

## PROLONGED ADMINISTRATION

In the choice of a sedative for prolonged administration, toxicity assumes greater importance the longer the period of treatment.

A safe yet potent analgesic for continuous treatment is offered to the physician in 'Anadin' Tablets. The sedative and antipyretic qualities of acetphenetidin and aspirin are, in 'Anadin,' potentiated by the addition of quinine and caffeine.

Potency and uniformity of action are assured without high dosage of any single component. Devoid of any opiate or barbiturate, toxicity and powers of habit formation are negligible. Gastric intolerance is seldom encountered.

**Indications.** Neuritis, cephalgia and mild insomnia. Influenza, acute rheumatism and other pyrexial conditions. Rheumatoid arthritis, fibrositis, myalgia, dysmenorrhoea.

### Formula

Acetphenetidin	gr. iii	Caffeine Alkaloid	gr. ½
Ac. Acetylsalicylic	gr. iii	Quinine Sulphate	gr. ½

Good —  
'PETROLAGAR'

These are the words which invariably greet the doctor when prescribing 'Petrolagar' for children.

Children find the emulsion delightful to take, as they like the pleasant creamy taste. The parents also appreciate this safe, non-habit forming aid to bowel movement. The doctor most of all is gratified with the therapeutic efficacy of 'Petrolagar.'

### IN 2 VARIETIES

- PLAIN
- PHENOLPHTHALEIN
