In the form of Solprin

aspirin can be better tolerated in large doses over prolonged periods.

'Solprin' is a soluble, stable and palatable tablet providing pure calcium aspirin. That is, Solprin overcomes the physical and chemical disadvantages of both aspirin and calcium aspirin, and combines the advantages of both.

Unlike ordinary aspirin, Solprin is substantially neutral and soluble: and unlike calcium aspirin it does not decompose during manufacture and storage. Thus Solprin combines the analgesic, sedative and anti-rheumatic effects of aspirin with the solubility and blandness of pure calcium aspirin.

Extensive clinical trials with Solprin show important results such as might be expected of so excellent a combination of properties. Except in cases of extreme hypersensitivity, Solprin can be tolerated in large doses over prolonged periods without the development of gastric and systemic disturbances.

The replaceable barrel means great economies in the long run

The glass barrel is protected by a metal casing and breakage risk is thereby reduced to a minimum. If the glass barrel is broken only the glass barrel and piston need be renewed.

Spare barrels are supplied complete with individually fitted pistons. Users however are advised to order a spare barrel when they buy the syringe; this permits instant replacement.

All components can be taken apart or assembled in a few seconds.

No cement or solder is used and sterilization can be done at temperatures up to 200° C. The metal piston must be withdrawn during sterilization but there is no need to dismantle the rest of the syringe.

IMPROVED PRESENTATION

FOR IRON DEFICIENCY ANÆMIAS, ferrous sulphate is universally accepted as the most efficient compound for oral administration. The improved method of presentation in 'Plastules' ensures *maximum* absorption and utilisation. The tasteless, easy-to-swallow capsules rapidly disintegrate and the ferrous sulphate in a semi-solid condition is quickly absorbed, with avoidance of gastric irritation. The addition of Folic Acid stimulates production of erythrocytes, and the dried yeast increases appetite and re-inforces the action of the iron.

'Plastules' are available in four varieties: Plain; with Liver Extract; with Folic Acid; and with Hog Stomach.

The complete answer for macrocytic anæmias

Clinical experience over a decade has established that the administration of Anahæmin constitutes the most effective form of treatment for pernicious anæmia.

Anahæmin produces, with small and comparatively infrequent doses, a prompt and satisfactory erythropoiesis in patients in relapse, it ensures the

maintenance of a normal erythrocyte level in patients in remission and is effective in preventing the onset of subacute combined degeneration of the cord. Anahæmin has also been found to be of value in the treatment of herpes zoster and post-herpetic neuralgia. The suggested dosage is 4 ml. on alternate days until relief is obtained.

PHARMACEUTICAL SPECIALITIES (MAY & BAKER) LTD DAGENHAM

Introducing

DORMUPAX

**AN IMPROVED BARBITURIC HYPNOTIC OF GOOD
COMPATIBILITY AND WIDE THERAPEUTIC MARGIN**

The House of Hommel have now made available for general distribution in this country 'DORMUPAX', a strong hypnotic agent whose high efficacy derives primarily from its inclusion of the *calcium salt of n-butyl-allyl-barbiturate*, presented for the first time in the new product.

FORMULA	Each Tablet of	{	Calcium n-butyl-allyl-barbiturate	3.75 grains
	'Dormupax' contains		Carbromalum B.P.C.	1.5 grains

PHARMACOLOGY Comparative experimental studies show that the therapeutic index of *n-butyl-allyl-barbituric acid* is superior to that of the majority of commonly used barbituric acid derivatives, i.e. of butyl, ethyl, isopropyl and phenyl structure. In animal studies the therapeutic index (DE/DL) is as low as 0.27. It has also been shown that the quotient DE/DL is even more favourable for the calcium salt than for the acid.

The molecule of *n-butyl-allyl-barbituric acid* reaches the sleep centre unchanged. After an average sleep duration of 8 hours, it is completely degraded to an indifferent form. The efficacy of 'Dormupax' is reinforced by carbromalum. The latter is a prompt, safe, medium strength hypnotic which is free from after-effects.

CLINICAL DATA 'Dormupax' has been thoroughly investigated in several mental asylums. Because the dosages are often much above the normal standard in these institutions, which comprise senile, disturbed or schizophrenic persons, the two most important factors for a hypnotic — efficacy and compatibility — could be examined in detail. The results were highly satisfactory. In cases of senile, motor-restless patients the efficacy was very good on dosage of half a tablet in the afternoon and one tablet in the evening. Disagreeable after-effects could not be observed.

Excited insane patients tolerate 4 tablets daily in a course of 2 to 4 days without any deleterious after-effects. For hypertonics the concurrent administration of 'Hypersyn'-Hommel proved to be very effective.

INDICATIONS Insomnia due to psychic causes or pain — Insomnia in cases of various diseases, especially circulatory diseases or arteriosclerosis — Spastic vascular states. In these cases the combination of 'Dormupax' and 'Hypersyn'-Hommel is indicated.

DOSAGE Maximum daily single dose: 2 Tablets; maximum daily dose: 5 Tablets. Further information on dosage supplied in literature on request.

PACKS: Standard Tube of 12 Tablets; bottles of 250 (Dispensing). Samples of 'Dormupax' available on personally signed request of physicians only [Sch. IV] from the Medical Dept.

'LETHIDRONE'

The morphine antidote

'Lethidrone' brand N-Allylnormorphine Hydrobromide is an antagonist of morphine, pethidine, amidone ('Physeptone') and related analogues. Extensive clinical investigations in the United States have led to published reports providing conclusive evidence of its value. Animal tests carried out in this country have confirmed its efficacy.

'Lethidrone' acts centrally—apparently by receptor competition—and very quickly, effecting a recovery often in a matter of seconds. It has been used successfully in clinical cases of morphine and amidone overdosage, resulting in dramatic respiratory and circulatory improvement without significant loss of sedation. The recommended dose of 'Lethidrone' is 10-40 mgm.

'Lethidrone' brand Injection of N-Allylnormorphine Hydrobromide is available in boxes of 6 ampoules, each containing 10 mgm. in 1 c.c. Further information may be obtained from 183-193, Euston Road, London, N.W.1.

Treatment of FINGER INJURIES with ELASTOPLAST PLASTER

Sprains and reduced dislocations of the fingers, and STABLE fractures of the phalanges and metacarpals, may be treated by the following method:—

The injured finger is strapped to an adjacent uninjured finger by two strips cut from a 1" wide Elastoplast Plaster. The strapping is applied transversely around the two fully extended fingers

so that the interphalangeal joints are not covered.

The above method of strapping prevents lateral movements of the injured joints; allows the fingers to be fully flexed and extended, and prevents stiffness of the joints and permanent limitation of movement often associated with other means of immobilization.

Produced by T. J. Smith & Nephew Ltd., Hull. Outside the British Commonwealth, Elastoplast is known as Tensoplast

penicillin without tears

Children fear injections. There is increasing evidence that they (and adults) may be spared parenteral penicillin and be given it by mouth with equal therapeutic effect.

For infants, injections entail disturbance and handling. It is now accepted that for them, the administration of penicillin by mouth is the method of choice.

'Eskacillin' is the ideal oral penicillin for infants and children. It is liquid and may be given simply by teaspoon or mixed with the infant's feed; and it is palatable so that even recalcitrant children take it willingly and without fuss.

COMBINED ACTION

Because the B vitamins appear to act synergistically, many doctors, when prescribing these vitamins, prefer to recommend a natural source which supplies most of the essential factors.

As a dietary source of the B vitamins Marmite has been found to be particularly useful, since it supplies riboflavin (1.5 mg. per oz.) and nicotinic acid (16.5 mg. per oz.) as well as folic acid, pantothenic acid, pyridoxin, biotin, choline, inositol and *p*-aminobenzoic acid. Marmite can be incorporated in the diet in a variety of ways and it is therefore easy to administer adequate quantities.

The modern ulcer patient is more fortunate. Almost immediately, Gelusil* Antacid Adsorbent coats the inflamed or ulcerated areas of the gastric mucosa against injury by the acid gastric juice. At the same time, Gelusil provides swift relief of symptoms through the physical adsorption of hydrochloric acid by aluminium hydroxide; magnesium trisilicate prolongs the antacid activity through chemical reaction. Constipation, so frequently associated with ordinary alumina gels, is absent with Gelusil tablets and Gelusil does not interfere with the absorption of minerals such as calcium and phosphorus from the diet. Petrol—don't talk about it

—unless you're a Javelin owner. Then you don't so much mind the subject of miles per gallon.

You see, an honest average of 30 m.p.g. is what you usually get on ordinary trips—and the Javelin's impressive performance thrown in.

Of course if you're always driving really hard you'll use more petrol. But by and large, even making free use of the outstanding acceleration you'll be around the 30 m.p.g. mark or perhaps a bit better.

There's a lot built into the Javelin that doesn't really show until you have one in your hands—real family comfort—economy—and performance (a maximum speed of 80 m.p.h. and 0-60 in 24.3 secs.).

The 1953 Javelin has the new series III engine.

She had a really good night Doctor

A patient rests particularly comfortably on an Intalok mattress, yet is firmly supported in a natural position. The unique Intalok spring system makes this possible. Large numbers of fine gauge springs flex gently under 'local' pressure, but, because they are interlinked coil by coil right through the mattress, their combined resilience over larger areas is firm and even. The complete rest Intalok brings makes a real contribution to the patient's recovery.

Here are other good reasons why Intalok is the ideal hospital mattress :

- 1 All metal parts are rustless—can be sterilized repeatedly.
- 2 The spring centre gains by repeated stoving.
- 3 There are no tufts or piping to collect dust—and the mattress is light for easy handling.
- 4 Intalok mattresses can be made to special thicknesses or sizes, or in segments to suit special cases.
- 5 Existing hair mattresses can be converted to Intalok. This cuts costs.

- 6 Every Intalok springing unit is guaranteed for ten years.

INTALOK IS A PRODUCT OF THE SLUMBERLAND GROUP

The facts about Glucose

Glucose, a term used to include a substance resulting from the partial hydrolysis of starch, is in practice a general description rather than a precise one. It is applied to medical preparations which contain additives that may not always be wanted and to commercial products of varying degrees of refinement. To identify Glucose in its purest form, and *only in this form*, the term Dextrose is used.

Dextrose, as found in the blood and tissues, is the sugar into which the body converts all carbohydrates. Requiring neither digestion nor chemical alteration, Dextrose is used by the body as a source of immediate energy.

The Dextrose (pure medicinal Glucose) produced by the Pharmaceutical Division of Corn Products Company Limited is prepared in two convenient forms:—

Dextrosol Powdered Glucose

This contains no additives of any kind. It can be taken in large quantities without causing nausea, and should be prescribed in all cases where a patient needs a source of heat and energy with the least demand on the digestion. Packed in 1 lb. & ½ lb. packets.

Dextrosol Karo Glucose Syrup

for Infants and Children

An appetising blend of pure Glucose and selected carbohydrates, carefully balanced to provide the ideal sugar addition to the milk diet of artificially-fed infants. Of special value in cases of nutritional disorder. Spread on rusks, bread, etc., it offers an excellent supplementary source of energy for growing children. Packed in 1 lb. tins and jars which carry recommended feeding tables.

Professional samples of both Dextrosol products will be gladly provided. For further information, doctors are invited to write to the Dextrosol Information Bureau, Wellington House, 125/130 Strand, London, W.C.2.

Applicants should state name, address, age, nationality, qualifications, and enclose 3 copies (unless otherwise specified) of recent ★ testimonials with short statement of experience and appointments held.

Applications should be sent at once if no closing date is given.

Canvassing in any form will disqualify.

★ *SERVICE MEMBERS may have difficulty in supplying recent testimonials, but this should not deter them from applying.*

Deferment of recruitment for "R" practitioners (i.e., practitioners liable for call-up under the National Service Acts) is granted at the discretion of the Central Medical Recruitment Committee and (in Scotland) the Scottish Central Medical Recruitment Committee. The Committees normally allow an "R" practitioner to hold a First House Officer post (N.H.S. salary £350 per annum) provided that it commences within three months of the end of his deferment by the Ministry of Labour as a whole-time medical student; and a Second House Officer post (N.H.S. salary £400 per annum) provided that it is secured before the end of his First House Officer post and commences within one month thereafter.

An "R" practitioner requires the special written permission of the C.M.R.C. or (in Scotland) the Scottish C.M.R.C. to proceed to a Third House Officer post (£450 per annum).

Under present arrangements in England and Wales the C.M.R.C. normally allows an "R" practitioner to proceed directly from a Second House Officer post to a Senior House Officer post (£670 per annum) for one year, but this practice will be discontinued on January 1, 1953.

An "R" practitioner who completes six months in a Second House Officer post on or after January 1, 1953, will require the special written permission of the C.M.R.C. or Scottish C.M.R.C. to proceed to any further post.

SALARY SCALES OF JUNIOR GRADES OF HOSPITAL MEDICAL STAFF

Registrar Grades, Whole-time

(a) **REGISTRAR**: Posts obtained normally not less than two years after registration as a medical or dental practitioner and held normally for two years: £775 per annum in the first year; £890 per annum in the second and any subsequent years.

(b) **SENIOR REGISTRAR**: Posts obtained normally not less than four years after registration as a medical or dental practitioner and held normally for three years: £1,000 per annum in the first year; £1,100 per annum in the second year; £1,200 per annum in the third year; £1,300 per annum in any subsequent years.

Other Grades, Whole-time

EDUCATIONAL

F.R.C.S. POSTAL COURSES FOR PRIMARY AND FINAL EXAMS (EDIN. and ENG.).
—Full details from H. C. Orrin, F.R.C.S., Surgeons' Hall, Edinburgh.

EDINBURGH POSTGRADUATE BOARD FOR MEDICINE

GENERAL SURGERY

Three months' courses of postgraduate Surgery are arranged to start on March 23 and September 28, 1953. These are suitable for surgeons requiring refresher courses in the current outlook on general surgery, or for graduates preparing to specialize in surgery; approximately 275 hours of instruction are provided. Fee £31 10s.

INTERNAL MEDICINE

Courses lasting twelve weeks, suitable for graduates wishing a refresher course, or to specialize in Medicine, begin on March 30 and September 28, 1953. These courses consist of 320 hours of instruction, comprising lectures, clinical demonstrations, and ward visits. Fee £31 10s. Additional instruction in Clinical Paediatrics is arranged in conjunction with the course in Medicine, for which there is a small fee: the numbers are limited.

REFRESHER COURSE FOR GENERAL PRACTITIONERS

The twentieth fortnight Refresher Course for General Practitioners will start on May 4, 1953. Fee for graduates not claiming expenses from Government sources, 10 guineas.

Applications for enrolment should be addressed to Director of Postgraduate Studies, Surgeons' Hall, Edinburgh, 8. Applicants for courses, except general practitioners, should supply particulars of qualifications and postgraduate experience.

McGILL UNIVERSITY, Montreal

A limited number of openings for training are available to candidates in the Department of Psychiatry. Applicants must have graduated from an acceptable medical school and have a general internship. The four-year course is designed primarily to prepare individuals to enter the field of general hospital, community or university psychiatry, or to prepare them for research work in this field. Credit may be allowed for previous training. Shorter periods of instruction may be arranged as well as instruction in special fields. Those accepted for training are assigned to one of the six university teaching areas in Montreal. These positions carry with them board and lodging, plus an honorarium ranging from \$25.00 to \$50.00 a month, which is the basic stipend. In several of the centres additional emoluments of a further \$1,800 a year are available. Applicants should write to the Chairman of the Department of Psychiatry, McGill University, Montreal, Canada. Interviews with a staff member will be arranged in London. The opening date for the new session is July 1, 1953, and applications are being currently considered. (6213)

A Major Advance in Cholecystography

The introduction of 'Telepaque'*, a new oral cholecystographic medium, brings with it greater ease of diagnosis of gall-bladder disease and greater comfort for the patient. 'Telepaque' has greater radio-opacity than pheniodol, due to its higher iodine content; fewer re-takes are necessary; the incidence of side-effects is minimal.

* 3-(3-amino-2,4,6-triiodophenyl)-2-ethylpropanoic acid.

'Telepaque' is available in tablets of 0.5 g. in envelopes containing six tablets (adult dose), in boxes of 6 envelopes.
