## Concrete FOUNDATION

PREFABRICATION in medicine is no new problem: it lies at the root of successful maternity. Today it has new complexities—how best to make children yet unborn proof against the effects of dietary deficiencies, aggravated by years of rationing. The expectant mother cannot afford to draw on her reserves in teeth and bone to build that solid *concrete foundation* in the embryo. The nursing mother cannot give these vital minerals, calcium and phosphorus, unless there is corresponding intake. 'CALFOS' is widely accepted

as the answer to that problem. Providing calcium and phosphorus in true natural ratio with the trace elements found in healthy bone, 'Calfos' builds sound teeth and bone, gives every mother and child the minerals essential to increase resistance and preserve good health.

### Clinical Notes

- One 'Calfos' Tablet contains 5 gr. of the natural mineral constituents of bone, extracted without the use of chemicals.
- 'Calfos' makes available calcium and phosphorus in concentrated form and in natural ratio.
- Metabolic balance trials indicate that 'CALFOS' provides calcium in its most assimilable form.
