

The strain of protracted effort under conditions of war

is frequently the cause of **Vagotonia**, with the spastic condition which it sets up in the digestive tract, and its tendency to produce excessive acidity in the stomach.

Magsorbent with Atropine Tablets

successfully combats these irregularities, combining the following advantages:—

1. A corrective control over the general vagotonic state.
2. A local atropine effect whereby gastric secretion is reduced and abnormal muscle-spasm is overcome.
3. The prolonged antacid action and adsorptive properties characteristic of Magsorbent.

FOR REGULARITY AND COMPLETENESS

Regularity of defaecation does not necessarily represent a healthy bowel condition. Many individuals who boast of their regularity may still suffer from fragmentary elimination. In these persons with their incomplete once-a-day habits the rectal neuro-muscular tension is scarcely ever normal. This results in headache, lassitude and other symptoms usually ascribed to intestinal toxæmia.

Sound bowel function calls for completeness of evacuation as well as regularity. In addition, the movement must be easy. This healthy condition can be achieved safely and effectively by a dose of ENO'S 'FRUIT SALT' taken each morning

before breakfast. A distinguished pharmacologist has recently written: "A saline draught in the morning is trustworthy and rapid."

ENO'S 'FRUIT SALT' does not interfere with the passage of chyme through the small intestine, and it has no disintegrating effect on the delicate intestinal mucus. Its laxative action is dependent only on the natural process of osmotic diffusion, as a consequence of which there is sufficient bulk in the alimentary canal to stimulate peristaltic action. ENO'S 'FRUIT SALT' does not act by irritation of the intestinal nerve-endings.
