

THE EMULSION FOR CHILDREN

In many of the wasting diseases of childhood, a sensitive, irritable stomach and intestines preclude proper nourishment. Under the administration of Angier's Emulsion these organs become pacified and retentive, digestion is strengthened, and the assimilation of food is normal and complete. It is oftentimes surprising how quickly pale, flabby, weakly infants and children gain flesh, strength, and vitality when they are given the Emulsion systematically.

We confidently urge its trial in marasmus, scrofulosis, inherited tuberculosis, anæmia, and in the malnutrition associated with acute infectious disease. It is likewise one of the most useful and dependable remedies for the treatment of bronchitis, whooping-cough, and the respiratory affections associated with measles and scarlet fever. The pleasant cream-like flavour of Angier's Emulsion and its ready miscibility with milk or water, make it eminently suitable for administration to children. They almost invariably like it.
