## Pre-Natal Diet and the course of Pregnancy

The normal functioning of the reproductive  
organs during pregnancy depends, among other  
things, upon the plentiful intake of vitamins and  
minerals.

Medical opinion is gaining ground that there is  
an increased need for Vitamin B in late pregnancy  
and the early puerperium. Its administration  
during the period before childbirth has resulted in  
less vomiting and nausea and in marked improve-  
ment in the nutritional value of the breast milk.  
In order to assure the building of the foetal bones  
*in utero* and afterwards during breast-feeding, the  
importance of Vitamin D and of calcium and  
phosphorus is also established.

In Supavite Capsules the practitioner has at  
hand a combination of these and other essential  
vitamins and minerals in a scientifically balanced  
form of particular value in maternity cases.

## HÆMODUCTOR —MODEL 'H'—

### HOSPITAL SUCTION APPARATUS

The model 'H' Hæmoductor has been designed especially  
for use in the operating theatre. It consists of a twin-  
cylinder pump driven by a 1/6 h.p. induction motor which  
produces a vacuum of 60 cm. Hg. An automatic control  
cuts off the suction to the bottle when the liquid reaches a  
predetermined level. The capacity of the bottle is 4 pints.  
A notable feature of this machine is that the motor can be  
left running while the bottle is being changed. A resetting  
push button is situated in the centre of the bottle cap.
