

Pre-Natal Diet and the course of Pregnancy

The normal functioning of the reproductive organs during pregnancy depends, among other things, upon the plentiful intake of vitamins and minerals.

Medical opinion is gaining ground that there is an increased need for Vitamin B in late pregnancy and the early puerperium. Its administration during the period before childbirth has resulted in less vomiting and nausea and in marked improvement in the nutritional value of the breast milk. In order to assure the building of the foetal bones *in utero* and afterwards during breast-feeding, the importance of Vitamin D and of calcium and phosphorus is also established.

In Supavite Capsules the practitioner has at hand a combination of these and other essential vitamins and minerals in a scientifically balanced form of particular value in maternity cases.

ASH FENESTRATION DRILLS

Ash Fenestration Drills are specially designed to meet the ever-increasing demand for the long-shanked surgical drills required in the Lempert Fenestration and other operations on the labyrinth.

Produced in consultation with eminent surgeons, they are

available in a range of five cutting and five polishing drills as illustrated.

Ash Fenestration Drills will also prove invaluable in any bone operation where it is required to drill at the bottom of a relatively deep cavity.

*To assist
convalescence*

Invalid Bovril is a highly concentrated form of Bovril for use in the sick-room. Prepared without seasoning,

it provides the maximum concentration in the most easily assimilated form. Many doctors recommend it in cases where the patient needs "building-up" after illness. Perhaps there is a patient of yours who would benefit from a course of Invalid Bovril?
