

" . . . the British spas are located in a tonic and invigorating island climate. All . . . are tonic, relatively to those of the Continent . . . the treatment is more invigorating . . . the need for an 'after cure' . . . not so much felt."

Extract from a recent address by Mr. Robert Fortescue Fox, M.D.Lond., F.R.Met.S., as reported in the "Royal Society of Arts Journal."

Bromo-Iodine Waters

The physician who knows the influence of climate upon balneological treatment will appreciate these authoritative words, followed later, as they are, by these:—"Within the British Islands there is, however, enough variety of climate to give some of the Spas a more tonic and others a more sedative action."

These Six Spas are the most remarkable not only for the wide choice of climates they afford, but equally for the extraordinary variety of waters. Moreover, the balneological service is so skilled and thorough that the physician can send his patients to any of the Six, confident of their benefiting to the full by the rich natural resources of the Spa.

Particulars of these Six Famous British Spas will be forwarded by F. J. C. BROOME, Spa Federation Secretary, Harrogate, or of any individual Spa by the Spa Manager at that Spa.

P.C.B.—10.

*The following COLLOSOLS are now in general use:—*

COLLOSOL IODINE.	COLLOSOL CUPRUM.	COLLOSOL HYDRARGYRUM.
COLLOSOL ARGENTUM.	COLLOSOL MANGANESE.	COLLOSOL ARSENICUM.
COLLOSOL SULPHUR.	COLLOSOL FERRUM.	COLLOSOL ANTIMONIUM.
