The importance of protein during pregnancy and the nursing period

CLINICAL observation shows that the increased protein anabolism during the latter part of pregnancy, and particularly during the nursing period, requires more protein than was at first considered necessary. Adequate protein is, therefore, desirable to ensure the ample supply of breast milk.

The inclusion of high-grade protein foods in the diet of pregnant women is now a standard practice. In cases where there is loss of appetite

or a general feeling of exhaustion, the diet can be effectively supplemented by protein foods in a form which is easy to assimilate.

Brand's Essence is a first-class protein of animal origin. Being partly hydrolysed, it is capable of easy ingestion, digestion and absorption. It is extremely palatable, and may be taken either as a jelly or as a liquid. It helps to support

convalescence and assists in restoring a positive nitrogen balance.

Clarks Curator Heel

— but the child with valgus feet would feel the difference at once. If T-irons and surgical boots can possibly be avoided doctors will do so, recommending instead a light-weight corrective heel. In certain foot-ailments and leg weaknesses Clarks

"Curator" heel is of great benefit. The child won't feel "marked out" from others, since the heel is almost unnoticeable.

Full details are available to the medical profession and to children's clinics and hospitals, on application to Clarks.

Can easily be fitted to certain Clarks shoes in sizes infants' 7 to maids' 5½ (youths' 1½).

C. & J. CLARK LTD. (Shoemakers since 1825) STREET, SOMERSET.

Important to Doctors ordering Surgical Stockings

To obtain the best results for your patients it is not sufficient to order "Elastic Stockings". You will secure for them the recognised additional benefit of two-way stretch hose if you write in full "LASTEX TWO-WAY STRETCH" on your prescriptions.

CALPED

ANTI-PRURITIC FUNGICIDE

CALPED provides the fungistatic properties of Parachlorophenylether and Phenylmercuric Nitrate and exerts a marked inhibitive action over a wide range of pathogenic fungi, including Microsporon audouinii, Monilia albicans, Trichophyton mentagrophytes (gypseum) and Trichophyton rubrum (purpureum).

The anti-pruritic action of CALPED Cream relieves itching associated with Dermatophytoses and Vulvovaginitis, and can be applied over long periods without risk of toxic reaction.

CALPED is available as a cream or powder. For the treatment of Dermatophytoses the application of the cream is recommended until the infection is cleared. The powder may be used if dry application is indicated, or as a prophylactic measure against re-infection.

INDICATIONS: Dermatophytoses, Tinea Pedis, Tinea Cruris and Monilia infections.

PACKS. *Calped Cream:* Containing Parachlorophenylether 0.5%, Phenylmercuric Nitrate 0.004%, in a Bentonite Cream base. Available in 1 oz. Jars.

Calped Powder: Containing Parachlorophenylether 2%, Phenylmercuric Nitrate 0.004%, in an Amylum Powder base. Available in 4 oz. packs.

Samples and literature on request.
