first

SEPTRIN ensures coverage against all likely bacterial pathogens.

fast

SEPTRIN rapidly obtains effective blood levels with simple twice daily dosage.

decisive

SEPTRIN crushes bacterial resistance with a bactericidal action which differs essentially from that of the antibiotics

Superior to either ampicillin or tetracycline as judged by reduction in sputum purulence or sputum volume.^{1,2}

"... not only are the two primary pathogens, *Strep pneumoniae* and *H influenzae*, sensitive, but so are the secondary invaders such as klebsiella which often replace them after antibiotic treatment."³

"... can only be considered excellent on the criteria originally specified, namely the elimination of the infecting micro-organism."⁴

Asthma. Should your bronchodilator patients be on Intal?

Intal

prevents the attack.

Specific local action on mast cell.

No diminution of therapeutic effect.

No danger of misuse.

No significant side effects.

Dosage may be adjusted to individual patient needs.

Used from the start, Intal may help reduce the severity of the condition. "... the longer the patient can be kept free of attacks the less likely asthma is to return."³

Bronchodilators

used when the attack is under way, thus do not prevent damage to lung tissue. This can result in loss of elasticity of the bronchioles and lay the lungs open to chronic infection.

Only benefit areas which they can reach. Cannot always penetrate to areas in spasm, thus hyperventilation of the unaffected areas can occur while the obstructed areas get little or no relief.

Diminution of therapeutic effect can result in habituation and misuse.

"While a causal relationship between increased use of pressurised aerosol preparations and the epidemic of asthma deaths has not been conclusively established, the circumstantial evidence is so strong that every care should be taken to avoid excessive use of pressurised aerosols for the treatment of asthma in the future."¹

Cardiovascular stimulation. "... that aerosol propellants are potent cardiovascular toxins—has been confirmed over and over in every species tested."²

Convenient, instant use. But convenience must be measured against dependence and possible misuse.

Symptomatic relief only.

A recent trial* shows Prinalgin to be superior to high dose aspirin by all the normal criteria of improvement in rheumatoid arthritis.

In particular, one feature of the trial really stands out: After 91 days (13 weeks) the superiority of Prinalgin becomes increasingly significant.

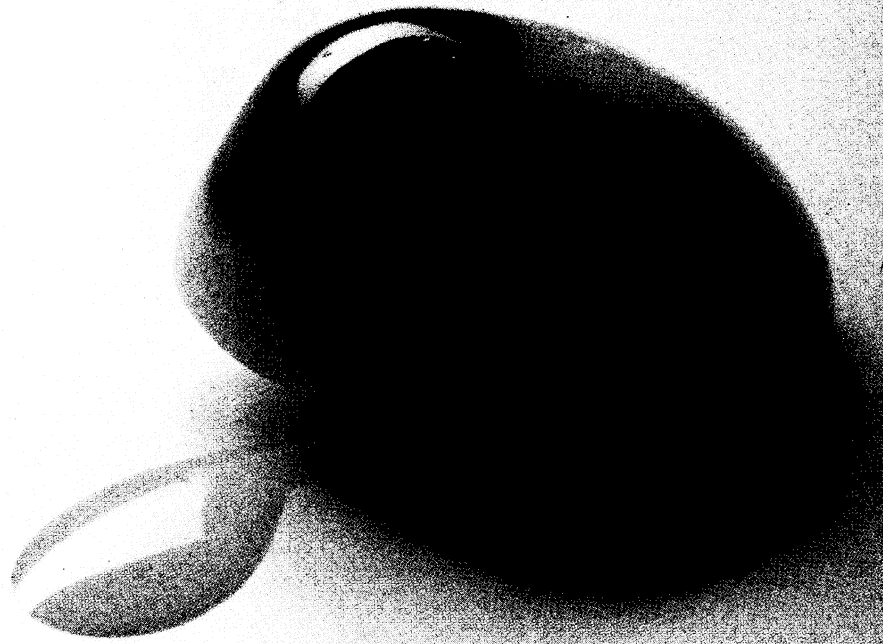

The conclusion is obvious: long lasting improvement in rheumatoid arthritis is better achieved with Prinalgin than high dose aspirin.

Cough Suppressant

BENAFED reduces the frequency and severity of coughing through the actions of Benadryl* and dextromethorphan, the most widely used non-narcotic antitussive.

BENAFED reduces the cough-triggering post-nasal drip, decongests the sinuses and relieves nasal stuffiness through the action of pseudoephedrine.

BENAFED exerts an effective expectorant action through recognised expectorant agents ammonium chloride and sodium citrate which help to loosen tenacious sputum.

BENAFED makes breathing easier through the bronchodilatory actions of Benadryl* and pseudoephedrine without the marked central-stimulant action of ephedrine.

Dyspepsia

If antacids were the complete answer, would he return to your surgery so often?

Antacids deal with excess acid. But, in many cases, dyspepsia involves more than this.

Unpleasant symptoms such as dyspepsia, heartburn and gastritis can frequently be traced back to disturbed gastric motility. Recent research has shown that in many patients food is retained for too long in the stomach, gastric contents enter the oesophagus, and bile refluxes from the duodenum.¹

With Maxolon, you can resolve this underlying problem. Maxolon restores gastric motility to normal, so that symptoms of dyspepsia are prevented.

Prescribe Maxolon (tablets or syrup) for your dyspepsia patients. They—and you—will appreciate the difference.

**How much Caved-S can an
intractable duodenal
ulcer patient take?**

**For a full year without relapse,
12 tablets a day for up to 16 weeks***

The Practitioner

June 1973 Vol. 210 pp. 820-823

* This dosage regimen was established in a recent trial of Caved-S on patients all with intractable duodenal ulcer and a history of more than six relapses in the year prior to the trial. Of twenty patients receiving 12 Caved-S tablets a day for 16 weeks, 12 had no relapse in a full year's follow-up, and the other 8 had two or one relapse in the follow-up year. All these patients had actually been referred for surgery, but surgery was avoided in all cases. Another similar group of 20 patients received 8 Caved-S tablets a day for 8 weeks - the condition of patients selected was too serious for controls with a placebo. Of this second group 3 had no relapse, 7 up to two relapses, and 10 up to 4 relapses in a year's follow-up.

No significant side effects occurred. Only one patient discontinued treatment, and he later resumed treatment successfully.

The authors conclude:

"Caved-S . . . should be given in high dosage before surgery is attempted in patients with duodenal ulcer who fail to respond to a low dose or other treatments."

Stand up all those not using Betnovate!

Betnovate—the most widely prescribed topical corticosteroid preparation for the treatment of dermatitis and eczema.

More patients with these conditions are successfully treated with Betnovate than any other therapy.

Betnovate acts rapidly and effectively, and usually gives dramatic relief from unpleasant itching.

And when infection is likely to complicate a condition, Betnovate with neomycin is available as Betnovate-N.

Presentation: Betnovate and Betnovate-N are presented as cream or ointment in 15, 30 and 100 gram tubes.

PUBLIC HEALTH

LONDON BOROUGH OF LAMBETH
Directorate of Health Services

SENIOR MEDICAL OFFICER
(Child Health)
Applications are invited for the post of Senior Medical Officer in the Directorate.
The successful candidate will work in the field of the school health service as well as of younger children.
The Borough has one of the largest school populations in the Inner London Education Authority area with ten special schools providing special education for the whole range of handicapped pupils. The under-five care is intensely orientated toward paediatric developmental assessment which is carried out in special clinics, as well as in district and regional assessment centres. There is close liaison with the paediatric departments of local hospitals ensuring a high standard of community paediatrics. The successful candidate will work in close co-operation with the Principal Medical Officer for School Health and the Principal Medical Officer for Child Health (who is also a senior lecturer in community paediatrics).
Postgraduate experience in clinical paediatrics and an interest in the social aspects of child health is essential and postgraduate qualifications an advantage. Facilities for in-service training are available and participation in research will be encouraged.
On re-organisation of the National Health Service, the Borough will form part of the Lambeth/Southwark/Lewisham Area Health Authority (7), Area 7, with a population of 800,000 and including 3 teaching hospital groups.

Bencard inject commonsense into the treatment of hay fever

New Pollinex is commonsense because it offers all the benefits of the immunological approach to the treatment of hay fever in a streamlined and simplified form.

Pollinex contains *modified* extracts of the twelve grass pollens which cause most hay fever in Britain – *modified*, by a unique process. The result is that unwanted side-effects are to a large extent eliminated, without affecting the stimulation of antibody production which protects the patient against hay fever.

The *modified* active material is adsorbed on to a natural base which is fully metabolised in the body. The result is simpler, safer, prevention of hay fever.

Only three injections

Only three injections are required, and pre-filled disposable syringes ensure trouble-free administration and accuracy of dosage.

Simplicity with safety

With simplicity goes safety.

The active material in Pollinex is released slowly but completely for maximum efficiency and minimum risk of side-effects.

Preventive therapy

With Pollinex the immunological approach to the treatment of hay fever becomes a really practical proposition, so many more patients experience the relief which comes from preventive therapy.

Pollinex is prescribable on form E.C.10 and is available from stock. An illustrated booklet with full information on Pollinex (regd.) is available from

Bencard, Freepost, Brentford, Middlesex.

Any similarity between Burinex and other diuretics is purely beneficial (and so are the differences.)

Different in Chemistry

Burinex* is a new chemical entity, being derived from metanilamide; it is quite distinct from any available diuretic. Despite careful search by such techniques as autoradiography, it has not been possible to detect any metabolite in the human.

Different in Pharmacology

Burinex differs in pharmacological potency, with a dose about one-fortieth that of any other short-acting diuretic. After oral administration, diuresis normally begins at 30 minutes – "peaks" at 90 minutes and is largely complete within three hours.

Beneficial in Effect

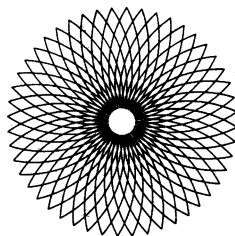

Burinex has been shown to be of value in clinical practice, not only for the seriously ill patient where a rapid diuresis is required but also for maintenance, where the predictable effect can be utilised to fit the patient's domestic circumstances and work routine. During long term treatment Burinex has proved to be very well tolerated.

Beneficial in Price

The price of Burinex is significantly less than any comparable diuretic. The long term use of Burinex would therefore represent a considerable saving in cost.
