in the
control of
epilepsy

'Mysoline', an entirely new anticonvulsant, was introduced in 1952 following publication of the results obtained in long-standing cases of major epilepsy which had resisted treatment with other established drugs. Since that time clinical evaluation in numerous important neurological centres in Great Britain and overseas has amply confirmed the earlier trials. These investigations have all shown that 'Mysoline' possesses a number of notable features—ability to control the grand mal attack, low toxicity and freedom from hypnotic effect. In addition, a beneficial effect on general behaviour, performance and sociability has been observed.

Preliminary studies with 'Mysoline' in psychomotor epilepsy are extremely encouraging, and there is evidence that it may also be of use in petit mal.

'Mysoline' tablets (0.25 gramme) are now available in packings of 100 and 1,000.

A new and logical therapy for Rheumatic conditions

Water-soluble esters of salicylic, p-aminobenzoic and nicotinic acids, that readily pass the skin barrier

The local treatment of rheumatic conditions has hitherto presented certain difficulties; drugs which penetrated the skin often caused intense irritation and their use was of doubtful value.

Transvasin, a new preparation developed by Hamol S. A., our Swiss associates, and now available for prescription in this country, contains esters of salicylic, p-aminobenzoic and nicotinic acids. These esters, being both water- and fat-soluble, readily pass the skin barrier in therapeutic quantities without causing irritation, and enable an adequate concentration of the drugs to be built up where they are needed. Transvasin not only induces vasodilation of the skin with a superficial erythema but also brings about a deep hyperaemia of the underlying tissues.

Salicylic acid tetrahydro-furfuryl-ester	14%
Nicotinic acid ethyl-ester	2%
Nicotinic acid n-hexyl-ester	2%
p-Aminobenzoic acid ethyl-ester	2%
Water-miscible cream base ad	100%

Transvasin is not advertised to the public. It is available in 1 oz. tubes at 3/4d. plus 7½d. P.T., and is obtainable on Form E.C.10.

unified front

Sulfa-Sugracillin 250M — a potent combination of penicillin and three sulphonamides — presents a unified front against sulpha- and penicillin-sensitive organisms. Sulfa-Sugracillin is practical for therapy because in addition to being promptly effective it is pleasant-tasting and readily accepted by the patient.

When oral penicillin alone is deemed sufficient, the recommended product is Sugracillin 250M, which is equally palatable.

AUREOMYCIN is a broad-spectrum antibiotic that has been shown to be effective in a wide variety of infections of bacterial, rickettsial, protozoal, large viral and unknown aetiology.

Oral administration of AUREOMYCIN results in a highly specific effect on intestinal lesions, and an inhibitory action on pathogenic bacterial flora in the intestine. AUREOMYCIN readily passes into the blood-stream and diffuses rapidly into all the tissues and fluids of the body. AUREOMYCIN is an efficient amoebicide, possesses a powerful action on all varieties of brucella organisms and is especially valuable in the therapy and prophylaxis of subacute bacterial endocarditis. The post-cholecystectomy syndrome may respond to AUREOMYCIN, which appears in therapeutic concentration in the bile. Reports have shown that it is useful in infectious mononucleosis. AUREOMYCIN is recognised as the drug of choice in viral influenza, inducing impressive symptomatic improvement, regression of fever and clearing of pulmonary involvement within 36 hours. Q-fever, of world-wide occurrence and resistant to both penicillin and the sulphonamides, is effectively treated with AUREOMYCIN.

AUREOMYCIN has also proved its effectiveness in anthrax, "cat-scratch disease," dysentery, erysipelas, granuloma inguinale, leprosy, leptospirosis, lymphogranuloma venereum, Newcastle disease, nonspecific pericarditis, plague, psittacosis, radiation sickness, rat-bite fever (Sodoku), relapsing fever, respiratory infections, rickettsialpox, septicæmia, tick-borne rickettsioses, toxoplasmosis, tularemia, typhus, and urinary infections.

Throughout the world, in every field of medicine, AUREOMYCIN is recognised as the broad-spectrum antibiotic of choice.

For children, ETHNINE is indicated whenever a cough sedative is considered advisable particularly in the treatment of whooping cough, irritation of the upper respiratory tract, and the cough associated with enlarged tonsils and adenoids before surgical measures are taken.

The sedative action of ETHNINE is particularly useful when it is desired to ensure a restful night's sleep uninterrupted by paroxysms of coughing.

Treatment of the Streptococcal Throat

'PONDETS' Penicillin are a new and ingenious vehicle for local oral penicillin therapy that combine the striking advantages of extreme palatability with prolonged action. Each 'Pondet' contains 5,000 international units of crystalline potassium penicillin-G in a delicious hard, fruit, toffee-like base that completely masks the bitter taste of penicillin.

Because of the nature of their hard base, 'Pondets' dissolve slowly and uniformly, supplying an uninterrupted high concentration of penicillin to infected areas of the oro-pharyngeal mucosa.

INDICATED in minor superficial oral infections due to penicillin sensitive organisms ranging from the 'Streptococcal Throat' to the less common Vincent's infection and recommended for routine prophylactic use following Tonsillectomy.

Individually wrapped in bottles of 20.

Children accept 'Pondets' as readily as a sweet, and they are particularly useful in controlling throat infections in juvenile communities.

 - (3) A valuable calming influence
 - (4) Prompt relief of headaches, dizziness and other symptoms
- The hypotensive action of Rauwiloid is slow in developing, and may not attain its maximum for weeks or even months. However, the ability to lower blood pressure is limited, regardless of dose.
- Rauwiloid is not a ganglionic or adrenergic blocking agent and does not interfere with postural reflexes. Even at several times the therapeutic dosage, undesirable side effects are rarely seen with Rauwiloid.
- Initial dose 4 mg. (2 tablets) once daily until desired effect is achieved; thereafter one tablet daily.

- The calming influence of Rauwiloid enhances tolerance for Veriloid, making it possible for patients to obtain a significant reduction of blood pressure from lower doses of Veriloid.
- The average dose of Rauwiloid + Veriloid is one tablet three times daily after meals, at intervals of not less than four hours. Each tablet contains 1 mg. of Rauwiloid and 3 mg. of Veriloid.*

CIDAL

**THE TOILET SOAP
THAT CONTAINS**

2% HEXACHLOROPHENE

Because CIDAL soap contains Hexachlorophene (G-11) it has remarkable germicidal properties which help it to purify the skin as no ordinary toilet soap can do.

CIDAL attacks bacteria that settle in pores and folds of skin, and forms an anti-bacteria barrier which gives protection between washes. By destroying the bacteria that ferment perspiration, CIDAL eliminates unpleasant body odours at source.

CIDAL is useful in treating all skin ailments where soap and water are part of the therapy. Regular use helps to reduce the incidence of cellulitis and folliculitis, and prevents secondary infections of minor cuts and abrasions.

CIDAL CREAM SHAMPOO also contains Hexachlorophene and shares CIDAL soap's germicidal powers. It protects hair follicles against infection by staphylococci and is helpful in treating dandruff.
