

The answer to a sick-room problem

Many patients dislike glucose. It is apt to cloy the palate. It can even be nauseating. But not so LUCOZADE, the sparkling glucose drink which is so delicious and refreshing that it is taken readily by the most fastidious patient. And, once tasted, LUCOZADE is never refused. It is the perfect answer to a sick-room problem.

Laxatives for Children

To aid the Physician in choosing a laxative for children, we give the chief characteristics of Andrews. The dosage is easily adjusted according to age. Andrews is pleasant tasting, and children accept it readily. Its laxative action is mild, and is due to the presence of magnesium sulphate and other salts in balanced proportion which increase the fluid content of the bowel by osmotic action and so lead to easy non-

gripping evacuation. Andrews has a soothing effect on the stomach, stimulates the bile-flow and generally aids digestive processes. It is also useful as a gastric sedative in bilious attacks. Andrews has no costive reaction when discontinued.

Active constituents:

Tartaric Acid	..	24.600%
Sodium Bicarbonate	..	25.142%
Magnesium Sulphate	..	19.000%
(B.P.C. Exsicc.)		
Sugar	..	31.250%

SULPENIN

Trade Mark

Combined Oral Penicillin and Sulphonamide Therapy

By utilising the synergistic action known to exist between penicillin and the sulphonamides the antibacterial range is increased and the tendency for the bacteria to develop mutant strains resistant to one or other of the drugs is reduced.

Sulpenin, containing penicillin, sulphadiazine and sulphamerazine in balanced dosage, provides a convenient means of applying combined therapy in the treatment of many infections due to susceptible micro-organisms. It is of value also when laboratory diagnosis is impracticable or impossible and the sensitivity of the organisms cannot be determined.

Each tablet contains, Crystalline Penicillin G (potassium salt) 100,000 units, Sulphadiazine 0.25 gramme and Sulphamerazine 0.25 gramme.

Tubes of 10 and Bottles of 100 tablets.

EMOTIONS

EMOTIONAL DISTURBANCE...

A close association has been shown to exist between certain emotional disturbances and changes in gastric function. Increased acid secretion has been observed to follow emotional reactions of a combative nature and the importance of controlling gastric acidity in the management of peptic ulcer is widely recognised.

'Aludrox' Amphoteric Gel, buffers gastric acid to a pH of 3.5 to 4.0, at the same time providing a protective gel barrier over the surface of the ulcer. Healing is thus able to proceed whilst the risk of alkalosis is avoided and normal digestion is unimpaired.

'ALUDROX'
Trade Mark

'ALUDROX' is available in two forms: as an amphoteric gel (consisting of Aluminium Hydroxide Gel B.P.C. suitably flavoured and preserved) in 6 oz. and 12 oz. bottles and as tablets (each tablet containing dried Aluminium Hydroxide Gel. B.P.C. 13 gr.) in boxes of 60.

'DRINAMYL'

A balanced combination of
'Dexedrine' and amylobarbitone

Samples and further information are available on request. 'Drinamyl' is available on prescription only, in bottles of 25 tablets — each tablet contains 'Dexedrine' (dextro-amphetamine sulphate) 5 mg. and amylobarbitone (gr. $\frac{1}{2}$) 32 mg.

'Drinamyl' ameliorates mood and relieves inner tension in cases of mental and emotional distress, particularly where anxiety is a factor. It is invaluable in the treatment of mild neuroses, and for the alleviation of somatic symptoms that are without organic basis. 'Drinamyl' relieves the symptoms of depression and anxiety, stimulating mental activity, and restoring optimism and cheerfulness, and an interest in life.

Inject SECLOMYCIN

... and you inject sodium and procaine penicillins and streptomycin simultaneously. This is precisely the attack called for to combat infections of mixed bacterial origin that fail to respond fully to penicillin or streptomycin alone—notably infections of the urinary tract, peritonitis and infected wounds.

Inject ESTOMYCIN

... and you inject both the 'lung selective' penicillin ester—penethamate hydriodide—and streptomycin. Here is a combined attack that is highly effective against mixed infections of the lung—typically, bronchitis (both acute and chronic), bronchiectasis, pleurisy, pulmonary abscess and pulmonary tuberculosis complicated by secondary infection.

Both preparations are issued in dry form for aqueous injection, and are available in 'single-dose' vials; Estomycin is also available in a special 'single-dose' vial for infants.

For the 'bilious' or 'liverish' patient

DEHYDROCHOLIN B.D.H. is the most active and least toxic of the bile acids. Since it is highly effective in promoting the secretion of bile and therefore aids the digestion and absorption of foodstuffs, particularly fats, it is indicated particularly for the treatment of 'bilious' or 'liverish' conditions.

Dehydrocholin B.D.H. is also useful in establishing normal bowel action in patients with a deficiency of bile and in patients needing mild peristaltic stimulation. Dosage of three tablets three times a day is recommended.

DEHYDROCHOLIN B.D.H.

Tablets for oral administration, each containing 0.25 gramme in bottles of 20 at 4/1 and 100 at 17/7. Solution for injection—ampoules containing 2 gramme of sodium dehydrocholate in 10 ml. Box of 3 ampoules 18/11; box of 25 at 74/3. Prices in Great Britain to the Medical Profession.

Deferment of recruitment for "R" practitioners (i.e., practitioners liable for call-up under the National Service Acts) is granted at the discretion of the Central Medical Recruitment Committee and (in Scotland) the Scottish Central Medical Recruitment Committee. The Committees normally allow an "R" practitioner to hold a First House Officer post (N.H.S. salary £350 per annum) provided that it commences within three months of the end of his deferment by the Ministry of Labour as a whole-time medical student; and a Second House Officer post (N.H.S. salary £400 per annum) provided that it is secured before the end of his First House Officer post and commences within one month thereafter.

An "R" practitioner requires the special written permission of the C.M.R.C. or (in Scotland) the Scottish C.M.R.C. to proceed to a Third House Officer post (£450 per annum).

Under present arrangements in England and Wales the C.M.R.C. normally allows an "R" practitioner to proceed directly from a Second House Officer post to a Senior House Officer post (£670 per annum) for one year, but this practice will be discontinued on January 1, 1953. An "R" practitioner who completes six months in a Second House Officer post on or after January 1, 1953, will require the special written permission of the C.M.R.C. or Scottish C.M.R.C. to proceed to any further post.

Availability of Vitamins in Yeast

Deficiencies of single factors of the Vitamin B Group do not occur. Accordingly, even if a deficiency condition appears to result from the lack of an individual factor of the group and it is considered necessary to give intensive treatment with this factor, *the entire Vitamin B complex should always be administered concurrently.*

It is, however, extremely important, in view of suggestions in recent publications, that the vehicle selected as a source of the entire B Complex does not withhold its vitamin content from the patient.

Human experiments show that the rich, natural vitamin potency of Aluzyme is totally available to the human system.
