general practice.
2. Successive 6-month appointments in 4 of the following specialties: Obstetrics, Paediatrics, Medicine, Psychiatry, Emergency Medicine and (on Teesside only) a combined E.N.T., Skin and Eyes.
3. A final 6-month appointment in a teaching general practice.

Every effort will be made where appropriate, to devise flexible schemes for women doctors, and in this connection any previous experience of women doctors will be taken into account.

Regular weekly seminars and visits augment practical experience and cover major aspects of general practice with particular reference to the examination of M.R.C.G.P. In addition experience for the D.C.H. and D.Obst.R.C.O.G. examinations is provided. The courses described in the B.M.J. of 2nd January, 1971, are now well established with 34 trainees in post. Salaries are at the Trainee Assistant and Senior House Officer Scale (£2,184-£2,472).

#### Dartford Hospital Management Committee

## Dartford Vocational Trainee Scheme for General Practice

Applications are invited for places in the 1st October 1972 intake to the Dartford Vocational Trainee Scheme for General Practice. The Scheme is based on the Dartford District Hospital (Joyce Green Hospital and West Hill Hospital). Trainees will be appointed to the Senior House Officer grade. Training will consist of 6 months in General Practice, 18 months in hospital posts and a final year in General Practice. Trainees will qualify for the Vocational Training Grant, on completion of the course.

The hospital posts will consist of the following:-

|                            |            |
|----------------------------|------------|
| Obstetrics and Gynaecology | - 6 months |
| Psychiatry with Geriatrics | - 6 months |
| Paediatrics                | - 3 months |
| Elective period            | - 3 months |

There will be special emphasis placed on Psychiatry, Psycho-Geriatrics and Community Care; and the Psychiatry appointment will enable the trainee to sit for the Dip. Psych. Med. Part I. The whole Scheme is recognised for the M.R.C.G.P. Married trainees will be offered the tenancy of a modern house near the hospital for the full period of training. For single practitioners, accommodation will be provided for the full period of training in the hospital medical staff quarters. Application forms and further information can be obtained from and returned to the Group Secretary, Dartford Hospital Management Committee, Bow Arrow Hospital, Dartford, Kent.

# CLINICAL RESEARCH PHYSICIANS

We have two posts, based on our Clinical Research Department at Welwyn Garden City, Hertfordshire, for registered medical practitioners interested in making a career in the pharmaceutical industry.

## 1. Cardiovascular Diseases

We are seeking a doctor aged 30-35, with a higher medical degree (preferably M.R.C.P.). A PhD or other degree in a relevant basic science would also be an advantage. The person appointed will be responsible for the clinical assessment of compounds with cardiovascular activity. Consequently, experience of investigations into  $\beta$ -blocking drugs, lipid lowering agents, renal diseases or electrolyte balance problems would be helpful. The post will involve a good deal of travel both within the United Kingdom and to certain overseas countries. We envisage arranging an initial period of 3 to 6 months as an honorary research physician in a university clinical pharmacology department.

## 2. Marketed Products

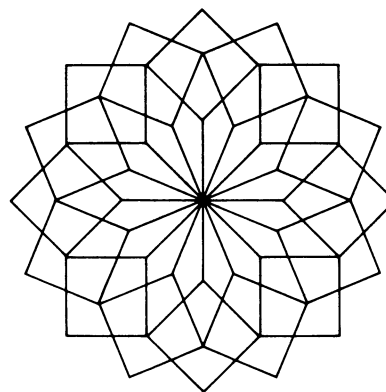

For this position, we seek a doctor aged 30-40, preferably with a higher medical qualification in some specialty; a diploma in psychiatric medicine would be a particular advantage. We are looking for someone with experience in general medical work, in both hospital and general practice. The work concerns the institution of standard trials, mainly in general practice, of established marketed products. The person appointed will need to travel widely within the United Kingdom, and must be able to work in our London Head Office, at the address below, as well as at Welwyn Garden City.

Please apply, in confidence, for job descriptions and information on the Company, together with an application form. You are asked to quote reference CP, say which post interests you, and write to the Director of Personnel at:-

## COMMERCIAL APPOINTMENTS

HOECHST PHARMACEUTICALS  
a Division of Hoechst UK Limited, wish to appoint a

Director  
of Research

THE COMPANY is a wholly-owned subsidiary of Farbwerke Hoechst AG, one of the world's largest pharmaceutical companies with a total annual research budget of over £50 million. It has been decided to establish a research centre in the UK, to be operational by 1974, and the company feels that the head of this unit should be involved in the early stages. It is intended that this unit will be involved in research concerning radio isotopes for diagnostic and therapeutic use, metabolic studies, pharmacology and toxicology.

THE SUCCESSFUL candidate, who should be between 35 and 45, must have a higher qualification and preferably an honours degree in biochemistry. He should already be involved in research at a very senior level and capable of recruiting, organising and leading a research team of the highest standard. This is an opportunity for a research scientist, possibly of professional standard, to play a major constructive role in a multi-national organisation with a proven record of scientific achievement.

## COMPANY MEDICAL OFFICERS

### Overseas Appointments

Application is invited by the Société Minière de Tenke Fungurume in Zaire (the name of the former Congo Kinshasa). The mine is managed by CHARTER CONSOLIDATED, a world-wide organisation.

The mining operations are still in an early stage, so forward planning is as important as current practice. The number of eventual employees will be many thousands, mainly local.

To support the Chief Medical Officer we wish to appoint two young capable doctors, preferably bilingual in French and English, with some experience in tropical medicine. As initial medical services are being set up, those appointed should be capable of improvisation in novel surroundings.

Appointments carry a gross remuneration of not less than the equivalent of £6,000 p.a. in addition there is a generous terminal gratuity: free accommodation: company car: allowances for children's education. Term of contract: 2 years.

Fungurume, at 4000 feet, enjoys a pleasant sub-tropical climate, and facilities for sports and leisure activities are now being developed.

Please write, giving full details of qualification and experience, to:

# Trends in Clinical Pathology

## Essays in Honour of Gordon Signy

This book is no pious collection of personal tributes but a survey of the old and the new disciplines in clinical pathology since the second world war — research in atherosclerosis and ischaemic heart disease, progress in medical virology, microbiology and cytology, the impact of antibiotics on medical bacteriology, chemical pathology and also molecular defence, haematology in mid-century, including haemostasis and blood transfusion. The place of fibrin in the story of hyalin is another modern study, so also is that on automation. The outlook on some members of the family Enterobacteriaceae is changing, and the 'old' forensic medicine is indeed new. And those pathologists working in the under-developed countries are not forgotten. The contributors are internationally renowned.

# Opportunities abroad as Company Medical Officers Important: varied: well-rewarded

ANGLO CHARTER  
INTERNATIONAL SERVICES  
APPOINTMENTS  
DIVISION

You are offered the prospect of a tour of duty — for as little as one year — in Zambia. The nation's major mining organisation is Nchanga Consolidated Copper Mines Ltd., with an international staff of technical specialists. The engineering complexes on the copperbelt are among the most modern in the world.

The company is responsible for providing full medical care to its employees and their families. Its employees number over 30,000, and the total of persons to be looked after is about 150,000. Zambia is one of the most prosperous and rapidly developing of the newly independent African countries, but it still has to turn to the older countries for its medical staff (mostly the U.K.) and there is still a lot to be done medically for its people, especially the children.

*Where you fit in.* N.C.C.M. Ltd. employs a staff of over 40 doctors and specialists, and approximately 147 fully qualified nurses. There are 5 well-equipped hospitals (814 beds), together with 16 clinics and 8 main first aid dressing stations.

General Duty Medical Officers will be involved in preventive and curative medicine, surgery, anaesthetics, gynaecology/obstetrics, public health and nutrition; and although the mines have a strict safety code, an amount of accident work can be expected.

Contracts may be negotiated for periods of one to three years. Locums can also often be arranged. There will certainly be time to enjoy the almost unique facilities for recreation and social activity in an interesting African country.

Salaries will depend on experience, but the minimum is K7,200 (£4,000) per annum. In addition there is a cash settling-in allowance: a detached, furnished house with garden is provided for £1.50 per week; and children receiving secondary education overseas are granted up to £500 per child per year towards school fees and two free return passages to visit their parents during holidays.

*Income Tax is lower than in the U.K. Also, Exchange Regulations allow you to send home up to 33½% of gross income.*

The hospital of 230 beds treats in excess of 7,000 inpatients per annum and the annual outpatients attendance rate is 100,000 and increasing. The hospital offers a comprehensive emergency service through its Accident and Emergency and Intensive and Coronary Care Units, which contain very advanced and sophisticated equipment. The full time medical staff numbers 25 and includes a Pathologist, Radiologist, Anaesthetist and Registrars in 6 disciplines as well as Senior and Junior Resident Medical Officers — a re-development programme is currently being planned to cater for a large and expanding community. Salary ranges from \$Aus.8,743 to \$Aus.9,631 per annum dependent upon experience and qualifications. Further information available from the undersigned. J. J. Smith, Chief Executive Officer. (H9459) 61-1

## PATHOLOGIST

## SPLENDID OPPORTUNITY SYDNEY AUSTRALIA

One of Australia's busiest pathology practices has an immediate vacancy for a senior experienced person to be pathologist in charge. The practice has recently relocated in a brand new air conditioned building near the centre of Sydney and has the very latest automated equipment.

A salary in excess of \$A.15,000 will be negotiated — a car and other benefits are available.

All reasonable costs of travel for self and family, together with furniture removal, will be met — assistance with accommodation could also be available.

Arrangements for early interview in London can be made by sending your curriculum vitae to the address below — please include telephone number.

Write to: "Senior Pathologist," C/o Anderson Jeffress Advertising Limited, 23/28 Fleet Street, London EC4Y 1NE. (17962) 61-1

WHEN IT COMES TO BLOWING TRUMPETS . . .

**There's more to Ventolin than any other bronchodilator**

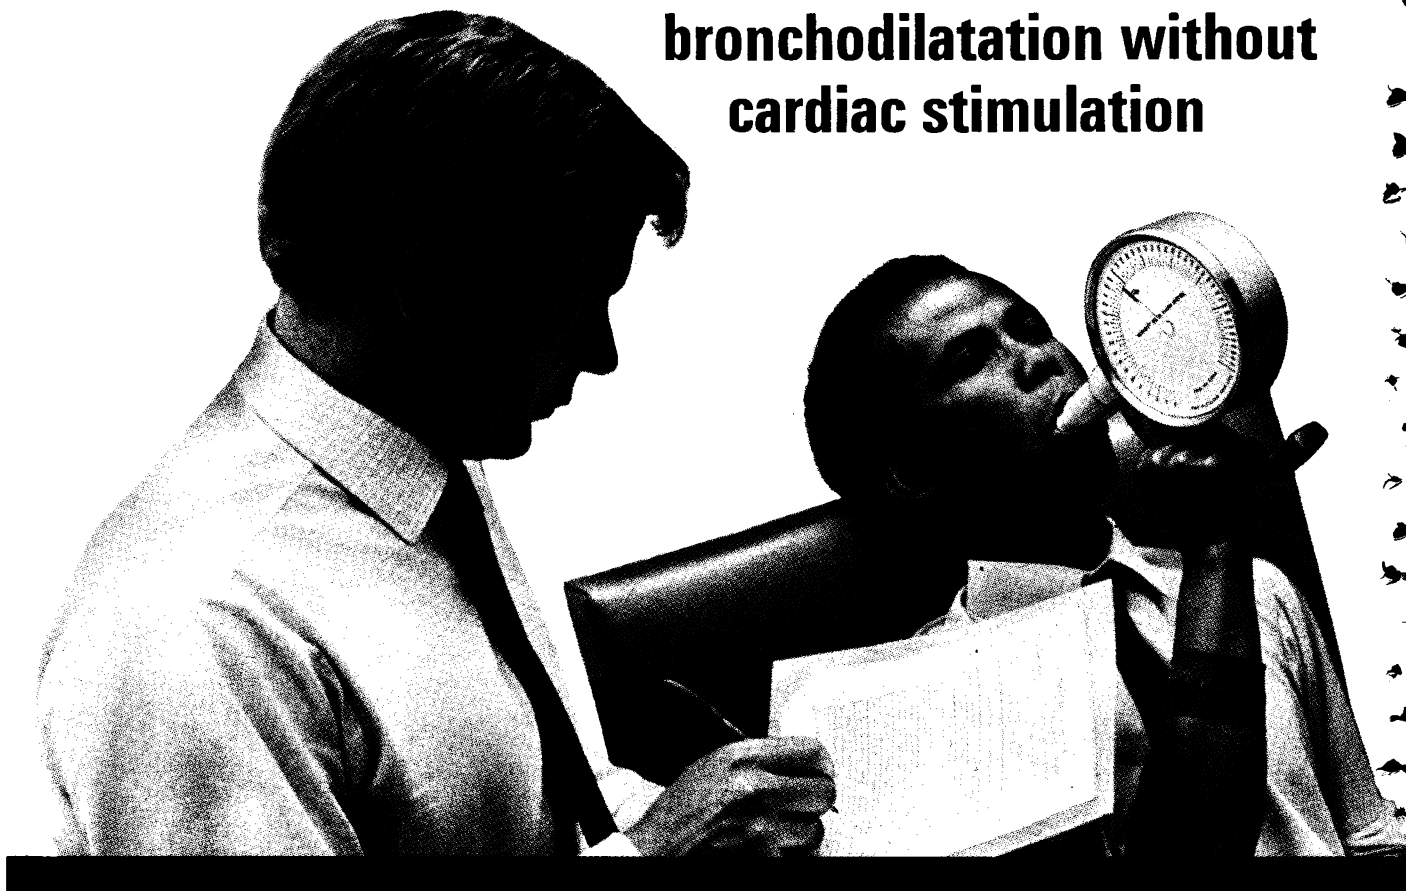

*For aerosol therapy in asthma and chronic bronchitis*  
**Ventolin Inhaler provides the drug  
of choice.**

"It seems clear, therefore, that because of its effectiveness in producing bronchodilatation, its long duration of action, its lack of cardiovascular stimulant action, and its lack of tendency to produce falls in  $\text{PaO}_2$ , salbutamol (Ventolin) is the most effective drug at present available by aerosol inhalation for the relief of asthmatic airway obstruction."  
*(Brit. med. J., 1970, 2, 23)*

"It is suggested that salbutamol (Ventolin) is the aerosol of choice."  
*(Brit. J. Dis. Chest, 1970, 64, 37)*

Ventolin Inhaler is a metered aerosol, delivering 100mcg of salbutamol per inhalation, with a specially designed actuator. Each canister provides 200 inhalations.

**VENTOLIN for effective  
bronchodilatation without  
cardiac stimulation**

*And for oral therapy in asthma and chronic bronchitis...*

## **Ventolin Tablets and Ventolin Syrup provide the drug of choice**

Of the available oral bronchodilators with  $\beta$ -adrenergic stimulant activity, Ventolin "is the drug of choice at the present time".

*(Postgrad. med. J., 1971, 47, 181)*

"Oral salbutamol (Ventolin) appeared to be as effective a bronchodilator as the aerosol."

*(Brit. med. J., 1970, 1, 65)*

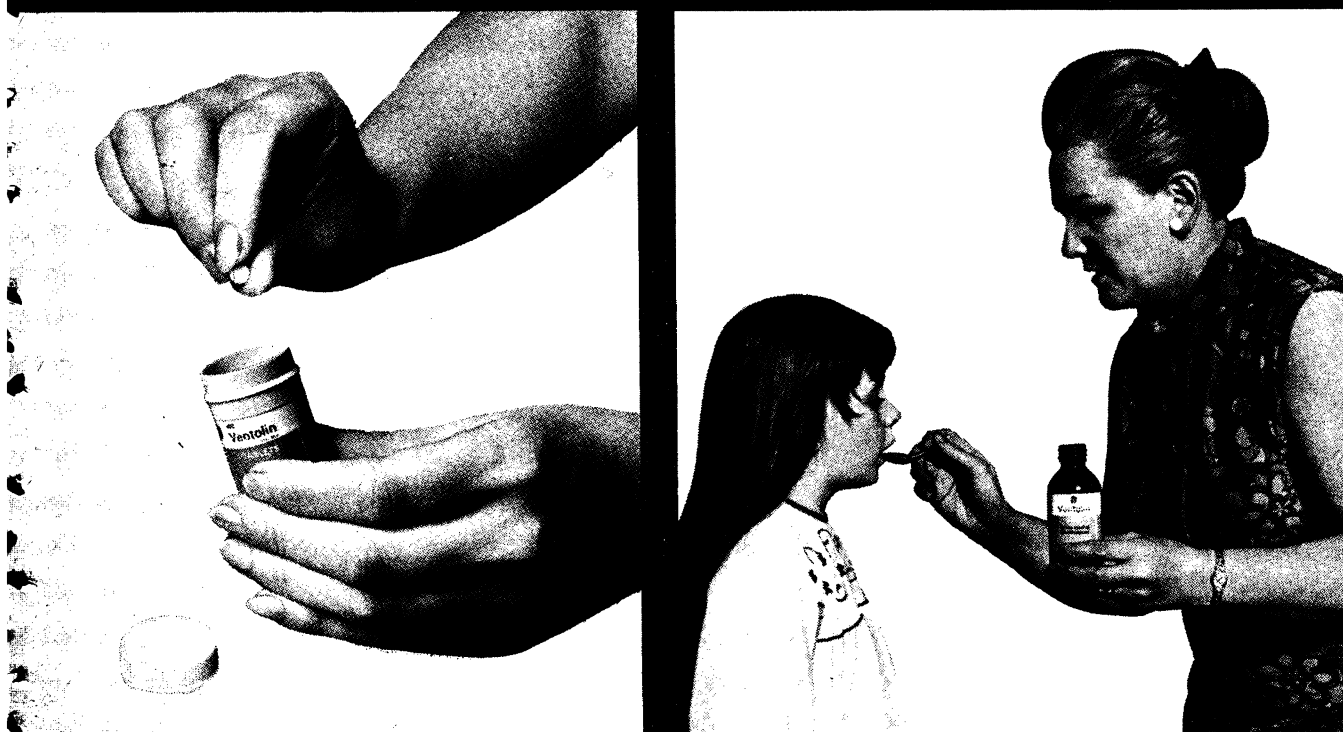

Ventolin Tablets each contain salbutamol 2mg as sulphate and are supplied in packs of 100 and 500.

Ventolin Syrup contains salbutamol 2mg as sulphate per 5ml dose and is supplied in bottles of 150ml.

## **VENTOLIN—a real advance in bronchodilator therapy**

In infected eczema, it's the eczema you worry about.

And no combination of anti-infectives will stop the scratching that starts the infection that results in infected eczema.

But Betnovate-N will.

And it will do it quicker than other preparations designed to combat infected eczema, because it contains betamethasone as 17-valerate, a more effective steroid.

Betnovate-N also contains neomycin so it stops the infection at the same time.

All at a price others can't match.
