## THE MACKENZIE-LEWIS POLYGRAPH.

An improved form of MACKENZIE  
POLYGRAPH designed by Sir T.  
LEWIS

Among its advantages are:—

1. Lag and distortion of wave form are minimised by the construction of the tambours and receiving chambers.
2. The glycerine pelotte is used as the receiving chamber.
3. The paper passes in a direction which assists the ink to flow.
4. The instrument in its case is complete, ready for use—no connecting or disconnecting required.
