Many specialists have reported remarkable success in the treatment of rheumatic conditions with BUTAZOLIDIN. This success has been even more marked by the use of the new half-strength tablets, which enable even distribution of dosage over twenty-four hours to be maintained. The greater control of blood levels attained thereby minimises the possibility of toxic effects. BUTAZOLIDIN tablets are now supplied with improved coating to facilitate disintegration and absorption, thus increasing their therapeutic efficacy in the treatment of Rheumatoid Arthritis, Muscular Rheumatism, Bursitis, Gout, Osteoarthritis and Ankylosing Spondylitis.

INTRODUCE

NOBECUTANE

A NEW PLASTIC WOUND DRESSING

(See Brit. med. J. 1954. 2.17)

NOBECUTANE consists of an acrylic resin dissolved in a mixture of acetic esters. When applied to the dry skin the solvent evaporates leaving an elastic, transparent, and adhesive film.

★ ★ ★

NOBECUTANE has many advantages over conventional dressings. It is non-irritating, transparent, tough, pliable and durable and can be applied over joints where some degree of mobility is required.

★ ★ ★

NOBECUTANE is impervious to bacteria but permeable to air and water vapour and allows normal aqueous exhalation of the skin to escape and no maceration of the skin occurs.

★ ★ ★

NOBECUTANE is economical in use and results in a saving of at least 20% over the cost of conventional dressings. In addition it is welcomed by nursing staff who find it effects a considerable amount of saving in time.

★ ★ ★

NOBECUTANE is available to *hospitals only* in bottles of 250 ml. at a price of 17/6 per bottle. Each bottle contains adequate material for the dressing of approximately sixty to seventy surgical wounds.

for the rapid relief of pain

The distress caused by the piercing, stabbing pains of neuralgia is quickly relieved by the rapid, smooth, analgesic action of HYPON TABLETS, enabling the practitioner to prescribe a safe means of meeting the patient's need. Menstrual pain is also effectively alleviated. Where the cause of distress is of a more chronic nature, as in rheumatism and sciatica, the adverse

effects of prolonged medication with codeine and salicylic therapy are eliminated by the inclusion in the formula of caffeine and phenolphthalein. HYPON TABLETS are already widely prescribed by members of the profession for their speedy and safe action with the almost complete elimination of gastric upset. Parallel with the relief from pain, febrile states are effectively reduced in conditions such as influenza, coryza and tonsillitis.

Ointment

Formula: 1-(β -dimethylaminoethoxy)-3-n-butylisoquinoline monohydrochloride
0.5% w/v in an oil-in-water emulsion base.

Here is a new topical anaesthetic, chemically unrelated to the 'caine' group, with a remarkably low index of sensitization. When the patient's symptoms of itching, burning, and pain are hindering progress, when they are causing sleeplessness, or when scratching is leading to secondary infection of the lesions, this highly effective antipruritic may often provide a valuable support to treatment.

TABILLIN in the new 'Foil-Pac'

This new method of packing protects each tablet until used — a most important consideration in oral penicillin therapy, which is now established as a satisfactory method of systemic administration.

Tabillin offers these advantages:

- 1 Tabillins, being individually sealed, are protected against contamination and loss of potency.
- 2 Each dose of Tabillin is protected until required — therefore superior to liquid preparations.
- 3 Any quantity of Tabillin can be prescribed and dispensed without losing the advantages of individually-sealed protection. Wastage is eliminated.
- 4 Tabillins are supplied in four strengths to facilitate convenient dosage schedules.
- 5 'Foil-Pac' Tabillins are economical. Available at no greater cost than unwrapped tablets.

A New development providing **CONTROLLED** antacid therapy

Prodexin is a new product containing aluminium glycinate, and belongs to the buffer group of antacids. It depends for its action upon the slow release, on hydrolysis, of active aluminium hydroxide gel and glycine (amino acetic acid). Glycine rapidly raises the pH to 2, sparing the aluminium gel for the later stage of raising it into the "safe zone" of pH 3.5 to 4.5. Prodexin maintains an equable gastric environment for long periods without alkalisiation.

Prodexin provides a convenient, economical and safe treatment for HYPERACIDITY and PEPTIC ULCER.

The tablets, sucked one at a time, maintain the pH of the stomach contents within the "safe zone" for up to two hours. With Prodexin there is no risk of acid rebound or alkalosis. Prodexin tablets are pleasant to suck and they do not form gritty particles in the mouth or give rise to constipation.

PRODEXIN

Each tablet contains:—

Aluminium glycinate.....0.9 gramme.
(dihydroxy aluminium aminoacetate)

Light magnesium carbonate.....0.1 gramme.

The basic N.H.S. cost of treatment at the rate of 6 Prodexin tablets daily is 8½d.

"I saw PYREX Precision Bore tubing being re-drawn in the PYREX works."

"The ordinary tubing is carried over a steel mould (a mandril they call it) and is re-heated in the process. It comes out the other side dead accurate to size and shape. And that's the tubing they use for these hypodermic syringes. I'm told it is accurate to four points of decimals."

NEW AND ORIGINAL ORGANIC-IRON TABLET
FERROMYN
(Ferrous Succinate)

***the latest and most significant advance
towards ideal oral iron therapy***

FERROMYN is an original and logical approach to the problem of iron absorption and utilisation in the treatment of hypochromic anæmias and brings oral iron therapy a step nearer the ideal.

This new iron preparation presents Ferrous Succinate, a bivalent iron salt prepared from succinic acid, which, together with glycine is essential for the synthesis in the red bone marrow of a porphyrin (haem) containing iron.*

Normal Hb. and serum iron levels were demonstrated over an average period of 24 days treatment with a group of hypochromic anæmia

patients with an average initial haemoglobin of 60%.

The controlled clinical trials with Ferromyn show an iron utilisation factor of 42% as compared with 14% Ferrous Sulphate and 28% Ferrous Gluconate.

This response was obtained with the low total average dosage of 2,604 mgm. available iron.

In comparison, the controlled group treated with Ferrous Sulphate required 42 days with an average dosage of 7,568 mgm. available iron to reach the same Hb. and serum-iron value.

SENSITIVITY AND COMMON SENSE

Hayfever and allergic rhinitis are often of complex aetiology and tend to persist in spite of the most rigorous treatment. In those cases, however, in which nasal obstruction is the most troublesome symptom, even a measure of relief is welcomed by the patient. Discriminate use of the 'Neophryn'* Spray helps to restore normal nasal function and is probably the best short-term local treatment. Principal advantages are: rapid and prolonged vasoconstriction without secondary congestion, virtual freedom from side-effects, and simple administration by a convenient plastic atomiser.
