The importance of protein during pregnancy and the nursing period

CLINICAL observation shows that the increased protein anabolism during the latter part of pregnancy, and particularly during the nursing period, requires more protein than was at first considered necessary. Adequate protein is, therefore, desirable to ensure the ample supply of breast milk.

The inclusion of high-grade protein foods in the diet of pregnant women is now a standard practice. In cases where there is loss of appetite

or a general feeling of exhaustion, the diet can be effectively supplemented by protein foods in a form which is easy to assimilate.

Brand's Essence is a first-class protein of animal origin. Being partly hydrolysed, it is capable of easy ingestion, digestion and absorption. It is extremely palatable, and may be taken either as a jelly or as a liquid. It helps to support convalescence and assists in

restoring a positive nitrogen balance.
