

## NEW AND RELIABLE

### FORM OF ORAL PENICILLIN

'Dibencil' Oral Suspension contains the newly developed salt of penicillin, N: N'-dibenzylethylenediamine dipenicillin G, which is practically insoluble and when administered in adequate dosage, produces effective and prolonged blood levels. It is particularly suitable for oral penicillin therapy on account of its stability and freedom from the taste of penicillin.

'Dibencil' Oral Suspension contains 300,000 units of penicillin in one large teaspoonful (5 c.c.) and is a pleasantly flavoured preparation ready for use. The Suspension is suitable for both hospital and general practice, it is well-tolerated and is readily accepted by adults and children of all ages.

#### ● Efficacy

'Dibencil' Oral Suspension produces clinically effective blood levels.

#### ● Convenience

'Dibencil' Oral Suspension requires no preliminary preparation and is ready for use.

#### ● Stability

'Dibencil' Oral Suspension retains its potency at ordinary room temperatures not exceeding 77°F. (25°C.) for at least 18 months. Full potency is thus ensured during use.

## Sexual Behavior in the Human Female

By Professor ALFRED KINSEY, and Associates on the Staff of the Institute for Sex Research, Indiana University

846 pages

179 tables

A scientific study of sexual behaviour in American women of various ages, educational levels, religious adherences, parental backgrounds. The material is based on data accumulated over the past 15 years in personal interviews with 5,940 women; in research carried on in various areas of science; and in exhaustive study of the literature in many fields.

Data is presented on the incidence and frequency with which women participate in the various types of sexual activity. Summarized comparisons with male behaviour are made throughout.

The book analyses the anatomical and physiological background of sexual response in female and in male. Included here is a considerable amount of previously unavailable material which is of great interest and value to the physician. Much original information is offered on the significance of psychological factors in sexual response—especially on their comparative importance in female and male. The relation of the so-called sex hormones to sexual response is critically reassessed. Neural factors in sexual response are considered. Concepts such as orgasm and frigidity are presented in a new light.

This book will prove tremendously useful to the physician in the management of the many problems of sexual maladjustment which he sees among his female patients.

IN MEDICINE**

By F. BICKNELL, D.M., M.R.C.P.,

and F. PRESCOTT, M.Sc., Ph.D., M.R.C.P. Clinical Research Director, Wellcome Research Institute

When this book first appeared eleven years ago it was rapidly recognized as the standard work of reference on the subject. The large volume of literature on the vitamins in the last decade has necessitated a virtual re-writing of the text for the third edition. Much new material, particularly on the vitamin B complex, and new illustrations, have been incorporated.

As before, each vitamin has been considered under the headings: history, chemistry, sources, physiology, pharmacology, human requirements, deficiency diseases, methods used for detecting deficiencies, and clinical applications. The emphasis is on the human rather than the animal aspect. The book is well documented and contains approximately 5,070 references and 245 illustrations.

Local reaction will not occur with these preparations as they contain no added protein materials and have been purified by repeated recrystallisation. They are all characterised by prolonged action. Extensive clinical trials in Denmark and in Great Britain have shown that with these new insulins it is possible to adjust not only mild but also the great majority of severe cases of diabetes

on one daily injection. Insulin Novo Lente will be used most frequently, as one daily injection of it will stabilize approximately 90% of all insulin-consuming diabetics. In other cases Semilente or Ultralente can be mixed with Lente, or used alone—Semilente where the onset of action of Lente is too delayed, Ultralente where its duration of action is not sufficiently prolonged.

## Peptic Ulceration

... all duodenal ulcer patients experienced symptomatic relief and of these ten claimed relief after 1 day; four after 2 days; and two after 3 days.

... two patients with a gastric ulcer experienced relief of symptoms 2 to 3 days after starting therapy whilst the patients who did not improve had large eroding ulcers and were later operated upon.

... x-rays were taken 10 and 20 days after the patients' admission. Those receiving TABNET showed evidence of healing 10 days after commencing treatment. After 20 days the radiological appearances showed that the ulcers had healed in all cases except the two referred to above.

... in addition to these control cases twenty ambulatory patients received TABNET therapy and became symptom free within a short period.

To the medical profession's intelligent watchfulness, during pre- and post-natal care, must be attributed the recent remarkable reduction in child and maternal morbidity and mortality.

Increased attention to providing adequate nutritional reserves, prevention and treatment of maternal infection and watchfulness for the blood dyscrasias of pregnancy have all been contributing factors to the firmer foundation of health which to-day's maternal and infant population enjoy.

Because pregnancy is a period of increased demands upon the maternal organism . . . of heightened metabolism . . . of an augmented and constant drain upon tissue and hormonal reserves . . . it has become an integral part of the medical management of the obstetric patient to provide *supplementary vitamins and minerals throughout the whole period of gestation*.

Prenatal Capsules *Lederle* are a valuable and important adjunct to dietary management in the over-all regimen of the obstetric patient. They provide optimal reserves of minerals and vitamins, and assure adequate intake of these essential dietary factors in definitely known quantities.

A new basic ether of morphine, Pholcodine (morpholinylethylmorphine), has been shown to have a powerful action in depressing the cough reflex.

Pholcodine, which has a sedative action superior to that of codeine while being decidedly less toxic, is employed as the active ingredient in a new cough linctus to which the name ETHNINE has been given.

The advantages of ETHNINE lie in its effectiveness with low toxicity, and its freedom from side-effects such as constipation or digestive upset.

ETHNINE is well tolerated by children and adults and is suitable for administration whenever a cough sedative is considered advisable.

'Pro-Banthīne' is parallel in action to its widely reported forerunner 'Banthīne' but is 2 to 5 times more potent and exhibits greatly reduced side-effects. A true anticholinergic, 'Pro-Banthīne' promotes the healing of peptic ulceration by blocking excessive vagal stimulation. The result of this action is a consistent decrease in gastric hypermotility and usually a lowering of the acidity of gastric secretions. 'Pro-Banthīne' acts as an anticholinergic drug through its ability to inhibit the transmission of neural stimuli at the sites where acetylcholine serves to transmit the impulse. These sites are the parasympathetic ganglia and effectors and the sympathetic ganglia.

ADEQUATE ORAL  
AMINOPHYLLINE

The tables below show blood levels obtained after a single dose of aminophylline parenterally and a single dose of oral Theodrox. The blood levels produced by oral Theodrox compare favourably with those produced by parenteral administration of aminophylline.

\* Micrograms of theophylline per 100 c.c. of blood.

Prior to the introduction of Theodrox the usefulness of oral aminophylline has been limited by failure to obtain adequate blood levels because of gastric intolerance. With Theodrox this difficulty is overcome and effective oral dosage is entirely feasible. Each tablet of Theodrox contains 3 gr. of aminophylline B.P. with 4 gr. of dried aluminium hydroxide gel, B.P.C.

In the form of Theodrox, aminophylline can be administered orally to produce results comparable with intravenous or intramuscular dosage, yet without the inconvenience and danger of parenteral administration.

Theodrox is supplied in containers of 25, 100 and 1,000 tablets.

Theodrox is also available as Theodrox with Phenobarbitone, each tablet containing in addition  $\frac{1}{8}$  gr. of Phenobarbitone B.P.

## *Combined Oral Penicillin and Sulphonamide Therapy*

By utilising the synergistic action known to exist between penicillin and the sulphonamides the antibacterial range is increased and the tendency for the bacteria to develop mutant strains resistant to one or other of the drugs is reduced.

Sulpenin, containing penicillin, sulphadiazine and sulphamerazine in balanced dosage, provides a convenient means of applying combined therapy in the treatment of many infections due to susceptible micro-organisms. It is of value also when laboratory diagnosis is impracticable or impossible and the sensitivity of the organisms cannot be determined.

Each tablet contains, Crystalline Penicillin G (potassium salt) 100,000 units, Sulphadiazine 0.25 grammes and Sulphamerazine 0.25 grammes.

Deferment of recruitment for fully registered "R" practitioners (i.e., fully registered practitioners liable for call-up under the National Service Acts) is granted at the discretion of the Central Medical Recruitment Committee and (in Scotland) the Scottish Central Medical Recruitment Committee. The Committees normally allow a fully registered "R" practitioner to hold a First House Officer post (N.H.S. salary £350 per annum) provided that it commences within three months of the end of his deferment by the Ministry of Labour and National Service as a whole-time medical student; and a Second House Officer post (N.H.S. salary £400 per annum) provided that it is secured before the end of his First House Officer post and commences within one month thereafter.

An "R" practitioner requires the special written permission of the C.M.R.C. or (in Scotland) the Scottish C.M.R.C. to proceed to any further post.

The position of provisionally registered "R" practitioners has been made clear in a notice sent to them by the University Joint Recruiting Boards.

*New!  
for Babes*

Carter's of Coleford, makers of Ribena Blackcurrant Juice, announce a new Vitamin C syrup—ROSENA—which has been especially prepared for children from two weeks to ten years old. Rosena is a balanced blend of pure orange juice and rose hip extract. The soft, pleasant flavour of the rose hip has been used to stabilise the orange juice at an acidity which makes it most pleasant and acceptable to children of all ages. It does not cause stomach or bowel trouble. By reason of its high vitamin content (not less than 56 mgms. of Vitamin C per fluid oz.) Rosena is equal in Vitamin C activity to Ministry of Food Orange Juice and National Rose Hip Syrup. It also contains three natural sugars, which are nutritionally valuable.

These comprise glucose, fruit sugar and cane sugar. In addition, a further ten per cent of pure glucose has been added. It costs only 2/10d. a bottle and lasts baby a whole month. From Chemists only.
