

MODERN PHARMACEUTICAL PRODUCTS

NOVOCAIN

The Non-irritant Local Anæsthetic; contains no Cocaine.
Awarded Gold Medal XVII. International Congress of Medicine, 1913.

TRIVALIN

SUBSTITUTE FOR MORPHIA

No after-effects (vomiting, cardiac and respiratory troubles). More powerfully anodyne. Produces painless consciousness.

DIGIFOLIN

"CIBA"

A NEW DIGITALIS PREPARATION, of exact strength and dosage, and non-irritant to the stomach and tissues.

Digifolin contains all the cardio-active glucosides of digitalis leaves in natural proportions, free from all superfluous and deleterious substances (saponins, etc.). Digifolin has been found by the frequently-repeated tests, experimental and clinical, of skilful observers, to have the full digitalis effect in strengthening the heart and producing diuresis.

One ampul (1 c.c.) and one tablet of Digifolin have each been proved to be pharmacologically equal to $1\frac{1}{2}$ grains of Digitalis Folia Tirata (1911).

The ampuls contain all the effective glucosides of digitalis in sterile aqueous solution; Digitoxin, which is almost insoluble in crystalline form, being present therein in an amorphous state.

Both ampuls and tablets have been found to retain their full effect and stability after being kept for several months.
