Milkal makes Baby glad!

MILKAL

THE CLEAN MILK

Is Milk and only Milk

Apart from Natural Milk, there is no better food for baby than dairy milk—just milk, not patent “preparations.” But it must be clean milk. Milk free from those disease-carrying bacteria; milk with all the essential life-giving health-producing properties retained—this is Milkal—DRIED full cream milk straight from Devon in a tin. Here is the average analysis:—

Moisture	... 1-50%	Lactose	... 39-27%
Fat	... 26-00%	Ash	... 6-06%
Protein	... 27-17%	Preservative	... NIL.

More and more doctors and nurses are recommending Milkal every day.

This is what one of them (Ref. No. 61) says:—“I have not met with any other preparation of milk so thoroughly satisfactory in every respect. I shall continue to use it and to recommend its use to others with confidence.”

Sold by Chemists, 1-lb. size, 3/6
Dairymen and Grocers ½-lb. size, 1/9½

Distributed and recommended by

J. LYONS & CO., LTD.,

Bovo-Lactin

These preparations are rich in Animal Protein. They contain also hæmoglobin, milk solids, and carbohydrates.

THE following Clinical Notes regarding the use of Bovo-Lactin preparations in widely divergent conditions are selected from others received recently from the members of the Medical Profession. They fully substantiate our claim that Bovo-Lactin preparations have a clear indication in all cases where an easily assimilated, highly nourishing and palatable food is required.

MALIGNANT STRICTURE OF OESOPHAGUS.

MALIGNANT STRICTURE.
A case of malignant stricture of the oesophagus. Patient age 71. He was unable to swallow any food even liquids. He was in a debilitated and emaciated condition. A gastrostomy was performed about two months ago, since then he has been fed solely on "Invalid Bovo-Lactin" and "Bovo-Lactin Essence" with milk and brandy through a tube. He has gained much in weight, is now quite strong, walks about all day, and is able to care for himself. (Signed) ———, M.D.

MYOCARDIAL DISEASE.

MYOCARDIAL DISEASE.
The patient was in a very advanced stage. Age 72. He was refusing all forms of food both liquid and solid. He became tired of the ordinary meat extract preparation. He was first put on "Invalid Bovo-Lactin" and later on to the "Bovo-Lactin Essence, and he took both these preparations quite easily. His desire for food has returned and he now eats normally and is up and about again. I feel confident that these preparations so strengthened him that he was able to tide over the critical stage of his illness. (Signed) ———, M.D.

DEBILITY.

The Essence I gave to a very debilitated patient who has been losing weight rapidly for some time. After one week's trial he gained 2 lbs. in weight, which I consider a very excellent result. (Signed) ———, M.D.

ACUTE SUPPURATING APPENDIX.

Case of a Medical man with a suppurating appendix. This was removed and an attack of general peritonitis supervened. He was desperately ill and quite unable to retain anything in his stomach, "Invalid Bovo-Lactin" was ordered and he was able to assimilate it at once. The patient eventually made a good recovery. (Signed) ———, M.D.

These preparations are manufactured in the Company's laboratories under the strictest medical supervision. Constant chemical and bacteriological examinations of the various products are made to ensure absolute purity. They contain no drugs or Preservatives.

FOOD PRODUCTS, LTD.,
11, Queen Victoria Street, London, E.C. 4.
